Gary,

I run Pactor-2, so I need to run it in SSB mode. I also have a Clover setup which I have not used for a while, but I intend using it as soon as I get a switching system so I can switch between the two modes without changing connectors.

73 de VE7MDL ....Erik.

I have a beautiful Kenwood TS-850SAT HF radio with tuner (AT), the internal memory board installed. hand mike, manuals, original box.. works great. Non-smoker. Kept under cover.

I have too many radios, so.. will deliver in the SF Bay area, or pick up. Will ship if needed.

Thanks,

Barry K6ZA 925-947-1776

4. Re: Shipments to and from Canada - definition

Newsgroup: rec.radio.amateur.equipment
Date: 1998-11-01 00:00:00 UTC
From: Michael Black <blackm00@CAM.ORG>
Message-ID: <Pine.GSO.3.94.981101224042.22070A-100000@Ocean.CAM.ORG>
Source record: 127192

I don't recall the exact details, but at some point a special exemption
was made for amateur radio equipment when brought into Canada. The duty
that was charged on it before that (I don't know what it got classified
as) was quite stiff. There was campaigning for quite some time about
this. Eventually, something happened to make it less of a burden. I
can't remember the details; it was either a complete exemption from duty
or a special classification for amateur radio equipment that was not
nearly as high a rate of duty. I never saw the exact wording so I don't
know what fit into the classification of "amateur radio equipment". I
can't even remember when the change occurred; it must have been before
the free trade agreement. I thought NAFTA only applied to items made
in the US, and a lot of amateur radio equipment is made elsewhere, so
the special classification would probbly be important.

I'd suggest anyone who's interested in this going to the Radio Amateurs
of Canada and asking them. They've got a website at
http://www.rac.ca
and either there will be information there or you can find someone
to contact and ask.

14. Re: What ham radio is today.

Newsgroup: rec.radio.amateur.equipment
Date: 1998-11-01 00:00:00 UTC
From: Freeland <Freeland@chickasaw.com>
Message-ID: <_72%1.289$85.3579701@news.goodnet.com>
Source record: 127242
Cross-posted to: rec.radio.amateur.antenna,rec.radio.amateur.boatanchors,rec.radio.amateur.digital.misc,rec.radio.amateur.dx,rec.radio.amateur.equipment,rec.radio.amateur.homebrew,rec.radio.amateur.misc,rec.radio.amateur.policy,rec.radio.amateur.space

Perhaps I'm disqualififed from
talking about the "good old
days" (I'm less than 60 years
old, never had a QSO with
HPM, and got my license as one
of those newfangled
Conditionals.

My "good old days" started in
the early 60's, just 35 years
ago, but here is what I
remember.

.... hams didn't bicker with
each other about who was more
"deserving" than another.
Nobody got a special deal
because
they could beep faster or
remember more electrical
formulae
than someone else. I got my
Extra in 1963, well before
disincentive licensing, and it
was simply just another
personal
accomplishment, and did not
"elevate" me above other hams.
We
all shared the same spectrum,
worked together to solve the
same
problems, competed in
contests, trouble-shot each
others radios,
and generally had fun
together. If you forgot the
numbers for
the dipole formula, it was OK
to ask someone else. If your
Morse speed was 10WPM the
speedier guys would slow down
for you,

not QSY to some specially
reserved band segment. The
one or two
"old timers" on 75 meters who
didn't like newcomers ("No
lids, no
kids, not space cadets") were
universally looked down on as
poor
examples of what a ham ought
to act like. The Novice bands
were
a "cacaphony of exhuberance"
to steal a term that K1ZZ used
in
a meeting yesterday here in
Minneapolis. Old hands were on
those
Novice bands also -- it was
not unusual to hear W4KFC or
W5ZD
patiently working WN4KKN or
WV2CNL -- nobody remarked that
it
was "nice" of them to do
that -- it was just part of
being a
good ham. The notion that you
had "earned" your license
never
occured to anyone -- we were
just excitedly "playing in the
ether", and there was no
distinction on the air between
Extra,
Advanced, General, or
Conditional -- elitist special
callsign
formats to celebrate the fine
granulations of your testing
skills
had not been invented.

Today we are sliced and diced
into 6 different classes,
carefully
divided into our own special
frequency segments, and Lord
protect
the Extra who suggests that a

new Technician, who didn't
pass his
exam in front of a bored and
stern FCC clerk, might have
something
to contribute to our beloved
Amateur Radio service.

I respectfully propose that
all current six license
classes be
scrapped and replaced by two
new classes "Beginner", and
"Helper
of Beginners".

Since you are already familiar with tuning-up tube rigs, I would recommend a Kenwood TS-530S or TS-830S. Both are the same size (fairly compact for tube final transceivers) and both have digital readout and WARC bands. The TS-830S is the better of the two with really good specs and a lot of receiver features for it's day. I have the 530S and it is a really nice radio. If you aren't interested in using the WARC bands and just want a cheap digital radio, a Kenwood TS-120S solid-state mobile would serve nicely. It all depends on how much money you want to spend.....Mark KB4AEP

I use the STB 4COM card with reasonable success.
This was an under $100 card that provides four serial ports.
You can use the standard I/O and IRQ with these, or select
four new settings (from a limited group). If you are careful,
you can use your standard two from the PC and four from
here for six serial ports. It can also do LPT, but I never fooled
with that. Never had a need for more than one LPT. I would
use a switch if I did.

Harry!!

I have one "New In the Box" GRC-109 set, as shipped to the CIA field units. It has BOTH Power supplies, all manuals, all accessories (Spare parts kit, in the waterproof parts box), antenna(s), crystals, spare tubes, wrenches, knife, world-wide electrical socket adapters, screw-in bulb socket adapter, ear phones, hand crank generator cables, power extension cables, and etc., right from the checklist in the operators manual. Included, but not in the manual is a code key with a knee mount. Also ncluded is the rare (hard to find) GRA-71 code burst/encryptor.

The only item not included is the GN-43 hand crank generator. I know where I can get a new one, however, for a reasonable price, I just havn't obtained it yet, as I was going to pick it up in person (select & test) on the way to Idaho for Thanks-giving. This was a rare and seldom used (by the Green Berets) accessory and was not (that I know of) included with the CIA sets, at least I never saw one in 10 years.

See website(s) "http://hypertools.com/clandest.html"
and/or "http://telalink.net/~badger/millist/files/GRC109_RS-1 info.txt

All above items are New, in the box, condition 10 out of 10, 100% operational, recently depot checked, lubricated, tuned, tubes checked, codeburst tapes replaced with new, etc..

This is a museum grade package and is only for sale, as I just got another exact replica set in a trade with a major military museum. I will accept reasonable offers, though I should put the thing on EBAY and have some poor sucker shuck out more shekels than I'd have the ethics to take. I have one bidder at present, but feel that I should at least try to get the $$$ which I paid for it (in a fit of panic, when I had a few $$ burning a hole in my pocket.). It needs a good and appreciative home. These things saved my bacon in various nefarious areas of the world and mine sits proudly on my "field desk" in my

spare bedroom. I fired it up the other day and worked about 6 states and 4 countries on 15 M feeding a Bilal "isotron" antenna, bolted to my pole lamp by my desk. The receiver has a wide bandwidth, so you have to search for a wide spot when the bands are busy. There is such a rush to listen to a tube receiver. They just ain't the same. If it is transmitting some where in the world, you hear it. The transmitter is clean, but I can recognize the sound of one, as compared to any other rig. This comes, I guess from years of listening. Last year I worked a fellow in Austrailia who was calling CQ with that unmistakeable little signal, probably the first 109 to 109 QSO in 20 years.

I have not experienced any of the problems you mention with the 1.2GHz
module. I have even set up and run the fast scan interface with no
interference or power fades.

I have a Kenwood TS-930S AT with a final section cooling fan that vibrates noisily. I've tried lubricating, but the motor seems pretty well sealed. I guess I'll have to get a new fan. Can anybody give me the dope on how to order a new fan from Kenwood? Thanks.

From: Joe Arnold <k5joe@flash.net>
Message-ID: <363BBDCF.FE4B17B0@flash.net>
Source record: 127259

Since I have owned scores and scores of radios I can recomend these.

Best of the Cheapest: Ten-Tec Omini C, or D Solid state rig, usualy
under $ 300.00. Quietest recieve noise floor of the cheapest.

The best cheapest radio with a tuner and keyer built in is the
Icom 737, they are around 600-695.

The Kenwood 440 has a built in tuner but it and the 430 had lots of
problems with the PLL comming unlocked, (they would change bands while
just sitting there recieving) the 440 with tuner is about $ 550-600.
The 430 general coverage Kenwood does not have a built in tuner but it
is going for about $ 450.00.

Best of the cheaper tube types in my opinion would be the
Yaesu 101-ZD--------about $ 350.00 digital display
Kenwood TS-830------about $ 400.00 digital display
Kenwood TS-530------about $ 275.00 digital display

Cheapest of the tube types recomended:
Kenwood 520-----about $ 225.00 analog display
Yaesu 101EE-----about $ 250.00 analog display

Russ, I have used all these radios and I have found out that you usually
get what you pay for. You are only held back by the amount of money you
want to spend, hi, hi...:-).

I am sure that there will be hams that will dispute my recomendations
but their opinions should be listened to also...(no matter how wrong
they might be, hahahahah!!!:-))

Happy Hammin' to you Russ

42. Problem with Kenwood TM-733A data port and KAMPlus

Newsgroup: rec.radio.amateur.equipment
Date: 1998-11-01 00:00:00 UTC
From: "Walter R. Jones, Jr. KC7HEX" <wjonesjr@cdsnet.net>
Message-ID: <363CDFE1.7D973752@cdsnet.net>
Source record: 127270

Thanks in advance for your time and assistance.

I have a Kenwood TM-733A with the MARS/CAP modification and and KAMPlus TNCs and currently wanting to use the radios for MARS digital communications. I purchased Kenwood PG-5A Data Cable to use with a KAMPlus. I followed the directions to connect the cable to a DB9 Pin Male.

I connected the following:

Kenwood 6-pin mini DIN Male DB9 Pin Male

Pin 5 & 4 (Yellow & Green) Pin 5
Pin 3 (Orange) Pin 3
Pin 1 (Brown) Pin 1
Pin 2 (Red) Pin 6
Cable Shield DB9 Case

Pin 6 (Blue) Pin 4

I connect all the wires as indicated above except for Pin 6 (Blue) and the KAMPlus recieve diode was lite and didn't allow for transmission. I then connected the Pin (Blue) and the problem again existed. Separated power supply to two different sources, and with and without the Pin 6 (Blue) connected, the problem still existed. Did the same with the cable shield connected & disconnected, but the problem was not resolved.

The Pins were checked again to confirm that the connections were made correctly.

I wish to use the Kenwood 6 Pin Mini DIN Male plug for my digital means. I hope that there is a simple fix and I just don't see it.

Thank you for your time and assistance in this matter.

Most repeater controllers are computers, dedicated embedded microprocessors.
Generally they are cheap PIC or 8051, or in some older cases, Z80 microprocessors
running the control program out of ROM. You can use a general purpose PC instead.
A computer is a computer after all, and repeater control is not a very demanding computing
task. But the environmental challenge of a repeater site can make use of a PC problematic.

Since it doesn't run out of ROM, you'll need disc drives, and a way to automatically
reboot the operating program after a power failure. Simple and robust are the keywords
here, because repeater sites are often environmental hells. You need to make sure the
PC can tolerate the temperature extremes, the power bumps, lightning spikes, and the
often huge RF fields at repeater sites. You also have to make sure the PC RFI shielding
is *very* tight so that it doesn't contribute to the RF noise at the site. (This can be
killer,
and likely will require you to house the PC in a special RF tight enclosure, its own box
is usually insufficient.)

A parallel printer port will have enough input and output lines to implement repeater
control. That's built into most motherboards today, as is the disc controller, so you don't
need any other plug in cards. You can bring a video card, keyboard, and monitor with
you to the site when you want to service the repeater. They are not needed for its
normal repeater control functions, and are likely to be stolen if left at the site.

There are development packages available that let you put PC programs in ROM.
This can replace the ordinary BIOS ROM on the motherboard, or if the program
is too big to fit in that, on ROMs in a separate ROM card plugged into the bus.
This allows you to dispense with the problematic disc drive at the repeater site.
Since it is likely to be corrupted by power bumps, lightning strikes, etc, and since
it is a moving mechanical part, it is the most likely point of failure. So if you can
get rid of it, you want to do that.

What you have left after you do all this is a relatively big power hungry single
board computer. Since its function can be duplicated on a little 3x5 dedicated
microprocessor controller card, it seems a bit silly to use the PC. The only
upside is that replacement motherboards are cheap and available on every
street corner. So when lightning takes out the computer, you'll have almost
immediate availability of replacement parts.

Now all that said, there are some specialized cases where it might make
sense to have a PC on the site. You can fit it with a sound card and do
software DSP processing on the repeater audio. You can implement

disc stored voice mailboxes (an abomination). Etc. I have little use for that sort of foofraw on a repeater, but if you do, then a PC can let you do it.

Rose colored glasses? I remember a net called Westcars (West coast amateur radio service) that operated in CA in the early 60's. It was on the same 40 meter freq day in day out and arranged mobile and phone patch traffic. The malicious interference and bickering that went on rivals what you hear today.

I don't know if this is the right NG for this, but you should be able to help.

I am interested in getting started with HAM radio. I was wondering if someone could explain to me or point me to a site that could explain to me a few questions.

The first is what kind of license do you need to use a handheld radio.

The second is how do the phone services work, and with them who all can you call?

Any help is greatly appreciated. Thanks in advance,

Joe

55. TRAC msg memory keyer

Hi

I am looking for a schematic of a TRAC MESSAGE MEMORY KEYER.
Picked the little gem up at a flea market and naturally it doesn't
work.
While trouble shooting, I have found that half the chips were
installed
backwards. Now I am not sure that they are even where they belong.
Anybody out there might have a schematic that they could scan and send

or photocopy. I would be very willing to pay for copy and postage
costs.

Regards
Reed

```
The new version IC-Q7 1.00 Final beta is on

http://home.t-online.de/home/Ingra-Beton

Following changes/add/mods are made

- added Super-RX mode for Frequencies below 30MHz
- method described how to upload memories below 30MHz
- added copy/paste in the scan edges grid
- added pointer to remember Com Port
- The Software will not crash if the Q7 is not connected
or powered off, it will recognize now "IC-Q7 is off"
and "IC-Q7 not connected"
- added a "Del" button for erasing Frequencies
- extension for the data files changed to .Q7

Greetings, ...
```

59. Re: Computer Noise on HF Rig; help please

Newsgroup: rec.radio.amateur.equipment
Date: 1998-11-01 00:00:00 UTC
From: "Edward J. Dobbins" <ejd2933@ccp.com>
Message-ID: <363D303C.E9471C79@ccp.com>
Source record: 127287

I posted this message and received a question from a driver in SF, I however deleted the message by mistake. The question asked if I inserted the graphite into the hub oil. Yes. I was also asked if there were any other steps I took.

Yes. I used ground braid to ground the doors to the remaining chassis of the truck as well as the aluminum frame on the overhead air foil above the cab. I also coated the all of the connectors used on the braiding with a electrical conductive paste I got from a Ham friend who worked for a Light & Power company to maintain the contact integrity. What I also wanted to try was to ground all axles in the same manner for they are insulated by rubber cushions at the springs, but never had the time. Grounding the rig to the chassis with the
same type of braid will also be of benefit. I used the shield from RG8 and inserted
the power leads from the rig and tied one end to the rig and the other to the chassis
ground of the truck. Most cabs being made from aluminum, this poses an unique electrical ground venture due to the paint, movement, and large surface area generating great deal of static.

Any Kenwood/Icom/Yaesu will do fine. These things depreciate about as
fast as cars, so you get a LOT more for your money by buying used.
Bring along an experienced HF op (or buy from a reputable dealer).

The Ten-Tec line is also good, though you need to be aware they
marketed some rigs that only do CW and some others that are QRP. I
don't recommend QRP to a HF newcomer. The other problem with Ten-Tec
is that those who buy them don't seem to be willing to part with them
- there aren't many used Ten-Tecs on the market!

Personally, I'd consider the Kenwood TS-130 one of the better bargains
out there. But there are other rigs just as good.

Wrong, Icom did not have a thing to do with the HTX-202 design.
Radio Shack choose to make the battery pack the same as they did not
want to make their own accessories. The HTX-202 is a Maxon all the
way.

Looks like you found it. It's a disk about the size of a nickel or quarter with a thin strip spot welded on either side. The other side of these thin strips are soldered to some point in the radio. Just unsolder them and install a new lithium 3 volt battery. If Yaesu wants some rediculous price like $8 or more, go to a surplus place or one on the web and get one for about 50 cents and use it. They are all 3 volts and will work.

Hello,
it is absolute true what he wrote. I found the same during our trips to asian countries. Standard gives them the suggestion... and lots follow the. By the way, Standard is operated and (owned?) since middle this year by Yaesu. Go an see their web page. All Taiwan made radios are different, but ADI is in total a much bigger company than some of the japanease.

Thor:

Fair Radio "http://www2.wcoil.com/~fairadio/"
(419) 223-2195

will sell lyou a Collins 618T "IF Translator" module for around
$65 which has the exact module you require within it. This module
also has a mumber of extra/spare parts which will also work in
your '47. I have yet to find a way to fit both of these cigar-
rette sized filters in one mod, but I just got a spare AM3507
(amplifier/modulator) module for one of my 47's and I'm going
to try to modify it to hold both filters and a set of diode
switches for them. I have made this work "out of the box" on
a '47 module extender.
>
> Also, if there is any other mod that can be done to get LSB, I would
> like to know. I have heard that there is a mod that is done
> electronically that provides LSB and USB.

There are some other "supposed mods" available, but they are crap!!!!!!
The above filter (filter swap) mod works perfectly.

The '47 has the best damned ssb audio/mod in the whole world!!! When
I talk to people with the 47 they think that I'm running over the legal
limit of power or are "just down the street" from them. I used to talk
to my wife in So.Calif. from both Okinawa and Vietnam with a 47, just
like we were on the telephone. Was using a 1/2 Wave vertical on my
end and she was using the 2 element beam at my home QTH at Camp Pendleton
Calif.. They're a bulletproof rig and will stand up to all rigors and
be right on freq.. BUT!!!!! if you transmit more than 60 seconds out of
5 minutes you will fry the final tube and it will melt all over the in-
side of the set, just like the manual says!!! The secret is to remove
the little plate (4 screws) with the antenna tuning chart on it and the
little plate righht under that. This exposes a "tunnel" thru the final
amp module and around the final tube. These plates were removed for the
addition of the "teletype converter and cooling blower-filter". You need
to make up an aluminum chassis box, mount a super fan in it, put about

4-4"computer fan air filters on it and make a plate to replace the re-
moved plates with one 2" computer fan cooling filter (outlet)(to keep
out the bugs, which will crawl in and will blow the final by shorting
it out) for the outlet and a 1"pipe stub for the input. I got a 1" flex
"surplus oxygen mask hose" and ran it from the output of the "super fan
(with it's filtered input) out of the aluminum box, thru the 1" hose and
int the new air-filter plate on the '47. It works just fine. I filled
the al box with chunks of closed and open cell foam th quiet the blower
noise and all was well. I bought about a dozen "super blowers" from
"All Electronics" on Vermont street in Los Angeles. These were used
to "fluff up" the "ink" in a zerox machine, look like they would run
forever and probably cost $150 to build. They were out of them, but I
saw some in the last "all" catalog. I have a few extras. They cost
$13 each, are a radial blower, which sucks the air in the center and
blows it out a 3/4" "nipple" outlet, radially. I have a couple extras
if you are interested and can't find them at "All". I also have 3 extra
depot rebuilt PRC-47's with all the latest mods, new tubes, and in the
20"X28"X17" "Overseas Transit Container" with all accessories (key,
speaker, microphone, handset, whip antenna, long wire antenna, pack
frames, cables, battery cable, manuals (operators and repair), fuses,
pilot lamps, equipment bags, and more. Also included are boxed 110/220
VAC 45-400 Hz power supplies with cables. These supplies will power a
number of different 24VDC or 28VDC military radios and have cables and
connectors for them also. These are spares to my needs (I'm keeping one
set for each of my 5 kids, the Ex Wife, and one for me and 2 spares.)
All work 100%. Accessories are new, sets are a 9.96 out of 10 and the
shipping cases are a 8 out of 10. I'm selling them for $425 F.O.B.
Vista, CA. Converted to LSB add $80.

Good luck. E-Mail me if you have questions/problems. You won't regret
the time you spend getting these fine Collins sets up and running.

I currently have for sale a decent copy of "Practical Radio Communication; Principles-Systems-Equipment-Operation" by Arthur Nilson and J.L. Hornung, published in 1943 by McGraw-Hill, 2nd edition. The 927 page hardbound book is in very good condition, clean with no page tears or pen marks except for some minor marks on the bottom page edges. Blue cloth covers over flexible boards, which are a little creased. Several fold-out illustrations. Overall quite nice. Available for $12 plus $3 postage (within the US). If interested, please email to "Oldbooks78@aol.com" to reserve. Thanks, and best regards.

Dave

Source record: 127315

Hi,

First, I'd like to thank everyone who responded. The consensus seems to be that this rig is a good performer. Only one ham thought it was deaf, but he had his for all of six hours, which makes me think it was a problem with his rig, since everyone else liked theirs. Most everyone agrees that the marine color scheme hurt sales. Most seem to think it's ugly. I'm not exactly concerned with that, as much as I like my stuff to be pretty.

The big concern was that if the counter IC in the display goes out, it is not readily replaceable, making repairs difficult, but not impossible. How common a problem is this?

The rig I am looking at is a later model with the WARC bands. It appears to be very clean, and comes with an SP-107P. It's an estate sale rig, and the person who has it now is not knowledgeable at all, and cannot tell me much other than that it was recently checked in the shop and works properly.

OK, I see that there was a matching power supply (FP-107E). Why? The rig seems to have an internal supply. Was this an optional add-on, like on an IC-751? Is the external supply heavier duty? When and why would I want it???

What was the DMS option? What did it do?

Will I want to look for the other matching accessories (VFO, tuner, transverter)? How good was the transverter? Was it modular, as on the FTV-707? What bands were available, and could it hold multiple bands, like the FTV-901?

What is this rig really worth? I can get this one for $300.

My budget it tight right now, and I am committed to buying a TenTec Argo, but... if this is really a steal, I don't want to let it pass, and will work out the money part.

I am really open to more opinions and answers.

Thanks,
Caity

ANNOUNCING THE 706 TUNE CONTROL

The 706 TUNE CONTROL is a board
which plugs in the Molex connector
on the rear of your ICOM 706.

It makes the TUNER/CALL button on
the 706 operational. Pressing the
button cause the 706 to emit 10 watts
of steady carrier for tuning an
antenna (Yes, great for screwdriver
antenna users), a tuner, tuning an
amp, checking SWR, etc.

No radio mods required.

Works with all models of the
ICOM 706.

Check out:

http://www.qth.com/BetterRF

Cost is $32.95 + $3.00 shipping
& handling (US & Canada), $8.00
elsewhere.

Gerry, W6TER
The BetterRF Co.

Source record: 127322

After sitting in the seat of a semi with amateur radio for nearly 8 years, I have never
driven a computer controlled power unit. However, I have had a sever tire noise.
I've been told that this same noise sounds similar to the computer noise. To remove
the "tire" whine, I used common lock powdered graphite in the front wheel hubs. The carbon completes the ground of the tire static generated to the chassis.

If this is true computer noise, a question to Caterpillar through their web site may solve the problem but beware, they may yell something about HF RF destroying the computer and/or it's software.

HI, everyone,

I need a mounting bracket for the *original* (not Mark II) Yaesu
FT-290R, the model MMB-11.

I also wouldn't mind finding an original FTS-7 (not A) so that I don't
have to modify or remove the connector to put in an aftermarket PL
board. I do know that a CommSpec or FTS-7A can work, but I'd like the
original part.

I would also be interested in finding another matching case.

Please e-mail me if you have any of these items.

Thanks and 73,
Caity

101. 79A dim screen

Newsgroup: rec.radio.amateur.equipment
Date: 1998-11-01 00:00:00 UTC
From: BT <bt10ant@ptconnect.infi.net>
Message-ID: <363C8C2B.C21@ptconnect.infi.net>
Source record: 127329

I've had a Kenwood 79A since 1994. Most recently the screen readout has become to dim to the point where it is unreadable. Backlight still works fine and the radio is otherwise OK. This occurs with both an external power supply and the internal battery. Anyone else experienced this anomaly?

Very frustrating as I plan to get a new base station soon and don't want to put needless repair money into the 79A. Otherwise I've loved the radio.

Hello all,

I have a "MINT" Kenwood TS-450S/AT For Sale.
Never been mobile, and I have all the manuals
and boxes. It is also "MODIFIED" for "MARS" &
other Out of Band Frequencies.

Starting bids at: $900.00 FIRM.

An outstanding General Coverage Mobile/Base
rig with punch! [150 watts(+) SSB p.e.p.!]

All Digital with DSP support!

(Receive) : 30KHz - 40MHz
(Transmit) : 1.705.01KHz - 29.999.99MHz

Excellent for "MARS"/"Emergency Response"!

My last query netted a reply of "soon". The FCC has approved the radio.
Sorry I can't give you a more specific date.

On the price. I was told it will be competetive with the IC-706. Further
probing revealed that it will be at the same price or just a 100 dollars or
so higher than the 706.
73, Harv.

Hi People
On the links sub page of the radio section of my homepage
is a direct link to a great freeware program. It will grab most of
the Trojans and retros that have been appearing during the last 6
months. It will NOT put a new TSR on your system so it will not
conflict with the big commercial AV's already on your system. I like
to run at least two AV's on my system - what one doesn't catch the
other most likely will. The trick is not to have them conflict which
they often will if BOTH are running TSR's.
By the way, if you haven't seen the new Mosley mini
tribander you can check it out on the Mosley page. It is really
tiny!! Very convenient for a temp QTH.

$1,500 or best offerï¿½.I will pay shipping. Instruction manual included

The Cushman CE-15 Spectrum Wave Monitor is particularly designed for use in the Radio Maintenance field. It provides the user with the capability of visually monitoring a selected portion of the radio frequency spectrum for the purpose of determining spurious emissions, intermodulation interference, unwanted oscillator radiation, and harmonic levels. This instrument can monitor and audibly identify AM and FM carriers, which is particularly useful in the case of interference. It may be used to check intermodulation distortion between RF signals, do IF and RF signal tracing and may be used a s field strength receiver when using a calibration antenna.

> Winradio?

ANY Item be it tubes radios or general electronics made in North America
are tarriff and duty free... on the contrary to some comments I find UPS
is a good method for larger heavier items than the postal service .Yes
we in Canada pay a Customs brokerage fee that is determined by the
declared value of the item in US$ converted to Canadian $ ... On the
other hand neither UPS or Canada Post or the US Postal Service will
INSURE for damages ANY item deemed to be fragile, be it Glass or
electronic equipment... If you are bringing in items to the U.S. from
Canada your item may be brokerage free depending on the level of service
used... in some instances you are better off using 3 Day select than
surface because MOST items brokerage is covered in the cost... also the
number of people handling the item is decreased dramatically ,hence it
is also SAFER... if you need more info UPS will send you information on
incoming and outgoing
parcels and their Brokerage cost status... 73 de Jordan...

Source record: 127093

Have to help finance more Ten Tec purchases, so I am selling my Ten Tec Argonaut 509 and matching 208 cw filter. It is about a 6 or 7 on a scale of 10. Has a couple of marks on the top left front, and a nick out of the black plactic bezel around the dial. It is not mint, but really not bad looking either. However, it works perfect!! the dial string doesn't sag at the left end like most ten tec analog radios do. The PTO is smooth and was factory rebuilt in feb or mar of this year. They also replaced the finals, and completely realigned the radio. I have the receipt for $132.00 worth of work. comes with a nice copy of the manual in a loose leaf biner in plastic sheets. I will sell the radio and filter for $250 and ship it for that in the conus.

Thanks
Tim

Are you using a 7603 with the display feature and are the 7L12
settings appearing on the screen in vector graphics? BTW the display
has a separate brightness control from the trace.

I've never used a 7L12 but I believe it's a essentially a 7L14
without storage. If that's right, and just from memory, try these
settings: Jumper the input to the internal calibrator, set the
attenuator to the greatest input sensitivity (-70dBm?), set the sweep
to 10 MHz per division, the tuning to 50Mhz and the bandwidth
(dispersion) to 50kHz. If there's a clipper on the 7L12, move the
displayed line to the bottom of the screen. Use the fastest sweep
speed (cm/sec) that does not light the uncalibrated lamp.

Now you should see one large peak at the left of the screen (that
one's fictitious at 0MHz) another in the center of the screen at
the calibrator frequency and one at the right at the calibrator's 2nd
harmonic. If that's okay, connect up some sort of antenna and look
for FM broacast stations near the right side of the screen

Has anyone else had a problem programming the TM-V7a? I downloaded the software from Kenwood's FTP site, purchased the PG-4S cable, and visited Radio Shack to get a DB25 to DB9 adapter. When I select Radio/Read, it proceeds to download the freqs, but when complete, it puts the UHF side into transmit!!! The only way to take it out of transmit is to turn off the radio. I'm wondering if my radio is misconfigured, or the RS adapter has the wrong pin outs, or the PG-4S is bad. Thoughts?

For Sale: 2M (50 watt) Linear Amplifier and pre-amp

This amp is just over one year old and is in excellent condition. The current list price for the amp is $119.95 at AES (which is where I bought it). I am willing to sell the amp for $80 or best reasonable offer. I got my amateur radio license a while back (KC8IHY) and have just gotten out of the hobby for one reason or another. Please let me know if you have any questions or are interested. I'd be more than happy to answer any questions you may have. Please feel free to e-mail me at: mnicolia@greenapple.com

Model: MH-A103 (Maha)

This amp is designed for use with any VHF band handheld or mobile transeiver with an RF output power rating of 2.5 to 5 watts to increase it's output to a nominal 50 watts and has a built-in GaAs FET receiver pre-amp.

Features
----
* 50 watt output with 2.5-5 watt input
* Low noise pre-amp
* Dual Mode (FM & SSB)
* SWR protection circuit
* Reverse DC power polarity protection

Specs

Frequency range: 144-148 MHz
Modes: SSB/FM
Input: 2.5-5 watts
Output: 50 watts
Receiver gain: 18 dB
Impedance: 50 Ohms
Connectors: Type M (SO-238)
DC Input: 13.8 Volts
Current Drain: 8 Amps (max)
Dimensions: 5.3" (W) x 1.7" (H) x 6.3" (D)
Weight: 2 lbs

There is more information about this product at:

http://www.maha-comm.com/products/poweramps/mh-a103.htm

Please contact me if interested (mnicolia@greenapple.com).

Greetings,

Last summer I got a nice R-388 and a mint 75A-4 so the old
75A-2 has been unused for a few months. I would like to pass it along.

The 75A-2 is working and its pretty clean. The kilocycle dial has
been burnt by the lamp and there is a wrong size knob on the AF gain
pot. The knob looks the same as all the other original knobs, just a
little to small. The cabinet has been lightly sprayed with grey primer
but
the wrinkle has not been filled. The front panel is very clean.

It has a Heathkit 100kc calibrator and the 148C-1 NBFM adapter.
I also have a Sams photofact on it.

I'm asking $375 plus ups from 44134 (cleveland,oh.) I am
guessing the thing wieghs about 60 lb.

Thanks, Dan N8ETQ dharlan@ameritech.net

You weren't listening, Steve, so I'll say it again:

Just a reminder - in 1959, the FCC published a Notice of Inquiry asking what incentives could be tacked on to the Extra Class license. They received thousands of comments. We periodically read of folks criticizing the ARRL for "...hurting amateur radio with their incentive scheme..." but it was really the FCC itself that planted the idea in the first place.

Has anyone purchased and used either of the two new MFJ Switching DC supplies? My Astron 70 crowbarred for no apparent reason the other day (maybe the cats shorted it out), and it made me think of replacement/repair costs on the thing.

The two new MFJ supplies, the larger of which is still only about 10 lbs and handles 40+ amps looked pretty enticing, but I worry about RF hash and acoustical buzzing. The last switching power supply I used worked well, but was really tough on the ears.

Has anyone got any experience and comments on the the MFJ's?

tia

Anyone know which pot on which board wiil increase transmit power for Kenwood TS-870? I bought a new one a few weeks ago and am disappointed that it struggles to get 75 watts out on SSB and CW. (Yes, my wattmeter is reasonably accurate.) I have the TS-130, TS-430, and TS-450 here, and they all do 100 watts or more. I see quite a few of the new rigs that can hardly make 100 watts. Can anyone help? Thanks. Bruce, N0XL

Russ,

I agree with the above comments as well as their price estimates. I've been a ham for 24 years although I am the type who feels that going out and buying a new rig off the shelf kind of takes away the fun. If you want to try your hand at troubleshooting you can get all of the above rigs in less than optimum conditions for even less money and have the pleasure of accomplishment.

Regarding rigs, I wanted to point out that the TS-520 and the 101s don't have the WARC bands, if that is a factor. Both are excellent rigs. You may also consider the Drake TR7A, $400-600 (avoid the earlier TR7s, Drake had some problems with them). R.L.Drake is still in business and still services the old gear. This was one of the first rigs to include a general coverage receiver. Other Drake rigs include the TR4 transciever as well as the T4 / R4 transmitter receiver combinations, all available with A/B/C suffixes.

Many hams will disagree with me but I feel that you shouldn't be afraid to buy older tube gear. Tubes are really not that hard to come by and they don't last forever, but they do last a long time.

Regarding all this older gear, the performance will not be up to the level of a new Ten-Tec Omni VI or FT-1000MP but, IMHO, a $200 TS-520S will give you 90% of the performance of a $2500-$4000 rig.

Good luck on your upgrade.
Tom

Peter, I have been using my Gap Titan DX for over a year now. You may recall hearing about the storm we received in Western Michigan this Spring with estimated wind gusts of up to 130 MPH. I awoke to find my Titan DX bent over about 50 degrees and binding on a piece of PVC that holds an element. A slight movement released the pressure and back up it sprang. I haven't done a thing to it since. I've gotten great signal reports and find this to be a very servicable antenna. High marks from me.
Cheers, Dan ab8cd

146. FORSALE - Immaculate Kenwood TS-520, great starter rig

Newsgroup: rec.radio.amateur.equipment
Date: 1998-11-02 00:00:00 UTC
From: jpl@hoserve.ho.lucent.com
Message-ID: <71l8a3$5u2@nntpb.cb.lucent.com>
Source record: 127165
Cross-posted to: rec.radio.swap,rec.radio.amateur.equipment,nj.forsale

I have a virtually immaculate Kenwoods TS-520 rig that I would like to sell.
This was my first "real radio and in my opintion is still
one of the best rigs around. It would make a fantastic beginner
station or a great backup rig.

I am only the second owner of the rig.
I purchased it from a collegue of mine at Bell Labs (who
was the original owner), and I have the orignal sales receipt,
boxes, and manual for it. Both he and I took
exceptionally good care of this rig. It has NEVER been in a smoking
environment and has NEVER been mobiled.

For any novices not familiar with this radio, it is all solid state
(discrete components, so its very easy to repair if ever needed)
except for a tube driver and a pair of very
robust 6146 tubes as the finals. It has a builit in power supply,
but can also run off of 12VDC.
It covers 80,40,20,15, and 10 meters in CW and SSB (upper and lower) modes.
The receiver section is excellent and I always get excellent audio quality
reports. Many folks say that these older Kenwoods are some of the best
sounding rigs on the air.

This rig also has the optional 500Hz CW filter
installed (genuine Kenwood option).

The price is $300 firm + shipping. You might find one for a few $ less,
but NOT is this great condition.

No, of course not. An amp doesn't change the phase/frequency characteristics
of a signal. A repeater does, however. It dereferences the original signal
phase/frequency by converting the signal to baseband and then remodulating
the baseband using a *different* transmitter.

If I remember correctly, there is a front panel menu setting to adjust power level. I haven't used one for a while, but I remember being able to set max power levels from one of the options buried in all of the many menus.

The answer depends on what you want to listen to and under what conditions. It has some nice features and on a good, OUTDOOR antenna, it works fine, but probably no better than a used $400-500 rig. And, it ties up a multi-hundred-buck computer. The major use I saw for it was to toss in my briefcase and use it in the evening to fill some boring evenings in the hotels. With an indoor antenna, it is USELESS! You won't hear a handfull of signals over the terrible hash generated by the computer.

When you make your decision, do your dead-level best to get past the "gadget appeal," because I think that'll be a good part of what you're paying for.

Have you given any consideration to using an MFJ-1026 Noise Canceling
filter? It works very well for computer noise in my shack - don't know how
well it would work mobile though.

Couldn't someone modify their transmitter so the power amplifier wasn't
enabled until the PLL has had enough time to have settled in frequency?

For that matter, I had always assumed that radios *normally* did this:
muting the audio (on receive) or disabling the PA (on transmit) until
the PLL is in lock and stable.

How long does the VCO frequency wander (really the PLL loop filter
ringing) with a typical modern FM rig?

Dave

Source record: 127182

You might have seen a previous version of this, but I have a couple dozen Janeil SP-2000 Stereo Processors for sale. They are brand new.

They are going cheap!... my wife wants them out of the garage. I started out with about 100 units and am down to nearly 30, but there still isn't room for them and our cars.

$20 dollars plus shipping. Shipping most places in the U.S. runs about $10....Canada runs about $15.

I put the specs/manual for the Janeil online at:
http://www.timp.net/janeil
Here's what it does:
The SP2000 is a digital readout audio processor that connects to the BASEBAND output of a (mono) satellite receiver and will give you full stereo reception of not only TV feeds, but also a wide variety of stereo audio services, as well as mono ones. These include the BBC world service radio, and other international broadcasters, background music, major radio stations from all over the country, network radio stations, talk shows, and even reading services for the blind. This device makes possible reception of wide and narrow audio sub-carriers with even the most primitive satellite receiver.
Also, some people use the Janeil to give them multiple audio services if they already have a stereo receiver.

Janeil is no longer in business, but the units are brand new and never been opened.

If you would like one, please e-mail me or send a check to the following address.

Thank you for your time... Alan Neves

Heard that! Your point is well taken, as is the one about tying up a computer, however, with older Windows-capable computers getting dirt cheap, you could even dedicate one to a radio and perhaps still be ahead.

My concern is a little different . . . I'd really like to have a DSP receiver to play with, but having seen lots of people pay the "early adopter tax"* for new gadgets (ranging from VCRs to CD players to cell phones), I'm kind of holding back for now.

I wonder what the BOM in a NRD-545 (or PCR1000 or the Ten-Tec unit) adds up to (not that I begrudge them recouping their R&D expenses). I'd think it shouldn't be more than a VCR, but of course they'll never get to that kind of volume, so the price can never get quite that low, but still . . . more and more, radios are mostly silicon, and now the most expensive components -- the hardware filters -- are going away.

*O.K., to be honest, it's not just other people -- I once paid $300 (over a grand in today's dollars) to be the first on my block with a four-function calculator, so, yeah, I've paid my dues and learned a valuable lesson.

Best,

Message-ID: <R47%1.2101$zN5.3171031@news2.atl.bellsouth.net>
Source record: 127200

KF4OUZ wrote in message <363CF2B1.9C5E65A3@bellsouth.net>...
>What kind of amp? C.B.?

Chris, his concern is probably the proper way to key a tube-type
linear amp with a modern rig. Some times getting the ALC levels
to match, and finding a "good" way to drive the relays in some amps
can be a challenge -- for example, some amps use 120VDC on the TR
relay, while some rigs expect a nominal voltage of probably around 12
volts DC (I think my Kenwood TS-430 was like this....)
An example of the "problem" is what a Collins 30L1 amp expects:

+120, grounded to TX for the TR relay
ALC voltage of , well, it has been a while.

Imagine the problem he might have interfacing this
amp to his 756 if it is like my POS Alinco which
expects 3 volts max ALC, and heaven only knows
the proper way to get it to drive an external T/R
relay.

The T/R problem can be the easiest to correct.
The ALC will be the hardest and might require
some experimentation if the specs for the amp
or the tranceiver are not clear as to just what voltages
are appropriate.

Sometimes one can be verrrry careful and lightly
drive an amp, and not worry about the ALC, though
I am sure I will get pounced by the newsgroup police
for that one. The key word is CAREFUL and not
overdrive the amp on voice peaks. Again, experiment
to find the right level where you are not splattering signals
anywhere exept the freq you are transmitting on.

This is just a guess, maybe he DOES want to use
it with a CB. But since he did ask a question, I didnt
want it to end up like most of my usenet questions,
with only a few smart remarks and no real answers.

Message-ID: <71j3rm$a10@bgtnsc02.worldnet.att.net>
Source record: 127205

I have an ICOM U-16 16 channel UHF handheld (420-470 Mhz) that I would be interested in selling. Also have a speaker mike and drop-in fast charger.

This radio is FCC type accepted for both commercial and amateur service. It can be programmed via the keyboard (frequency, offset, TX/RX PL, etc) and can also be cloned using a special cable.

It uses the standard BP-8 series Icom batteries.

The radio was sent to the factory a couple of years ago for replacement of the backup battery and general checkup. It works well, and is in pretty good condition. However, the drop in charger does not work like new. It burned a couple of resistors a couple of years, and I replaced these resistors, but it doesn't seem to charge like it used to. I mostly use the radio in my vehicle using the cigarette adapter.

I will consider any reasonable offers.

John

Spotted Rogerbird's latest modification on
his webpage:
http://members.tripod.com/~Rogerbird/24mhz.html
This modification will work on the HR2510. You'll
have to ask him if the modification is also good
for the HR2600 and Lincoln radios. Assume so.
His homepage is http://members.tripod.com/~Rogerbird

Another updated page with good information is
http://www.pantherco.com/radiorepair

Totally incorrect answer...why even bother to reply when you have no idea what you're talking about?

The original poster asked who made Radio Shack's 2-meter HT...the HTX-202 has been around before ADI ever existed.

Well I got my dose of hate mail today from the Smokin J Radio Ranch.
Why not be a man Murray and post the vitriol you send to my mailbox so
all your potential customers can see what a low life you really are.

I'm not going to post your mail but I have forwarded it to appropriate
places. Just in case you are still too stupid to figure it out I don't
want any email from you. You have something to say say it in public
instead of sneaking around making veiled threats via private mail.

Knowing how the FCC works, your statement is kind of humorous.

The FCC endorses the ARRL proposals. The ARRL showed them
that incentive licensing was the way to go, and the FCC rubber stamped
it. The same with the Spread Spectrum rules. The ARRL wrote them,
the FCC rubber stamped them, it is now law.

The ARRL is writing new rules for 5 wpm General (seeing how they are
dying off faster than people are upgrading) and the FCC will rubber stamp
that as well. The ARS is not that important a service for the FCC to
staff and spend real money on.

If Joe Blow petitions the FCC, his proposal is stamped "premature." If the
ARRL send in the same proposal, it is made the law. It's not that the ARRL
is any better/smarter than Joe Blow, it's just a way of doing business
cheaply.

To say otherwise is just ignoring the facts.

Thanks to everyone who has replied so far. But I'm no nearer to solving the problem.

The feed line is perfect, low-loss and high quality cable with about a 20 ft run only. I have tried the radio and 1.2 GHz module into an appropriate dummy load and also into my 1.2 GHz mobile set up. Exactly the same problem occurs.

Any further ideas gratefully received!

Al

197. Re: Which best HF transceiver with DSP on rx and tx?

Newsgroup: rec.radio.amateur.equipment
Date: 1998-11-02 00:00:00 UTC
From: Dave Burr <dtburr@lumisoft.com>
Message-ID: <363DBD3C.3F5C@lumisoft.com>
Source record: 127226
Cross-posted to: rec.radio.amateur.equipment,rec.radio.amateur.misc

The '1000 MP and the '775 are good rigs, but don't discount the TS-870, which has excellent DSP on Rx and Tx. Plus it has by far the best received and transmitted audio, IMO. I had Icom rigs, including some of the latest ones (the mechanical build quality of Icom rigs has gone down the proverbial "shitter", and I was tired of having to modify the rig to get sufficient drive with a normal microphone), and I gave up an FT-1000D for the '870.

The FT-1000D was a super rig, but the 870 is much more advanced (but you would expect that because the '1000D has been out forever). Plus, I like to play with computer control, and the '870 makes that easy. It has a DB-9 jack in the back. None of those silly "level converters" needed.

But, hey, we could debate this issue all day!

>From: clintbrad4d@earthlink.net:
The original poster asked who made Radio Shack's 2-meter HT...the HTX-202
>has been around before ADI ever existed.
> Yes it is MAXON in Korea & thailand making the RS 2M rigs, but for
your information "ADI" has had Amateur radios long before Radio Shack got into
it. The ADI Sender 150 and 450 handheld models were being sold long before the
HTX-202 came around. It wasn't untill Premier Comm. started to distribute ADI
in the USA & advertize heavily in the US ham magazines that most people became
aware of ADI radios. Just like "Midland" most people today don't realize
that midland has been offering new Amateur trancievers for over 12 years,
because they don't run full page ads in CQ or QST. (Midland currently offers 3
models; the 73-030 HT, 73-005 HT and the 73-007 HT, the first 2 are 2M, the
last is a 440) The 73-030 is pretty much the Rexon RL-115, but it has been
around for a few years, before MAHA decided import radios. Yet most people
think of the "Rexon" as a new offering in the US because of those 'full page'
ads in the magazines.

From: pmb1010@hotmail.com
Message-ID: <71kmhbutl1@nnrp1.dejanews.com>
Source record: 127232

Yep, that's exactly what those "boxes" are... they are external
encryption boxes.
Motorola makes the outboard boxes to attach to radios that aren't
secure capable (some are, some aren't) to make them secure.
You put the key switch in "keyload", attach the
APPROPRIATE keyloader, (with correct # entered into the loader
for the system you operate in), and press the "PTT push-to-transfer"
on the keyloader. The "key" loads into the encryption module inside
that black box. You then put the key in "operate", and when you
select encryption, it'll encrypt the transmit signal with the
key you used. On the receive side the radios are aware when the
receive "clear" or "coded (encrypted)" signals, and change in the
box to the receive signal appropriatly. The erase button allows one
to immediatly clear the key from a radio (for instance to drop off
the car at a mechanic - they won't hear the secure conversations).
The small connector is for the keyloader cable. The encryption
keys are volatile, therefore disconnecting power generally destroys
the key enterned into the box. If that happens, and you select
coded mode, typically you get a warning tone on transmit & it
won't transmit at all. The important thing to remember here is that
Moto makes varying types of encryption - DES, DVP, DVP-XL, DES-XL,
DVI, DVI-XL. All require the correct keyloader to work right. The
only reliable way to know what type it needs is: 1)find out what
the department keyloader is, or 2) take the radio/secure box apart
and physically look at the encryption module, and cross check the
part number. That's the only way I know how, if anybody else knows,
I'd like to hear it. Using the wrong keyloader shouldn't hurt things,
it just won't load a key to the module in the radio/box.
The audio in coded mode is OK, not perfect, and the range is diminished.
Our local department uses DVP, and they must ask for retransmissions
to get what the guy is trying to say sometimes...
Vic

I believe that this was in the early 80's. Any equipment made in the U.S. or Mexico can be brought into Canada without Customs Duty. Any "ham radio" equipment made anywhere else can be brought into Canada free of duty as well. We cross the border on a monthly basis and it is my believe, that common sense is important here. A Kenwood power supply is amateur equipment, but a dozen RCA DSS satellite systems are not. A Cushcraft VHF antenna is, but a satellite dish is probably not, unless you can convince the Customs officer that this is for a hamradio project. Recently, we had several hundreds of dollars worth of books, as well as hundreds of dollars worth of ham radio equipment. The Customs officer totalled everything and then put it as $ 1100 worth of books to simplify their work..... Rene VE6WCA (dutch)

Not true. the setup defaults to SSB off when using the converter, but if
you read the manual there is a procedure to enable it.

Have you contacted MFJ?

I recently repaired my 10+ year old 941D tuner and with MFJ's help
identified the problem as a defective panel meter. The replacement
meter was about $10.

I don't think it's possible to do it directly. The manual makes no reference to such a capability, and I've never noticed anything like a serial line anywhere on the schematic.

You could probably design some programming software and a circuit to convert serial data from the computer into signals imitating the keystrokes from the keypad. I've considered doing that in the past but have never really pursued it. Looks like too much work.

Many don't. They'll allow transmit after only achieving rough lock.

>How long does the VCO frequency wander (really the PLL loop filter
>ringing) with a typical modern FM rig?

The PLL never really settles, especially if there is any modulation.

The two most popular digital modes on HF at present are plain
old RTTY and PACTOR. The latter is better if error free transmission
is required. There are some better methods than PACTOR, such as
PACTOR II and CLOVER II, but they aren't yet in as wide use.

>conventional table top radios?

There is a very serious problem with this radio. It is possible to
corrupt the EEPROM data in the radio by ordinary activity on the
serial port, and that requires it to be returned to Icom for service.
IMHO, this is a *fatal flaw* in the radio design.

There are now some third party backup and restore utilities
to allow you to recover from this problem (if you've backed
up the EEPROM data before it is corrupted). That makes the
radio barely acceptable.

To put it kindly, the Icom supplied user software sucks.
And Icom won't release the command set of the radio so
that proper third party software can be written for it. A
number of people have "reverse engineered" the command
set, but using third party software is still a gamble.

If you want this sort of computer driven receiver, I'd suggest
looking at the Winradio or the new TenTec product. They
release their command sets, and as far as I know they don't
suffer from the corruption problem which plagues the Icom.

That said, with decent third party software, and with the
EEPROM data safely backed up, the PCR1000 actually
performs well as a radio. You can pitch the antenna
that comes with it, but with a good outside antenna it
performs quite nicely. I'd put it roughly on a par with
the receiver in the IC-706. It won't equal some of the
better tabletop receivers, but it isn't bad considering
the very wide frequency range it covers.

I am part of a group of engineering students who race a solar boat at the "Solar Splash" held annually in Milwaukee. I developed a telemetry system last year using some onboard and onshore computers and MFJ TNC 2 packet controllers. We rented a pair of Motorola radios to work with the system.

Those radios worked well, but we would rather not worry about renting all the time. So, we're looking at what options we might have. What would anyone recommend? We only need about 500m range and have good line of sight for this application. Commercial radios tend to be expensive and require a license. Ham equipment would be great, but we rarely have anyone on the team with a ham license to operate it. Is there some option within these two that would work for us (relatively inexpensive & simple license requirements). Would FRS equipment work?

I would appreciate any thoughts.

Hi Matt,

I have purchased seven of these radios in the last few years. I
like them because I can program them, and they are very inexpensive for
what they can do. The service manual says that the radio can be
programmed via a pc and interface, but when I called RELM a few years
ago, they told me on the phone that this item was being discontinued due
to lack of sales. Too bad, but what are you going to do, I guess.
Dosen't matter to me, though, because we are going 800 MHz at the end of
the year!.

Has anyone experienced RF hash (~ S7) in a Subaru on 40m or 20m? In particular I have a 1999 Forester that as soon as I turn the key to the on position (engine NOT running), the S meter jumps to about a 7 (and stays there). If I start the engine it remains at S7 but sounds slightly different (could just be the ignition noise added). I can't tell if it's from an onboard computer, the fuel pump, or something else. I know it's NOT ignition noise (there is some but very low level). Has anyone diagnosed this vehicle's noise? Does this sound similar to problems in other vehicles?

BTW, I traded a Ford Ranger that had it's fuel pump modified to reduce it's RF noise on HF (mostly 10m).

Steve

FS: Sams Photofacts as low as $1.25 ea. ppd.
I'm way over stocked on some Sams Photofacts sets & I want to get rid of them.
The following prices apply until the excess Sams are all gone.
In quantity they are ONLY $1.25 per SET (per SET, not per folder). This price
INCLUDES SHIPPING in the 48 states.

For a list of available numbers please visit my web site at
http://www.vintage-electronics.com
click on "Schematics" & check out the RED SALE SECTION down near the bottom of
the page.
While visiting the site you may also find a radio or two that you'd like to
have among the few hundred sets that are listed. Also have some tube audio
equipment, communications gear, test equip, vintage tubes (Also have a 50% OFF
sale on some overstocked tubes) & other collectible electronics.
Thanks
John

I built the 1/4 wave 2M and 70CM ground planes from "Now You're Talking." The recommendation there was to bend them down at 45 degrees. I did so and they perform pretty well. You have given me the idea to build some new ones at 1/2 wave. I biult the 1/4s from hobby shop brass rod and sheet. As a general question to the group, will there be gain advantages of 1/2 wave versus 1/4 wave? This could be worth another trip to the hobby shop (like I need and excuse for that!).

AR-8000 Scanner--full coverage from 500kHz to 1900mHz. Excellent condition with original box, instructions, AC adapter and NiCads. Also includes Opto Scout connector, ScannerWare software and computer interface with cable. $ 550

If interested, contact johnl@ptd.net or call (717) 629-3403, evenings.

Thanks,

John

Yes. IMHO there will be a few glitches - there will be brief
blackouts (maybe an hour or two) in a few places, a few isolated
smaller businesses will have problems. I don't see a massive
breakdown of services.

>2. Is there a standard digital mode that is in use at this time?

Note that the data controller (and the PC it's hooked to) is the part
of the amateur station most likely to suffer a Y2K failure..... CW
and SSB, especially with a pre-1990 radio, are virtually certain to be
Y2K-safe.

I don't know the serial numbers but i believe it was the second generation
FT50.Here is all the info i have so far.Good luck
Robert
My last post was cut off for some reason.Yaesu knows about the problem and is
fixing it under warranty.They also have an updated
shorter power button that they have been sending out for free,or you can send
it to them.
I have one correction on my previous post.THE CORRECT
CURRENT DRAIN IS around .20mA or 200uA. Mine was
.25mA or 247uA.If you leave the meter on it probably will drop to
.20mA because mine started to.

Thanks Robert,

That problem has been driving me nuts. I've had mine about a month and
I too thought it was my nicads. Couldn't put my finger on it but had'nt
gotten all that serious either. I will confirm this and let you know
how it goes.

The power button is also a design flaw in my opinion. Good radio,
stupid design on that feature. I solved that one with some high density
polypropyline foam with adhesive on one side. I didn't use rubber foam
because of the odd odor. Basically cut a 5/8 inch circle and then cut a
1/4 inch hole in the middle of it. Took a little doing with an exacto
knife but I did it. Now, I think I would make an elongated oval say 1.5
inches long with the same 1/4 inch hole near one end and place it over
the power switch. Turns out, if you hold it in your left hand it feels
pretty comfortable. Oh by the way, the foam was about 3/16 inch thick.
In my brief case it kept the power from coming on by being bumped by a
loose object. The only down side is that the adhesive seems to be
letting go of the foam. I'll try another type and let you know. The
doughnut like pad seems to have done the trick for now.

Thanks for your posting '73

> 1. Is the Y2K bug overly hyped by the survivalists?

No one can say for sure, but many who work with solving the problems feel
that the extreme gloom and doom projections are overly hyped. Don't get me
wrong, there will be problems, but these will be more of a "pain in the A**"
type of problems. Still, Hams should be ready to help with emergency
communications in the event of a power system failure or phone system
black-out. Be sure to check with your local Police, Fire Departments,
and Red Cross to see if there's an active emergency communications group
in your area.

> 2. Is there a standard digital mode that is in use at this time?

I'm no expert on digital communications, but having a Multi-Mode
Digital Controller, like the KAM 98 Single Port Multi-Mode Digital
Controller, would be a safe bet. It supports: Packet, PACTOR, GTOR, AMTOR,
RTTY, ASCII, CW, WEFAX, NAVTEX/AMTEX, KISS, XKISS, HOST, GPS, & EMWIN.

I've never tested packet over FRS Radios, but I don't see why it wouldn't
work. I'll assume that you're just running 1200 BAUD, correct? With FRS,
if you can see it, you can work it. Put a big hill in the way, and FRS
isn't going to make it through the hill. The only danger I see is if
someone else comes up on your frequency. With only 14 channels and the
low cost of the units, it could happen. Just to be safe, you'd want tt
monitor a channel without the PL on receive end. If someone is using it,
be ready to switch to another channel.

By the way, I've hear of Solar Boat Races, but never seen them.

Is there a WEB Page to go to?

How fast do the Solor Boats go (slowest boat --> fastest boat)?

I don't understand what all the fuss is about. I found the link in less
than 1 1/2 minutes. It wasn't that clear, but it wasn't that difficult
either. We aren't being charged to peruse this site, it is a little too
graphic intensive for my tastes, but no one is forcing me to stay at the
site any longer than I choose, and I wouldn't presume to force my taste,
or lack of it, on others. Having done a little HTML work, it's obvious
to me that a lot of effort was put into this site. I might even be a
little jealous, as I have little or no artistic skills.

I would be inclined to cut the site author a little slack, hey it even
has a section on Ham Radio.

239. Me? Part of Antenna?

Newsgroup: rec.radio.amateur.equipment
Date: 1998-11-03 00:00:00 UTC
From: Louis Bybee <louisb@datacomm.com>
Message-ID: <363F525D.EEB1A3C1@datacomm.com>
Source record: 127019

Recently in answer to my suggestion that someone post instructions on how to test HT antennas in a more scientific manor than S units and subjective comments of others, it was suggested that this would be difficult as "I" was part of the antenna. At first I was offended. How did they know that I was SLIGHTLY overweight, and could be a more generous part of the antenna than others? :-)

In the interest of learning something, and assisting in the learning process of others, I am assuming that what is being suggested here is capacitive coupling, involving my body?

Having an old aluminum hard lying around, and more time than usual, I mounted a bulkhead BNC connector in the top center of the hat. My motivation was, noticing that while working public service events there seemed to be a definite reduction in signal strength when I placed my body in-between the HT antenna and the repeater antenna, while having the HT in a pouch, strapped to my body. I can now mount a BNC HT antenna on top of the hard hat. My questions are:

1. What will the effect on the SWR / relationship to the HT be?

2. Will there be less body exposure to RF? Will the metal hard hat shield what's left of my brain.

3. Would the metal in the hard hat be a sufficient ground plane for an antenna requiring one?

4. Would this be a good test platform for evaluating the performance of different HT antennas, if I were standing out in a field, away from other obstructions?

Thank you.

Louis

240. WinRadio 1500 User Impressions?

Newsgroup: rec.radio.amateur.equipment

From: ccharris@earthlink.net
Message-ID: <363f4810.14525200@news.earthlink.net>
Source record: 127020

Hi.

I've just started looking for a new receiver. I will be replacing a Sony ICF-2010 portable. I have focused my attention on the WinRadio 1500e. I was wondering if anyone has personally used this radio, and if so, what are your inpressions? How does the performance of this radio compare with table tops. I would think radio specs as well as scanning features of the 1500e would place it in a class of table tops in the $1000-$1500 range.

I received some negative info reguarding the ICOM PCR1000. Apparently EPROMs can be erased, which then requires return for factory reprogramming.

I also looked into the Ten-Tev model, but it only goes up to 30 Mhz.

Thanks in Advance

Craig Harris ccharris@earthlink.net

Bonjour cher om
Le probleme de votre 940 est bien connu !!
Lorsque vous avez ce genre de probleme cela veut dire que votre PLL n'est
pas verouille donc il est incapable de se caler en reception et en emission.
Ne vous inquiete pas votre 940 n'est pas mort hi!!!
il suffit simplement de refaire toutes les soudures sur la platine PLL unit
qui se trouve de memoire presque au dessus du hp.Mais vous auriez tant qu'a
faire refaire egalement les autres soudures des platines car malheureusement
cela est son seul defaut

Yes, your body is the counterpoise for the antenna. In other words,
you are half of the antenna, the ducky is the other half.

>Having an old aluminum hard lying around, and more time than usual, I
>mounted a bulkhead BNC connector in the top center of the hat. My

>
>1. What will the effect on the SWR / relationship to the HT be?

The hat is a bit small to form a suitable groundplane for 2m by itself,
but since it couples to your body when you wear it, it will serve as
an adequate counterpoise.

>2. Will there be less body exposure to RF? Will the metal hard hat
>shield what's left of my brain.

No! Absolutely not! The hat will now attempt to serve as the counterpoise
for the ducky. An equal RF current will flow on the hat as flows on the
"antenna". It is in fact the other half of the antenna (that's what counterpoises
do). It is also in close proximity to your head. So your exposure will be increased
in the critical eye and brain area. (Exposure to the eye is the more critical of the
two because the eye has little blood circulation to cool it while your brain has
a lot of blood circulation to deal with the RF heating.)

Put another way, consider the hat one plate of a capacitor, your head the
other plate. It will couple half (perhaps more) of the transmitter's energy
to your head and body. To act as a shield, the hat would have to enclose
your body, IE form a Faraday cage. Then the field inside would be zero.

>3. Would the metal in the hard hat be a sufficient ground plane for an
>antenna requiring one?

It is a bit small for 2m, It may serve adequately for 70 cm. Of course
when you wear the hat, your whole body becomes the counterpoise,
and as you noted, that should be large enough to serve.

>4. Would this be a good test platform for evaluating the performance of
>different HT antennas, if I were standing out in a field, away from
>other obstructions?

Only if the antennas being tested are going to be used on an identical
hat worn by a person of identical size. When used with a different
counterpoise, the antenna behavior will be different. The key fact
here is that any end fed antenna must have a counterpoise. If a
deliberate one isn't provided, the antenna currents will use what
is available. That's *you*.

I am helping K9BWI sell his FT-1000D. It is about 4years old in excellent condition both physically and operationally. It requires no factory modes. Included in the sell are:

2nd 250 Hz CW filter
2nd 2.4 kHz SSB filter
2nd 2.0 kHz SSB filter
600 Hz CW filter in the sub receiver
Level converter for computer control

Again, this unit is in perfect operating and physical condition and loaded to the max with all the options. The asking price is $3300 and K9BWI picks up shipping. You can contact me if interested. Email is dwshock@pcisys.net or 719-262-0111.

I will assume you mean 1/4 wave vertical.

A simple ground plane antenna is a QUARTER wave radiator atop 3 or 4
QUARTER wave radials. The radials should be drooped down some. This
causes the impedance of the antenna to more closely approach 50 ohms
resistive. You'll get a fine SWR reading.

If you really meant 1/2 wave then you'll need a high impedance matching
network at the base of the 1/2 radiator. The radials in that case are
only to assist in not radiating signals from your coax outer shield. Its
not worth the effort. Just put the simply GP ground plane up as high as
possible.

From: d_perrin@conknet.com
Message-ID: <71o0dm$g3t$1@nnrp1.dejanews.com>
Source record: 127029

Ten Tec OMNI A, series B. Radio has 6 poles of filtering
and a very sharp notch filter, analog readout HF transceiver.
It is in excellent condition with the manual. The recent PTO
rebuild and new dial cord makes the tuning silky smooth.
Up to 200 Watts input. Covers 160-10 Meters. $300 shipped.
Astatic D-104 mic with G/stand wired for OMNI A $25.
Station works super and looks excellent.

Nothing personal, mind you...but I would NEVER retrieve a "sensitive" file such as you're touting (an anti-virus program) from anyone other than the author or author's designee.

And this is about the ONLY time you'll ever see me use "absolutes" online.

The major anti-virus utilities all have their own official Web sites, and that's where I would go on my own to grab the latest and greatest.

Again - nothing personal. But I haven't run into ANY virus problems in over twenty years' worth of downloads, so I can't be too far off-base with my methods.

No, an amp would not "mask" the VCO's "fingerprint". However, a person
with more than one radio could confuse would-be trackers, by switching
radios. And ever more clever person, could make minor changes in the
VCO, which would cause it's characteristics to change, enough to foil
fingerprinting attempts.

Fingerprinting a QRM'ers transmitter is only useful if the QRM'er is
unaware of the technique and is foolish enough to allow himself to get
caught.

You cannot directly feed a groundplane antenna with 1/2 wave elements.
The impedence would not be correct without a matching transformer. You
can, however, make a 1/4 wave groundplane, with elements that are 1/4
wave long. In this case, you would need to droop the radials at a 45
degree down angle.

I received my Winradio last week. I'm new to the world of amateur radio
but so far my impression is very favorable. I'm actually planning to use
it for some experimental radio astronomy and its sensitivity has surprised
me. It also filters out computer interference well. I'm playing with
antenna designs now. But even with the included antenna I instantly out
did my previous portable amateur receiver.
The software is very easy to use and powerful, if you include the Digital
Suite add-on. They are also actively publishing software upgrades and
promoting their product to independant software engineers. I like that.
I'll post a more in depth review in a week or two after I get my antenna
setup configured.

---------- Sascha, why not try the manufacturer? In every instance where I have provided them with a copy of my MARS license, they have sent the information. I'm sure you're country has radio regulations much as the USA does. The following is one good reason why we shouldn't be giving out mod information.
---------- Hams help nab Connecticut jammer

It took a group of ham radio operators to finally track down an alleged jammer that had been plaguing Connecticut police communications for some time. It all took place near the Leagues' home town. Again, Rick Lindquist of the ARRL Audio News:

A Connecticut Amateur Radio tracking team called Capitol Region Malicious Interference Tracking, CRMIT helped lead authorities to a man they believe was interfering with local public safety communications. Wethersfield, Connecticut, police arrested Joel Langdo of Hartford September 29. He's been charged with criminal mischief, interfering with police and breach of peace. Langdo also could face similar charges in other communities as well as federal charges.

Langdo, a security guard who does not hold an amateur license, allegedly used a modified ham radio hand-held to transmit on police and fire frequencies used by as many as three dozen Connecticut public safety agencies. At one point, he is said to have jammed the Manchester, Connecticut, police system for 15 minutes.

Tracking down Langdo took several months of often grueling detective work and careful documentation of offending transmissions, according to CRMIT spokesman Bruce Marcus, WA1NXG, an ARRL Life Member who's in the land-mobile business. Last April, Manchester Police solicited help from CRMIT, which,

in turn notified the FCC. CRMIT helped Manchester authorities solve another malicious interference case several years ago.

Marcus said the jammer used a modified Yaesu FT-50R dualband hand-held for all of his escapades, which included playing music, airing sound from TV sitcoms, making moaning sounds, and recording and playing back police transmissions. Because the complaints were widespread, Marcus said it was not clear at first that the jamming incidents were related.

The CRMIT team used sophisticated transmitter fingerprinting equipment, and the offender helped to capture himself, Marcus said. "Its unique signature nailed it."

The offender also had a habit of broadcasting Tchaikovsky's Nutcracker Suite and certain DTMF strings.

The CRMIT team eventually was able to track transmissions to the building where Langdo lived. Marcus said federal authorities are looking into how Langdo got the radio illegally modified to transmit outside the amateur bands.

Langdo was taken into custody on September 29th.

George, if you have a legitimate need to modify the radio, I'm sure that
Yaesu would be happy to send you the information. Just send them a copy of
your MARS or CAP license - its that easy. Here is a reason not to modify it,
however:
---------- Hams help nab Connecticut jammer

It took a group of ham radio operators to finally
track down an alleged jammer that had been plaguing
Connecticut police communications for some time.
It all took place near the Leagues' home town.
Again, Rick Lindquist of the ARRL Audio News:

273. Re: Has anyone had experience with Tripp Lite 13.8 V DC power supplies?

Newsgroup: rec.radio.amateur.equipment
Date: 1998-11-03 00:00:00 UTC
From: Ralph Mowery <rmowery@ibm.net>
Message-ID: <363FA057.E4A1EED1@ibm.net>
Source record: 127053

If you don't like the Astron, you won't like the Tripp-Lite. They are basically the same design. Tripp-Lite seem to use less heavy components than Astron. The Astron units seem to be able to run near their rated output with out overheating. The Tripp-Lite units need to be derated if you are going to use them. I have had an Astron on a mountain site powering a repeater and it had a bad habit of tripping the overvoltage crowbar. It would set there for a day or so before I would get to it and reset it. I think it was because if the AC power was cut off and right back on it would trip the crowbar. A TL powersupply was used to replace it and it does not seem to have that problem. Has been in service for about the last 8 years. Only run it at about half the rated power under full load while the transmitter is on.

Don't know what you call a decent circuit. There seems to be only a couple of common ways to do it. Use a 723 voltage regulator and some pass transistors.

274. Re: Cigarette lighter socket for power connection for mobile radio?

Newsgroup: rec.radio.amateur.equipment
Date: 1998-11-03 00:00:00 UTC
From: Ralph Mowery <rmowery@ibm.net>
Message-ID: <363FA201.8CD4F3CD@ibm.net>
Source record: 127054

Which manual ? The car or the radio. Many of the radios are now drawing more power than the wiring in the car is rated for. Put a 50 watt fm rig in the car and had a lot of alternator whine in the transmit signal on hi power but not at the 5 watt level. Ran a wire to the battery and put a relay in it so the rig comes on with the key, no whine at hi power. Some cars, I have heard,switch the plus and negative leads going to the lighter and it is as if you reversed the leads going to the rig. Instant smoke.

> Any reason why I should not use the cigarette lighter socket for power

i have a th79 , i've been using it for over a year now and i really like it. i
do wish it had a backlit keypad but i can get by without that.
i have looked at the thg71 but i like to be able to scan both bands at the same
time and also i like the bnc connector rather than the sma connector
just my two cents worth....

Hi Paul,

Ever Consider Surplus BC-610 Tank coils w/swinging link?

They are plug in and will handle a few kw AM.

As I recall they are at least 3.5" ID

The outer coils are connected to pins 1,2,5,6 of a "6 pin strip
connecter" the inner swinging link is connected to pins 4,5 of the same
strip connector. The swinging link is for matching 50 ohm coax.

Check out boatanchors.

I bet you'll receive a lot of different answers on this question. <smile>

There is not one ideal radio for everyone, so each Ham will give different answers. For a new low cost HF radio, I like the Tec-Tec Scout. The Scout with a noise blanker, mike and one band module sells for about $600 new. It's strong points are: it's easy to use, low cost, and works well. Some hams do not like the fact that you must purchase a module for each ham band you use ($29 + shipping), if the radio gets too hot during CW, it will jump a little in frequency, and if you purchase every HF band module, the radio costs about the same as the Alinco DX-70. (The Alinco DX-70 covers all the HF Bands and gives you 6 meters too.)

While the Ten-Tec Scout may not be every Ham's ideal radio, for those of us who own one and use it, it's a good starter HF radio, as well as an extra HF radio for the car.

"Richard LaSaracina" <RichieLA@email.msn.com> wrote:
> looking to get involved with atv in Connecticut

Please check out the following link:

http://www.ac6v.com/pagew.html#A

This will take you to a list of WEB pages that links to other WEB pages about ATV. This may not be the most direct route to get you there, but as you search through the different ATV WEB pages, you'll learn a lot.

While a lot of Hams into ATV use ATV repeaters to chat, I use ATV in symplex mode. Not so much for chatting, but for events and just "playing" around.

My first ATV Project was to put a small ATV transmitter (80 mW) on a remote controled car with a small TV camera. Using my TV set as my driver's view, I drive the car. Well, I try to drive the car. My kids are better at it than I am. By the way, if you ever want to show kids about Ham Radio, this is it. Kids love this thing!!!

COSTS: 80 mW ATV Transmitter under $100, Color TV Camera about $140 (I've see Black and White cameras for around $50.), Large Radio Shack Remote Controled Car about $100.

My remote controled car doesn't need a lot of range, but PC Electronics does sell a 1.5 W ATV Transmitter for about $170. These Transmitters are just the boards, you need to add other stuff from the electronics junk box.

A 1.5 W Transmitter is about the right power for working many events, like I do. It's really cool to be able to show Net Control a ctitical location in a race or a key location in a parade. It's also, just fun to show off Ham Radio. I've seen other Hams create a "Ham Cam" where they walk around with their camera and transmitter.

Some fellow Hams and I did play around with sending live video from my car. We haven't tried for any real range yet, but did test this in a flat area of where I live. After 2 miles, they were still getting an image. We didn't test this to see what the maximum range is.

While this might seem a bit crazy, there is some logic to our tests. Our local emergency communications group is testing ATV for use in an emergency. The Police Department is very interested in our tests. So far, we've produced some good results; which may end up being useful in a real emergency. We hope to be able to provide live video should

an emergency require it. I live in Southern California and the chance of an earthquake is very likely. While I would never hope for any quake to come to our area, if it happens, I'd sure want to help in what ever way I can.

I hope you'll get a chance to surf through the different links about ATV. If there are ATV Repeaters in your area, you can enjoy that, but if not, there are MANY ways to enjoy ATV without ever using a repeater.

73,
Bob

The first place to go is; HTTP://www.arrl.org
You'll learn all about ham radio there!

>The first is what kind of license do you need to use a handheld radio.

Technician class or higher.

>The second is how do the phone services work, and with them who all can you
>call?

Autopatches are made through repeaters using a series of key presses.
Unless an emergency you usually have to be a club member to use them.
Membership dues are normally fairly cheap. Local calls are usually only
allowed. Autopatches are supposed to be VERY short, they are not made for
staying on and shooting the breeze. They are normally used to call for help,
report accidents or fires, things like that.

Ed:

Not always the case... I have a PCR-1000 running in my computer room, using Radio Shack's magnet-mount, dual loading coil, scanner antenna... sitting on top of my file cabinet. It works super, and computer interference is at an un-noticeable minimum throughout most bands. Granted, my computer is FCC approved, and shielded, but not more than most I've seen.

Yes, it does. I've had one for about six years and love it, although
they're no longer in production and getting a bit old. It has all the
bells and whistles you'd ever want. The asking prices I've seen vary
a lot, anywhere from $1400 down to about $900. Be sure to get one
with the built in antenna tuner - it works great.

I don't know who or what you are, but a historian you are NOT. The FCC--you know, that entity that regulates the electromagnetic spectrum in the USA- first proposed Incentive Licensing in 1959-about the time you were eleven years old. The ARRL entered the scene as it always has--as the advocate for hams, and most of the details of the plan that was adopted came from the FCC, *NOT* the ARRL. In fact, ARRL persuaded FCC to drop succeding phases which would have caused even more pain to some hams. But it gives you a good excuse to inaccurately bash the League, and complain, to say nothing about braying your license class about. If you held a pre-Incentive extra, and that seems unlikely, you had one of some 4,000 then issued. Most were held by commercial CW operators, and there was no real reason for mainstream hams to concern themselves, after all there was NOTHING to be gained except the "prestige". And for most people "bragging rights" are worth what they apppear to be worth--not much.

So stay away from the ARRL-- they'll continue to work for the best interests of all hams anyway, you included--if they can figure out what those interests are, given all the garbage being spread these days.

Anybody out there put one o these on the ham band? I have identified the following to change/retune:

Duplexes(obvious one)
Preamp
Injection filter
Harmonic Filter.
Exciter Filter
RX input helical.
Exciter offset xtal(go from lo rx to hi rx.)

Anybody tune one of these duplexers down from 463/468 to 443/448?

I use mine on 18 MHz. There's enough play in the tuning that you can
get about 3/4 of full output on it. Modifying it for 10 meters messes
it up for 18 MHz though. 10 MHz is poor on the 922.

Newsgroup: rec.radio.amateur.equipment
Date: 1998-11-03 00:00:00 UTC
From: py1ll@my-dejanews.com
Message-ID: <71mpsg$pk4$1@nnrp1.dejanews.com>
Source record: 127124

I have a TS140-S that works fine but (I guess) it presents a band limiting problem. For example, on 40 m, it transmits below 7,000 KHz. The transmitter stops operating only when the frequency is well off the band, say 6,500 KHz. All the diodes were tested and seem to be OK. I have also performed a suitable reset (confirmed by the CW info) but the band limits stay the same.
As the manuals don't say anything about it, I ask:
- Is the band limiting OK?
- If not what to do for correcting it?

Thanks,

Luiz - PY1LL

Hi there :)
I'm an electronic musician seriously searching for old SYNTHESIZERS,

KEYBOARDS, drum machines, analog sequencers, vocoders, unusual old

effects and all related electronic musical equipment (MIDI and pre-MIDI).

In general, I'm looking for working or non-working instruments made in the

late 60's, 70's and early to mid 80's. Machines with KNOBS, SLIDERS and

especially ~PATCHCABLES~:

The more unusual, the better.

_Moog

_ARP _sequencer

_EML-400 _Electrocomp _sequencer

_Korg _SQ-10 _analog _sequencer

_Simmons SDS5, 6, 7 Drum Brains
_Theremin
_ANYTHING SIMILAR!!

Also looking for old publications on electronic music, magazines, product brochores, other information.

If you have any of the above or similar equipment which you'd consider selling or know where i could find some, please email me at rolandman1@aol.com

If you'd like to, please include your phone # since my email has occasionally been unreliable in the past.

Thank you very much for your time and I apologize if this message annoys

anyone.

> > though...

Most problems of grunge while tuning are due to leaks from the radio due to plugging stuff into the back. Try tuning the radio with nothing plugged into the back except the antenna spigot. When you plug in something, e.g., a speaker, keyer, etc., and find that the problem recurs, do some serious ac filtering to the offending leads coming out the back of the radio.

Dear Sir

I am looking to purchase a used CLEAN kenwood 950SDX
preferable in the tristate area NY NJ CT (east coast)
since I will be coming for Christmas to visit my daughter
who lives in Long Island NY, so it will be easier for
me to get in eye-contact with you and the "goodies".

Please let me know of the
1.date of purchase
2.serial number
3.and of any accesories (service manual,desk top mic-speaker,etc)
that might come with it.

Any suggestions wellcome.....

Please respond preferable direct
email sv1cvy@tee.gr or mdim@intranet.gr

THANK YOU IN ADVANCE

Yes. It's overly hyped by the *media*, let alone the ever-
paranoid survivalists. There will be some problems, but they
won't amount to diddly compared to the dire warnings we've
been subjected to. Perhaps your dentist's computer will
choke on the monthly billings. Maybe even a bank or two, or
a few large corporations. They'll figure it out and life will
go on. Critical infrastructure like power, telephone and
public safety will be fine. The wild y2k parties will far
exceed any computer glitches in their impact on society.

Bob, KI8AB

I've never used HF digital modes, so I'm no help there.
maybe I should get set up, "just in case"?

327. WTD: Relm/Regency/Wilson RH256 computer programming info

Newsgroup: rec.radio.amateur.equipment
Date: 1998-11-03 00:00:00 UTC
From: mroberds@worldnet.att.net

Source record: 127133
Cross-posted to: rec.radio.scanner,rec.radio.amateur.equipment

Hello all!

I have a couple of Relm RH256 16-channel VHF radios that I'd like
to program. I already have most of the information on how to set
the internal jumper and program it via the keypad. The keypad
programming seems to work fine on both radios. But I've seen
a couple of these and other Relm radios with a print-out of the
frequencies and options installed, and the print-outs are identical
in form (not content, obviously). This leads me to think that
there is some way to program these radios with a PC and some software.
I already opened up the radios and looked for a handy silk-screen
saying "Connect RS232 here and set for 1200 8N1". No such luck. :)

Does anyone know if programming these radios with a computer is
possible? If so, how do I hook it up? Can I use a serial port,
a terminal emulator and ASCII or do I need special hardware or
software? Any information or tips would be appreciated. Thanks!

I'm dying of curiosity, so forgive me, but I have to ask ...
so many people are interested in extending the tx freq's of
their HT's. Are they *all* planning on using transverters?
Do so many people really need MARS/CAP? Or is there some
odd fascination with having illegal equipment, even if "I
won't transmit illegally". Clues for the clueless?

Jim,

The TS940 is considered to have some of the best sounding tx audio
(SSB). Kenwood radios of its day always had good audio and the TS940
may be the best of that lot.

Also for RTTY, the 940 can run full power key down for up to an hour.
It can run 50w key down forever (almost).

For a non-DSP rig, it has great analog noise reduction features.

I also find that the user interface is easy to learn and use -
something I don't particularly find with the TS870.

Trying to run a dual band mobile (50w). See.. this is the company car... don't want to do a full install on it. At the same time, I don't want to runin my radio either! When I plug it in, it doesn't take long to light the radio up - if that's what you mean.

I see these DC - AC converters that plugs into these same cigarette lighter sockets and they run 110-120v off it for laptop computers, TV, refrigerators, etc... ?? How do that do that?

I understand about the company car bit. A 50W transmitter will probably run around 10amps current. The highest current rating I have ever seen for a cigarette lighter plug is about 6 amps. The problem is not so much in the wire, but in the plug and connection. Remember, the only thing making an electrical connection for your radio are two small pieces of metal held in place by friction of the spring type action of the ground side of the plug. If you take one of those plugs apart, you can see fairly small connections. These create resistance at higher currents, dropping the voltage and heating up.

My recommendation would be to run at a medium power level, say 10-15 watts, certainly no more than 25 watts and use a gain type antenna.

> I see these DC - AC converters that plugs into these same cigarette
> lighter sockets and they run 110-120v off it for laptop computers, TV,
> refrigerators, etc... ?? How do that do that?

The converters draw relatively little current. The larger ones that can run refrigerators, microwave ovens, etc, have to be hardwired to the battery. I recently worked on an evidence van for the local Police Department. It had a 1000 watt inverter in it, and each 13.6 volt lead going to it was about as big around as my index finger.

I have a Yaesu FT-23R which came with an FNB-12 battery pack. Most of my friends tell me that their 23Rs on normal squelched receive last quite a while (many over 2 days) on the FNB-12 battery pack. Mine only lasts a couple of hours at the most, which makes me wonder whether the battery pack is coming to the end of its useful life.

Packs are quite expensive and I've been told a viable solution is to go to your local electronics store and buy the NICADs the pack needs and simply change them. I would like to do this and have already found a dealer which will sell the me the NICADs... only that I don't know how to start taking apart the battery pack.

A while back I had found a text file on how to take the Yaesu battery packs apart... but I seem to have lost it. Does anybody have this text or experience disassembling these battery packs?

This is not brain surgery.
The manufacturer says don't do it!
You don't have an option!
Either you do it or you don't. My experience or opinion won't help
your situation.

Having said that, I actually do have an opinion. Run low power.
At 5-watts, you surely won't have a problem with the current drain.
Pay attention to where you stick the antenna, make sure it's properly
tuned
and use the highest gain you can get.

Clint Think about what you are saying. You have free will - nobody
is making you do anything. Almost every ham page I have ever seen
has direct links to other pages. It is far easier to simply click on
a link of interest and quickly go where you want to. This is done
for the convenience of the page visitor and for no other reason. As
a matter of fact, that is the fundamental premise of the WWW. Links.
Like you said....Oh, well!

The following items are for sale, prices do not include shipping, e-mail direct if interested:

Two Hy-Gain "Hy-Quad" antennas, one completely rebuilt with 14ga 168 strand
"Super Flex" wire, one needs new wire. $200 for the pair.

Homebrew RF-Deck uses pair 4-125's, about 500W out needs HV supply: $150.00
(The parts in this thing alone are worth $150.00)

Unbuilt Heathkit 5-Position Rotary Coax-Switch $50.00

Heathkit DX-60B w/matching HG-10 VFO: $120.00

Heathkit AM-2 Swr Meter: $10.00

Heathkit HN-31 "Cantenna" dummy load $25.00

MFJ-16010 300W Random Wire Antenna Tuner $25.00

HTX-202 HT in good condition, with external hand mic/spkr
w/2 batteries. The batteries for this need work, so only $65.00

Linear Amp Parts (sold as set, will not split): Pair of 4CX1500B medical pulls, w/1-Socket/Chimney,
Peter W. Dahl Plate transformer a 115/230 VAC primary and a 1250 VAC @ 1.5A CCS secondary
8-1500mfd @ 450V Computer Grade caps, pair of 5KV block diodes,
pair of ducted blower fans (pulls from military equipment) all for $400.

I vote in the primary. I vote to get rid of the weasels.

I never vote in a general election. After the primary, I don't
really care who wins. If your candidate loses the primary,
it really doesn't matter who wins. Jack-Ass or GOP, they both
are part of the 5 Trillion dollar problem.

In Oregon, you don't have to vote anyway, as the candidates
are already elected before the polls open.

I put together one of these hard hat/rubber duck combos about 10 years ago. I got acceptable results, but actually used it very little. It's best use is for striking up conversations at hamfests and providing entertainment at field day and other such events. I would be wary of problems from long term/extended use on what little brain I have left. I would suggest you do something like mount the antenna on a large metal plate and run a coax from there to the HT to get away from the effect of your body acting like a counterpoise.

> George, if you have a legitimate need to modify the radio, I'm sure that
> Yaesu would be happy to send you the information. Just send them a copy of
> your MARS or CAP license - its that easy. Here is a reason not to modify it,

There is no reason to modify it for MARS/CAP or FrEEband use, although the information can be found almost everywhere. I even make the unoffical FAQ about modifications.
There is absolutely no need for one to modify the radio to do mars/cap ro even freeband. Most do it for shits and giggles, they just like making their equip jump through hoops for them. Some don't have a life and listen to cell freqs all of the time. But a few out there like to cause mischief and anarchy. They like to transmit out of band, etc. It's those few that really do the whole radio community a great disservice.
My faq is provided for two reasons, for those who would like to know more about the FT-50, and for those who are moving from one country to another and need to change the radio's country code to match. Yes, I also detail info on the FrEEband mode, but I do it for informational purposes only. I in no way support out of band operation in any form, other than legit uses.
In my next release of teh faq, I plan on emphasizing the legality of the modification, and spitting on thise who use it's information for illegit use.
It can be downloaded at http://www.blarg.net/~tdragon/faqs/
BTW, the newer radios /can not/ be modified for either cell reception or FrEEband mode. I recieve at least two e-mails every day saying "I just got a brand new ft-50, can it be modified?" No, cell reception has been blocked on /all/ country bands, and the FrEEband mode has been totally removed. Sorry, but all you can do is set it to Canadian (05h) to allow 200-299.995mhz reception withotu affecting the legal TX limits. You can also remove the blob of solder to allow Mars/Cap mode if you so desire, but it's illegal to even do the mod unless you have a liscense to do so.

Rob,

Sounds like the tuner might be getting hot, if there's a really difficult antenna match to the relatively short mobile antenna. Your base antenna is probably longer, and therefore an easier load to match. As long as you don't key down for long enough to heat it up, it should work fine.

Are you able to setup the antenna itself so that you don't need to use the tuner? If you can, do so -- it will give the tuner an easier load to match the transmitter with.

Paul

HELP HELP HELP HELP HELP HELP HELP HELP HELP HELP HELP HELP HELP HELP

I have got one of those wonderfull old FT 757GX.

The problem is, that someone has stolen his brain.

I mean the CPU is missing. :-(((((

Yaesu told me that this CPU is not more avaible. :-(((((

So what can I do ????

I will not put it in the trash.

Is it possible to make a copy from one original CPU ?

Or is it possible to get the Software to make a piggy packed board
with a 6805 standard cpu and an external eprom ???

It will be very nice if someone can give me some help.

I hope my english is god enough to tell you my problem.
BTW. That's the only english I have. :-))

This is normal for this model and for most models. The legal band limits are
narrower than the transmit-enabled limits.

Mike, even if you mod the '32 to tx on aviation freqs, your results will be lousy at best!
Remember, aviation communications, unlike most other services, use AM, NOT FM.
There is no practical way to get the '32 to tx using AM(the circutry is just not there).
I know that the '32 can RX in AM, but that's way simpler, so the cost for the manufacturer is minor, so most of them do it now.

By joining the ARRL, you can't change anything. You will get a magazine
subscription.

ARRL membership are sheep. Just look at those in Director positions.
They are all in-bred.

You won't change anything, and all the sheep vote for the incumbent 99%
of the time (or don't vote at all). 1 vote means squat in the big picture.

Wrong.

>You will get a magazine subscription.

Yes, that's one element of membership.

>ARRL membership are sheep. Just look at those in Director positions.
>They are all in-bred.

MOST volunteer organizations are the same when
it comes to getting VOLUNTEERS willing to put in
the time and effort needed for the position. I was national
president of a sports car club. I NEVER was opposed for
office AND my successor wasn't either.

>You won't change anything, and all the sheep vote for the incumbent 99%
>of the time (or don't vote at all). 1 vote means squat in the big picture.

That's the same bull that many people spout as to
why they don't vote in any election. The reality is that
every vote adds to the TOTAL and I've seen votes
as close as a handful that made the difference.

So I'll reiterate Marv, KC0EGB's post...

Nick:

I've owned a W32A for just over 2 years and like it.
... has plenty of memories
... display has excellent readability
..... keypad and display are well-lit
..... has neat features like CTCSS tone scan and alphanumeric
labelling of memory channels
.... automatic squelch setting is great, no need to fiddle with a
squelch control
..... 5 watts Tx power with standard BP-173 battery
..... great sensitivity everywhere, including 800-950Mhz band, cell
excluded
..... cell band is blocked but images can be received starting around
961 Mhz
..... scanning rate is fast

And now some gripes:
..... the downside of good sensitivity is front end overload and
desensing when connected to an external antenna.
...... speaker loudness could be improved
...... cannot program offsets for out-of-band repeaters, must use a
memory channel

Al, W2JUV

So you are telling us you don't vote?
Those who do not vote should have NO voice.

>That's the same bull that many people spout as to
>why they don't vote in any election. The reality is that
>every vote adds to the TOTAL and I've seen votes
>as close as a handful that made the difference.

Do you realize that in Amerika you speak English (for the most part) because
it won out over German becoming the national language of this country....BY
ONE VOTE!

Andrew Johnson was saved from impeachment BY ONE VOTE!

By ONE VOTE my ex-wife's vote gets cancelled...

The list goes on and on....

Ah, but you say my vote gets canceled in the process....but does it really?

Bleh heehehe hehehe

Of all the ideas you've listed, including renting GMRS sets, buying
FRS sets or finding licensed ham operators to help out, only the
amateur radio solution is legal. Non-voice data transmissions are
not allowed in GMRS or FRS (or in the Radio Control or CB services).

I'd guess that passing the Tech quiz's would be a breeze for you and
others in your team and you may even have fun with the hobby.

I might have a manual for that radio. The biggest challenge will be in programming the EPROM for it. There are 64 chans, freqs, the PL's, scan, etc. that are all in the EPROM. I've never tried to burn a new one with anything other than the Standard A-3400 (I think) burner. Drop me an e-mail at <ve6inm@aol.com>and I'll see if I can find the manual. 73 de VE6INM

If you havn't checked out CB City lately, you may want to drop in and say hello. We have been adding a lot of new sale prices as well as making it real easy to look for items as well as post items that you have for sale on the SwapShop.
We have added ECG Cross Reference as well as a Tube Substitution area. There are a lot of other new things, but you will just have to stop by and take a look.
Come by and see us at CB City, you will be glad you did.

http://www.cbcity.com

See You There!

>was really tough on the ears.

I have one of the Astron 18 A switchers, not the MFJ. When turned on
with no load, there is a slight "crackling" sound as the regulator
turns itself off and on many times per second. Once you supply at
least a few hundred mA of load, the regulator can operate properly
and the supply becomes completely silent. There is a fan that is
supposed to come on at high temperatures, but I've never seen the
supply get anywhere near hot enough to need it.

I found that I didn't like using this supply to power an HT plus
an RF amplifier, because the current was so low on receive that
the supply started making the noise described above. A linear
supply would likely be better where there is such a huge difference
between receive and transmit current (40 mA vs. 10 A).

But with a mobile rig that draws about 1 A on receive, the Astron
becomes completely silent. And it remains silent at full power
transmit (12 A) as well, which is better than my linear supply
which hums quite audibly when you draw near its rated output
current.

I don't know exactly what question you're asking, but if you're wondering how many watts your radio will make with six AA cells, it depends on the radio. Most HTs will make several watts with 9 volts. If you really want to know, consult your operating manual or enlist the help of a fellow ham with a wattmeter.

Each alkaline AA cell is good for about 2.4 amp-hours. Six of them are good for about 22 watt-hours, depending on what kind of load they're discharging into...but this is the battery it-self and has nothing to do with how well your HT is going to convert 9VDC into RF watts. Does this help?

404. Grove Scanner<>SW convertor quandary

Newsgroup: rec.radio.amateur.equipment
Date: 1998-11-04 00:00:00 UTC
From: scott coburn <scott@bnl.gov>
Message-ID: <36408DD3.11B28217@bnl.gov>
Source record: 126977

I recently picked up a Grove CVR-2 convertor at a yard sale (cheap).
It has a 4-20MHz/118-134MHz "conversion" scale printed on the front
of the case, an antenna input, and a "to receiver" output.

I couldn't tell from the case whether this gizmo converts scanner freqs
to SW freqs, or the other way around. I sketched up the schematic
by tracing the PCB traces hoping for some insight. It has a simple
one-transistor stage feeding the RF input of an SBL-1 mixer, and a
38MHz one-transistor oscillator feeding the LO input. The "to
receiver" panel connector is connected to the IF output of the SBL-1.
It seems to use the third harmonic of the LO input (38x3 + 4 = 118).
There is no filtering on the output of the IF of the mixer, or on the
RF input.

Given this schematic I still could not decide which way this thing
converts. Then I thought that perhaps it could be used either way.

So, does anybody know if this convertor could be used in either
direction (scanner<>SW)?

Thanks,

Scott

Thank you for the information.

Hmmmm... Any suggestions for the best radiating, least damaging to your body, method of placing the antenna / radio for use in the field?

How about a plastic hard hat, with a half wave, or 1/4 wave ground plane mounted on top?

The danger is that it's not the best source for a good solid electrical feed. It all depends on the model car you have. In some cases, the power might be really clean, but in other cases, it might have a lot of noise, the voltage may vary way above (or below) the 13.8 volts, or it may have some very bad voltage spikes in it.

I do know of fellow Hams that have used the cigarette lighter socket for their power connection. In the cases of the few that do it, they haven't had any big problems. However there are times that I here a whine sound in their signal. I cna't be 100% sure that wiring direct to their battery would solve that.

I do it very differently. I purchased a 12 deep cycle battery and a small 10 watt solar panel to charge the battery. The radio's electrical is not connected to the car's electrical system, thus, I never have problems with any whine from the car getting into my system. I've been running this way for over a year without any problems.

I have been using my DX70TH for a few months. I got it to install in my car, but it was pressed into service as a backup base rig when my Kenwood TS850 broke. My opinion so far:

Good value for a mobile HF rig, but as a base station one can do a lot better for the money with a used rig. It was a rude shock to compare it to my TS850.

Rick:

I have been using my DX70TH for a few months. I got it to install in my car, but it was pressed into service as a backup base rig when my Kenwood TS850 broke.

My opinion so far:
Good value for a mobile HF rig, but as a base station one can do a lot better for the money with a used rig. It was a rude shock to compare it to my TS850. It benefitted greatly from addition of external DSP (NIR-12).

Also, Alinco really stiffed me by ignoring my request for a warranty repair of the connection cable which was defective out of the box. So I wouldn't expect much in the way of support from them. They were a real disapointment! I'm still pretty annoyed about it - can't be more than a $5.00 item.

I called Yaesu, because I had a problem with an old FT-301D. I left a message in the voice mail, and thought maybe some time in the future they would call me back. Within two hours, TWO people called me back, and actually got a schmetic to look at with me. I have come to expect this type of response from Ten Tec, but hats off to Yaesu for the service they provide us hams. Frank KG9H

413. FORSALE - MINT Kenwood TS-520S + VFO-520S, great starter rig

Newsgroup: rec.radio.amateur.equipment
Date: 1998-11-04 00:00:00 UTC
From: jpl@hoserve.ho.lucent.com
Message-ID: <71qa0r$gr@nntpb.cb.lucent.com>
Source record: 126986
Cross-posted to: rec.radio.swap,rec.radio.amateur.equipment,nj.forsale,rec.radio.amateur.boatanchors

I have a mint Kenwood TS-520S plus the optional matching remote
VFO-520S that I would like to sell. In my opinion, the 520
and 520S are some of the best rigs around and would make a
fantastic beginner station or a great backup rig.
The remote VFO is a wonderful option to have and gives
the capability to either run split frequencies or to flip-flop
between two frequencies.

For any novices not familiar with this radio, it is all solid state
(discrete components, so its very easy to repair if ever needed)
except for a tube driver and a pair of very
robust 6146 tubes as the finals. It has a builit in power supply,
but can also run off of 12VDC with an optional DS-1A
DC-DC convertor (not included). It also has connections for the
Kenwood DG-5 digital display.
It covers 160,80,40,20,15, and 10 meters in CW and SSB (upper and lower) modes.
The receiver section is excellent and I always get excellent audio quality
reports. Many folks say that these older Kenwoods are some of the best
sounding rigs on the air.

This rig also has the optional 500Hz CW filter
installed (genuine Kenwood option).

The price is $400 firm + shipping. You might find one for a few $ less,
but NOT is this great condition.

Help,

I am using this rig in the mobile
with a Valor 40M whip and a magnetic mount base.
If I use the tuner I get a flat SWR initially.
If I hold a carrier for approx 1 Minute
the SWR climbs sky high.

I have checked the rig,coax(pl59),as well
as attaching a separate ground wire to the rig.
I can take the rig into my shack and
tune it up and down all bands with the
tunere and hold carriers with the SWR flat.

Nothing works. This does this on all
bands but is expecially bad on the 40M whip.
Yes, I have changed the magnetic mount base with coax
as well as tried other new whips.Nothing has helped.

Anybody have any ideas??
Thnx
Rob VE3-LUA

As a comparison, I purchased a Drake MSR/FM-P (which I believe is an MSR-2 upgraded to receive Narrow Band FM transmissions) which was in mint condition for $650.00. I don't know if the "collector value" of an MSR-2 makes it worth more than the MSR/FM-P, but I'd research it before paying this much for one of these.

433. Help: 2950 Ranger sidetone audio

Newsgroup: rec.radio.amateur.equipment

434. List of the rec.radio newsgroups

Newsgroup: rec.radio.amateur.equipment
Date: 1998-11-04 00:00:00 UTC
From: jeffreyh@Hawaii.Edu
Message-ID: <71orak$lks@news.Hawaii.Edu>
Source record: 127087
Cross-posted to: rec.radio.amateur.equipment,rec.radio.amateur.homebrew

```
Archive-name: radio/personal-brief-introduction

In an effort help ensure a poster's article reaches the appropriate
audience, below is a list of the rec.radio newsgroups. In most cases,
a group's name will explain its purpose. Cross-posting should rarely
be necessary.

rec.radio.broadcasting (devoted to the broadcast industry; moderated)
rec.radio.cb
rec.radio.info (periodic informational bulletins; moderated)
rec.radio.scanner
rec.radio.shortwave
rec.radio.swap (for buying, selling, and trading; not a discussion group)

rec.radio.amateur.antenna
rec.radio.amateur.boatanchors (tube-type communications equipment)
rec.radio.amateur.digital.misc (packet, pactor and other digital modes)
rec.radio.amateur.dx (long-distance amateur communications)
rec.radio.amateur.equipment (questions, comments regarding commercially-
built amateur gear; not for buying/selling)
rec.radio.amateur.homebrew (devoted to home-building ham gear)
rec.radio.amateur.policy (issues include code, restructuring, local
restrictions in conflict with FCC R&R)
rec.radio.amateur.space (satellites, meteor scatter, EME)
rec.radio.amateur.misc (any topic not covered in the above groups)

(At least two other English language radio hierarchies exist, prefixed
with "uk" (United Kingdom), and "aus" (Australia), in place of "rec.")

Again, cross-posting should rarely be necessary. Many times, a long-
running thread results from a single cross-posted article, and the
contents of such a thread drift further and further away from being
"on-topic" in the various NGs that receive each and every followup.

For more detailed information, see "Guide to the Rec.radio Newsgroups"
posted on the 15th of each month.

Jeffrey Herman (KH2PZ / KH6)

439. Re: Top Five Startup HF Rigs

Newsgroup: rec.radio.amateur.equipment
Date: 1998-11-05 00:00:00 UTC
From: "James L. Griffith" <griffithj@ricks.edu>
Message-ID: <3642072E.27A77AE7@ricks.edu>
Source record: 126793

Hi, Russ
I own two of the radios talked about here. The TT Scout, and the TS-520S. Both rigs are good. I bought my Scout, used with 5 modules, mic, and mobile mounting bracket for $450 off the group. The rig was in like new condition. It works well, except at faster CW speeds is tends to change frequency at bit on TX. The receiver is very good, and some complain about using it to close to other rigs in operation, I never do that. I dumped a TS-450SAT because the receiver, and it phase noise, did not could not compare with an older tube rig I used for CW. On the 450 really weak signals are not there with lesser antenna systems. ON the Scout and TS-520S the receivers are both good performers on weak CW signals, and the scout will allow one to very the filter, on one knob, and have just one CW signal to listen to out of a several very near together. I like my TS-520S also. It is a very nice radio. The Truth is I am in the market in the spring for another rig. I am not going to get a DSP radio I have narrowed it down to three rigs for me. They are not for every one. It like food. I like HOT spice food, most do not. Ham rigs are the same way. My choice for my next rig to keep for a good length of time, with money being a factor, will be a used radio. I think most of the good radios have already been made. My choice for the money I will spend is between a TS-940SAT, TS-850SAT, and the TT Omni 6. After one of these radios I don't need another. And I am being careful after the TS-450. The 450 is a nice mobile style radio with a phase noise floor. I look for weak CW and operate it on Dipole antennas. That radio could not do that, the Scout, 520, and the above radios can. I am sure their are a lot of other rigs that also can do that also by they are not in my experience. It's kind of my test without test equimpent.

443. FS/FT: Japan Radio JST-100 Transceiver

Newsgroup: rec.radio.amateur.equipment
Date: 1998-11-05 00:00:00 UTC
From: tony@bright.net
Message-ID: <71t53j$np7$1@cletus.bright.net>
Source record: 126797
Cross-posted to: rec.radio.swap,rec.radio.amateur.equipment

Greetings,

I wish to sell my Japan Radio JST-100 transceiver, as my operating time is increasingly consumed by Boatanchors and Ancient Modulation. :-)

The JST-100 is a high quality 160-10 Meters ham band rig, with 10 MHz receive for WWV. The JST-100 also receives the WARC bands and can be modified for transmit with a simple "diode clip" modification. This transceiver is seldom seen in the U.S., and I purchased this unit used from Universal Radio here in Ohio. The transceiver is in excellent operating and cosmetic condition, and I have the JRC hand microphone and manual to go with the rig.

I'm asking $600 shipped to the 48 contiguous States, or will swap for other JRC equipment (especially NRD-515, NRD-525, NRD-535, or commercial RX), or interesting boatanchors of equal value.

Please reply via e-mail to tony at bright dot net.

Thanks & 73,

Tony N8SNC

Adjust LCD Contrast VR303 on main cpu board assembly
It is according to the service manual located right next to the mic input jack on the main cpu board. There is also a test point located below and on the edge of the cct board marked TA. Your adjustment should read 1.5v at this point.

Hope this helps.
P.S. This info is taken right from the service manual. Please note that there may have been changes to the manual and your version of the radio. If not sure Please have a profesional do the work.

Tap on one side of the seam to break it apart all the way around with a small flat blade screwdriver. You should be able to tell which side is lapped over which and tap on the lowerside of the seam.Easier done then discribed. When you go to reassemble it, you could chemically weld it back together with a small amount of MEK(methol-ethal-keytone) if you like, by clamping the pack together and applying small drops IN the seam and let dry..about a couple of hours, till it hardens.If there is a big gap it can be filled with some old black plastic dissolved in a little bit of MEK and used like glue..Hope this helps..73

459. RF Grounding of equipment

Newsgroup: rec.radio.amateur.equipment
Date: 1998-11-05 00:00:00 UTC
From: Stormhound <stormhnd@sound.net>
Message-ID: <364252C7.9AAFE5D2@sound.net>
Source record: 126813

Whilst I wait for the FCC to grant me a call sign, I'm considering all the lovely factors in setting up my own little base station, and the one question to which I don't yet have a good answer is that of RF grounding of my equipment. After some looking around online, I haven't found anything that makes me feel certain of a good solution. Here are the parameters of the question:

1) Station will consist of a 2m/440 50W mobile used as a base, an 11A power supply, and a small ground plane antenna to attach to my old steel filing cabinet. The wiring in the apartment is good (and <10 years old), so electrical grounding does not appear to be a problem. All equipment new, power cables new, and so on. At this point, I'm assuming I'll have to run on 5-10W to avoid RF radiation problems (I have upstairs neighbors); I can live with that.

2) The apartment complex I'm in looks with extreme disfavor upon any sort of outside "decorations", which would include wires running to ye olde 8-foot ground rod. (This is also why I'm starting on VHF...can't put up an outside antenna) They also frown upon people seeking to drill holes and such in their walls.

The potential options I've seen or thought up...none of which, as stated above, leave me feeling certain of having things solved, are:

a) Cold water pipe. Unfortunately, there's no way to avoid running a minimum of 10-12 feet of wire/braid to reach one, and it's over 20' if I don't rearrange furniture.

b) Frame of an electrical socket. Closer to the rig, but I have no way of knowing how far from there to true ground.

c) Wire screen in window with aluminum frame. Can't tell if there's any real path to ground from that point. And the thought has the feel of creating a second antenna.

If I can't find an answer that leaves me feeling certain of having done what a good ham's supposed to do in addressing such problems, I suppose I can always get myself an HT, but I'd really rather do that as a last resort only. Any good ideas and discussions will be greatly appreciated!

73,
Dave

464. Wanted: cheap packet setup

Newsgroup: rec.radio.amateur.equipment
Date: 1998-11-05 00:00:00 UTC
From: Mike Karlesky <karleskm@river.it.gvsu.edu>
Message-ID: <Pine.HPP.3.95.981105224419.18599B-100000@river.it.gvsu.edu>
Source record: 126818

I have a student data application that uses MFJ's TNC packet controllers. I would like to know anyone's thoughts on a cheap radio setup to connect to the controllers. We can't use ham equipment because this is for an extracurricular group whose membership changes (and any ham licenses would be lost). I found out that unfortunatetly the FCC forbids data transfer by way of FRS (which would have been ideal).

So, I'm trying to figure out if there is an inexpensive radio option out there preferably license-free for data applications. I only need 500m range and it's line of sight. I rented Motorola gm300's before, but they are overkill. I would like to avoid renting and actually purchase. Perhaps there is a commercial rig that isn't as powerful as a gm300? Maybe some class of radio equipment that will work for data that is license free? Or, maybe just some relatively inexpensive commercial setup with a license.

I would appreciate any thoughts.

thanks

>apart the battery pack.

You might also check to see if you can find a battery specialty place
that rebuilds complete packs. They open up the pack for you, install
all new cells welded together, and put it back together - generally for
less than it would cost for you to buy just the cells from an electronics
place.

Some of this is probably the cells themselves. Rebuilders use industrial
cells with no fancy labelling, and no solder tabs. They have their own
welding machinery, and weld the cells together in whatever physical
shape and electrical connection required.

Without the welding equipment, you can't do this yourself. You can't
solder to untabbed NiCd cells - the heat damages the seals. So you
have to buy cells with solder tabs already welded to the cells, and
that seems to add significantly to the cost. Then you solder the tabs
together to make your pack.

I have a very nice Drake MN2700 tuner that for those who don't know is one of the finest tuners ever made. I have two of them and one needs to go if I can afford to buy some extra accessories for the shack. The tuner covers 10-160 meters and I even get it to tune my loop on the WARC bands. It is a full legal limit amp. I do not have the balun because I don't use ladder line. This tuner does not use a roller inductor and does not need one so you don't have the extra step of adjusting a roller inductor. It has a 4 position antenna switch so you can easily switch between antennas. I have the original manual that is in like new condition. The tuner is a nine on the scale of 1-10 cosmetically but a 10 internally. I run both of them with an Alpha up to legal limit with no problem. The tuner also has a power meter with 200 watt and 2000 watt settings. It also has a VSWR meter for checking swr. I will ship and insure in the lower 48 states for 265.00. If you ever look at allot of the pictures of contest stations and high power HF stations look and see what they are using for tuners. Guess what you will see, an MN2000 10-80 meter version or a MN2700 10-160 version. That should tell you what a fine tuner this is. Call me at 540-890-1453 or E-mail me at jsjones@roava.net if interested. I can supply references if needed for your peace of mind, 73, Steve DE-KS4HK

Jim !

You can't compare t8 to the w32 and 51r
T8 is ONE BAND AT A TIME
NO X BAND REPEAT

w32 versus ft 51

There is no comparison here too
The receiver in the Icom w32a is a COMPLETE DISASTER !!!!
Completely useless if you live in a city
Truly PATHETIC !! performance
Desense and intermod unacceptable even with ruber duck

Ft 51 althought not perfect is a much superior performer
downsides: no power jack, very small speaker

the choice is Yours

Andy

|It's because of the people who didn't vote that Bill Clinton was elected
|president the first time.

Bill Clinton was elected the first time because of H. Ross Perot! Perot took about 18% mostly Republicans who would have voted for Bush if they didn't have Perot to give their vote to so... nobody got a majority of the vote. And that was the cry of the Republicans for the next year "he doesn't have a mandate!"

The MSR-FM/P (I believe the MSR-2 is the same judging from the service manual) is a dual conversion receiver. Its vintage is between the "4" line and the "7" line. My MSR-FM/P gives acceptable performance. They used excellent filters. My R-7A and 4245 are much superior however due to their better IF shift capabilities and their triple conversion. I have mine plugged into a Sherwood Engineering SE-3 Synchronous Detector which gives great results with it. As Walt said, the tuning is wierd by today's standards (although it was revolutionary back in the mid-70's when it came out). You tune each MHz component of the frequency by turning click type knobs. The display is nixie tubes which really looks cool at night.

The MSR-FM/P that I own was formerly used by the Argentine Navy. It was recently checked out by Drake and is in perfect working order. It isn't for sale.

The MSR series can be seen on the Mr. Cherry's Drake Museum web site:

http://www.dproducts.be/drake_museum/

The HAMManuals people who collected almost all of the manuals for all Drake equipment on CD-ROM include the operator/service manual for the MSR-2 on their CD. They don't have the MSR-FM/P, but the two receivers innards look identical except for an additional FM board in the MSR-FM/P.

Nope. I would guess you have a problem. You might try
doing a reset, but since the unit says it thinks it's xmitting
I think your 6m out is hosed - do you still have 6m receive?

> IRRELEVANT !!!!

The Icom Z1 (predecessor to the W32) in my opinion has a much better
receiver. On the other, because of the RF pandpass filters, it doesn't

have the wide frequency coverage the W32 has.

We have the following Cushcraft base station antennas available:

All are NEW, in their original sealed box.

215 WB, 15 element, 2 meter beam, wide band, can be mounted vertical or horizontal, $ 150

147 VPK, vertical polarization and stacking kit, to stack two 11 element 2 meter beams - includes hardware and coax harness, $ 70

14 VPK, like 147 VPK, but made to stack two 4 element 2 m beams, $ 43

ARX-450 Ringo Ranger for 440 MHz, $ 55

AV-5 vertical antenna for 80 through 10 meters, $ 165

We also have rubber duck antennas available, including some for radios in the 70s and 80s.

Remember, all of the antennas are NEW in their original sealed box.

Prices do not include shipping from Florida.

E-mail to W8EK@fdt.net or W8EK@usa.net

Thanks.

Greetings

Our organization has just acquired a small tract of land on which stands a telephone tower that we do not need. It works fine, but is not currently used for communication. Since we don't need it, we would be willing to sell it for a very reasonable price. If you are interested, please contact me at:

cliffhowell@cookeville.com

512. Re: A tough choice - ts-570sg, ft-920 or the ic-746.

Newsgroup: rec.radio.amateur.equipment
Date: 1998-11-05 00:00:00 UTC
From: gpjorden@my-dejanews.com
Message-ID: <71sssaqn1@nnrp1.dejanews.com>
Source record: 126879

Steve,

I went through a similar situation a few weeks ago. I was torn between the IC-746 and the FT-847. Roughly the same price and performance. But once I dug into the details, the IC-746 stood out as a better value, for me. I liked having IF-DSP, full breakin CW, an easy to use rig, and the antenna tuner. The 847 is definitely a very fine sattelite rig, but I am more interested in HF at this point in time. Not to mention, there have been a lot of problems with the 847.

I've had my 746 for 2 weeks now and am very pleased. Like the people before me, check 'em all out, find out which one you like best.

By chance, did you happen to do the out-of-band mod that gives you 220
Mhz? I have read cases where usage there can cause a PIN diode to give
out and the result is a loss of 6 meter tx. I guess the circuit tuning
is so far out of resonance on 220, that the reflected power is to blame.

515. DRASTIC PRICE REDUCTION (or trade) Tinsley Labs classical cass telescope

Newsgroup: rec.radio.amateur.equipment
Date: 1998-11-05 00:00:00 UTC
From: jpl@hoserve.ho.lucent.com
Message-ID: <71spcn$f0p@nntpa.cb.lucent.com>
Source record: 126882
Cross-posted to: rec.radio.swap,rec.radio.amateur.equipment

I MUST sell this asap -- I've dropped the price to the best
offer over $1200. An EXCELLENT value for someone who wants
a classic, top quality scope.
Contact me at 732-949-0664 or via e-mail.

Original ad follows:

FORSALE -- TINSLEY LABS CLASSICAL CASSEGRAIN TELESCOPE !!!

I have for sale a Tinsley Labs 8-inch Classical Cassegrain
telescope, complete with the original German equitorial
mount and clock drive. Tinsley produced these fine scopes
in the mid 1960s and are known for their fine optical and
mechanical properties. They were (are) research quality
instruments which are quite rare and retain their value.

In mint shape, they go for around $3000. The one that
I have is in very good condition, but needs a few minor
items to bring it to "mint", as follows:

- mirrors are excellent, no scratches or chips, and
bright. Although very good and workable, a
recoating would make them mint.

- clock drive needs an external 12V battery pack and
rheostat to make it operational (this is as it was
intended). A nicad pack or motorcycle battery would
be appropriate.

- A low tripod or pedestal base (about 20" high) and
"rocker box" is needed for the equitorial mount to
sit on.

- the optical tube has some scratches in the paint and
a small dent, which absolutely does NOT interfere with
the optical path. Paint scheme is the original Tinsley
gray.

Thats about it. I just don't have the time to use this
scope and it's too valuable to just let it lay idle.

I'm was asking $2150. for scope and mount (and absolutely will
NOT sell them separately) but am open to offers. Please, I must

find a good home for this; make a bid!

The equipment is located in Monmouth County, NJ. For
further information, please contact me.

Thanks,

Joe Levantino
Lucent Technologies - Bell Laboratories
732-949-0664 (days)
jlevantino@lucent.com

PS -- I will consider a trade for equally valued Amateur
Radio Equipment, in particular a high quality, heavy
duty, HF linear amplifier (Ten-tec, etc).

516. Radio Control Protocol for Kenwood TS-570D

Newsgroup: rec.radio.amateur.equipment
Date: 1998-11-05 00:00:00 UTC
From: jfayre@my-dejanews.com
Message-ID: <71sv7a$4oe$1@nnrp1.dejanews.com>
Source record: 126883

Hello,
I have an interesting problem. I am interested in using the radio
Control Protocol for my Kenwood radio so I can control my radio via my
computer. I am totally blind, and as a result, cannot access the
instruction manual that came with my radio. Nor can I access the
PDF versions of the manuals that kenwood has on their site.
All I need is a the specification for the control protocol.
What commands to send to the radio, what the radio sends back, etc.
I would use the RCP software supplied by kenwood, but it is very
graphical and not very easy to use.
Does anyone have this info, or know where I can get it.
I have an ascii version of the Kenwood manual, but the person who
produced it conveniently omitted the section I need.
Help!!!!!

If your radio makes a hissing noise when you turn it off, then you have the flaw. NOTE: all radios will for a few seconds. Leave it for about an hour and then see. Also, if you crank the volume way up, and press the PTT button, you should get some MAJOR feedback (only if you have the flaw).
If your radio does have the flaw, take it back to your dealer, there is no repair, the problem is internal (CPU)

Thanks for the replies!

I guess it also doesn't matter if I had a "heavy duty" rated lighter plug either then?

I think I'll just stink to your advice on the low power/high gain setup.

i know the MFJ Power supplies are made by someone else since I saw them with another brand name on them. Diawa or Tokyo Hi Power ???Not sure but if MFJ doesn't make it it MUST BE GOOD ! Ha Ha.

I did hear the Fan is loud as it comes on when you transmit but several guys said that they didn't hear any RF hash with the MFJ units.
They are Boxy in shape but lightwight.
I would also consider the ASTRON SS-30
and the other brands of similar units .
Tim

Source record: 126935

I heard the Same thing from reliable sources at Yeasu USA. The ICOM IC-706 MK II is
now selling for $999 includeing DSP unit.
The New IC-706 MK II "G" model will be the
same as the Yeasu Model. Both have DSP
included plus 100 watts from 160 to 6 mtrs
and 50 watts on 2 mtr and 20 on 440 mhz.
Yeasu has a companion antenna that is a SCREDRIVER type that covers 40MTR to
440 MHZ . It is automatic once you tune it up on each band the first time you operate.
Nice feature.
Tim

How do either of these (MSR-2, MSR/FM-P) compare to the R8B? Do they perform better, or, are they just build more ruggedly?

The MSR-2 was built for the marine marketplace. As a general purpose SW radio (like the R8), it would be less than satisfactory due to its very inconvienient 4-knob tuning system. It was really designed for point-to-point and/or fixed-channel use, not bandscanning.

The radio is described more fully in Osterman 3rd Ed. on page 88.

542. Lightning Protection

Newsgroup: rec.radio.amateur.equipment
Date: 1998-11-06 00:00:00 UTC
From: Louis Bybee <louisb@datacomm.com>
Message-ID: <36433F1E.1EB435C4@datacomm.com>
Source record: 126693

There has been some good information on this group in the past on the subject of lightning protection. Some of the suggestions offered had little or no explanation, exactly why the specific procedures were necessary.

Prompted by the information posted, I have been looking for further information on the subject. I stumbled across a tech sheet from Motorola Technical Writing Services titled "Lightning Protection Recommendations". I called 1-800-422-4210, maneuvered through the menus, and asked for Manual-Instruction-Lightning-Protection Item number 6881111E17. They shipped me the one sheet manual via UPS without charge.

The sheet is written so someone with little or no technical knowledge can understand the suggestions. I now have a better understanding of the reasons behind some of the advice posted here on this subject.

Louis

The third party product will yield 1024 channels of memory, costs about $135.00 and is called "The Willco Electronics No-Fail Memory For Icom Radios". You can find more information about these people at: http://www.ameritech.net/users/willco788/my1.htm

The R71A is one great receiver, had mine along time and love it. I'll be buying the memory board soon as I have a feeling that my battery is about to die as its getting to be around 10years old.

[== NEED HELP for HP 8553B RF unit for HP 141 Spectrum Analyzer ==]

I recently bought an HP 141 spectrum analyzer with a 8553B 110 MHz
RF module. I was cleaned the face of the units with rubbing alcohol
(which apparently was a mistake). Then next day I found the left
half of the frequency display window ruined :-(. Apparently the
alcohol caused the ink on the plastic window to run.

I need to know if a new set of the frequency display "windows" can
be obtained. I do not have any manuals for the 8553B, so wouldn't
know where to start trying to talk to HP. If any one can provide
assistance, I would very much appreciate it. I would like to
know what the part numbers are and how to obtain them and if they
are available...

>Should i try to adjust them or not? and which one is for the low power??

The things labelled "Lxx" are probably inductors which are part of the
tuned IF stages in the radio. Do *not* touch these. Resistors will
usually be labelled "Rxx".

I'd buy the service manual for the radio before attempting anything like
this, unless you can positively identify a particular control as the one
you want. If you find three potentiometers labelled something like
"RF OUTPUT HI/MED/LOW", you're probably OK. Something labelled "R123"
could be anything, and your chances of guessing right are poor.

Go for it and drill. I have three NMO's on the roof of my '88 Dakota. You will not be able to place it in the center as there is a reinforcing rib running front to back, I would also recommend not using Diamonds or Comets, as they are stiff and have no provisions for springs. (I had to repair damage from a tree limb catching a diamond SG7500 Ouch!) I now run three Larsons. As far as rigs, what bands are you looking to get on?

A.C. you're on your own in this. Here's something to ponder:

Hams help nab Connecticut jammer

It took a group of ham radio operators to finally track down an alleged jammer that had been plaguing Connecticut police communications for some time. It all took place near the Leagues' home town. Again, Rick Lindquist of the ARRL Audio News:

A Connecticut Amateur Radio tracking team called Capitol Region Malicious Interference Tracking, CRMIT helped lead authorities to a man they believe was interfering with local public safety communications. Wethersfield, Connecticut, police arrested Joel Langdo of Hartford September 29. He's been charged with criminal mischief, interfering with police and breach of peace. Langdo also could face similar charges in other communities as well as federal charges.

Langdo, a security guard who does not hold an amateur license, allegedly used a modified ham radio hand-held to transmit on police and fire frequencies used by as many as three dozen Connecticut public safety agencies. At one point, he is said to have jammed the Manchester, Connecticut, police system for 15 minutes.

Tracking down Langdo took several months of often grueling detective work and careful documentation of offending transmissions, according to CRMIT spokesman Bruce Marcus, WA1NXG, an ARRL Life Member who's in the land-mobile business. Last April, Manchester Police solicited help from CRMIT, which, in turn notified the FCC. CRMIT helped Manchester authorities solve another malicious interference case several years ago.

Marcus said the jammer used a modified Yaesu FT-50R dualband hand-held for all of his escapades, which included playing music, airing sound from TV sitcoms, making moaning sounds, and recording and playing back police transmissions. Because the complaints were widespread, Marcus said it was not clear at first that the jamming incidents were related.

The CRMIT team used sophisticated transmitter fingerprinting equipment, and the offender helped to capture himself, Marcus said. "Its unique signature nailed it."

The offender also had a habit of broadcasting Tchaikovsky's Nutcracker Suite and certain DTMF strings.

The CRMIT team eventually was able to track transmissions to the building where Langdo lived. Marcus said federal authorities are looking into how Langdo got the radio illegally modified to transmit outside the amateur bands.

Langdo was taken into custody on September 29th.

(ARRL)

Hmmmm.
"Federal authorities are looking into how Langdo got the radio illegally modified to transmit outside the amateur bands."
Certainly not from this newsgroup!

A ham fried of mine had a T8A and I had the opportunity to test it out. One of the things that he was interested in was 220 performance, since we use 220 in my area (Nothing like getting a free band by just making one little cut). Unfortunately the 220 performance was nothing short of dismal. The receiver was all but deaf, even with a 220 antenna on it. I measured the sensitivity, and it took over 1 mV to open the squelch. The transmitter seemed a bit better. While it didn't come near the 5 watt rated output on the other bands, it did do about 1 watt, which was enough to bring up the local repeaters. I didn't think to look at the output on the spectrum analyzer. I didn't know it was that bad at the time. That was before I heard about the possible damage that can happen by transmitting on 220. I guess that because the circuit resonance is so far out on 220, and combined with the standard antenna that is not cut for 220, that the reflected power in the transmitter is enough to overload the PIN diode and kill it.

It's still a nice radio, and it's ok to do the out of band mod, but just don't transmit in the bands that are far out of its designed range.

a little off the subject of my query.

my intentions were to use the t8a for qrp 220 since there is an
excellent
220 repeater in my area. i made no claims of mars/cap [to xplain why i
modded]
when asking my question if anyone had info on why it no longer tx'd on
6m.

i pride myself in maintaining good sounding/operating equipment and do
check
for harmonics/over deviation etc. i own/maintain a multi-cast repeater
system
so i wouldn't like anyone jamming/messing with my bandwith either.
442.45 and 53.45
[thought about adding 220 but probably not now that i've killed the t8]

i just wanted to see if i could gain 220 operation without buying
another rig.
it blew the pin diode obviously to find out. that's life in ham radio
;-)

i've got this giant sized blood bag sealing machine that uses a
itt/triton 6366
tube that i'm going to build into an hf amp. i'm no genius at
hombrewing but
i do take care to make sure my neighbors don't get interfered with my rf
output
on the bands i frequent whether it's with an untouched or modified
radio.

thanks for all the replies from this group.
problem with t8a located and resolved.

Thor,
Sorry about your dial. I doubt very much if hp will still supply these parts, but they do have this neat computerized service that will tell you that they are not available, if you call 1 800 227 8164. If they are available, be prepared for serious amounts of money. I priced a knob once for a laugh, it was $14.....

They have a parts ID service at 916 783 0804

As far as I can tell the fixed window is 08553-40105, the sliding window is 08553-40103.

Ed Matsuda (619 479 0225), does very good legible copies of the manuals for this stuff.

Good luck, and take it easy with the cleaning fluids :-)

Dan AC6AO

Actually I'd almost bet they do. Before I sold my 141T outfit earlier
this year, I ordered a couple of replacement parts for an 8554B from HP,
including the precision potentiometer that controls the tuning section.
They will charge an arm and a leg, but they seem to be much better than,
say, Tektronix, when it comes to stocking replacement parts for the
older products.

I do remember cleaning my 855x modules with stuff a heck of a lot
stronger than iso alcohol, and never saw any sign of trouble.

Nice topic, I hope I am not to late.

1. FT 902 DM. If you can find one. Neat features FM, AM, Single channel
VFO Memory.
Rugged Construction, built in electronic keyer,
audio peak filtering for CW,
Passband tuning, WARC bands, Digital and analog
readout.
Drawback, 20 years old. The manuals are not
accurate when it comes to
alignment.

2. TS520S. Previously covered.

3. TS830S Excellent rig. WARC bands, single channel VFO memory, no
AM or FM.

4. FT101E Excellent rig only 160 to 10 meter operation. Don't care
for the finals.

5. TS940S Excellent rig hot receiver. Don't care for the four
separate banks for memory storage.
10 channels in each bank. Love the rig.

Those are my choices. Icoms have always been known for having a low phase
noise. The IC751 and 761 are pretty decent rigs. If memory serves me
correctly, the IC 751 was the last to have passband tuning.

For the frequencies above 6 meters, don't wory about the groundig for RF. The wir you will try to run will radiate more than it might try to ground. It will be too long in wavelengths to act as a RF ground. Unless people will be closer than 10 feet from the antenna, don't worry about that either. If a ground plane type antenna is used and it as above the people, they will be out of the radiation patern.

A ground wire might be a good idea for lightning protection. Otherwise, disconnect the radio when not using it or a thunderstorm might come up. I have had one to 10 transmitters and scanners from 80 meters to 440 mhz hooked up for around 20 years here and never unhooked them and never did anything special to ground them for lightning and never had a problem, but there could be a 'first time' !!!

The key is to understand "common point grounding". All protection devices
for power, phone, or antenna share a common ground point before the
equipment.
This avoids providing a path for lightning that will pass through the
equipment....

Pete

I need several WJ 8617B receivers for a project. Paying up to $2000 for right models/options/condition.

Please e-mail with your info to: spencer12345@msn.com

Thanks!

576. Icom wont respond?

Newsgroup: rec.radio.amateur.equipment
Date: 1998-11-06 00:00:00 UTC
From: Louis Bybee <louisb@datacomm.com>
Message-ID: <3643EFC4.C4263568@datacomm.com>
Source record: 126727

I purchased an IC-2000H from Icom America at the SeaPac Ham Fest last June. The factory rep that I bought the radio from assured me that the radio would fit my needs (entering frequencies from the mike, and DTMF auto patch tones) pointing to the DTMF mike saying "see, it will work fine for you". The radio works fine otherwise, but after a few months of struggling with a "manual from hell", trying to get those two functions to work, I took the radio to my local HRO who took the cover off the radio, and informed me that there were two tone modules that had to be installed before I would be able to use the radio as I was trying to.

After numerous unanswered EMAIL's and phone calls, I beginning to formulate the opinion that short of driving to their location and making a fuss, I wont hear from them.

Is my experience unique, or do others find Icom America unresponsive if it's clear you have a problem, and are not seeking to buy something? It seems such a shame, as this is the first Icom product I have owned, and it works great, and signal reports are great, but the after sale service seems bad enough that I wouldn't be inclined to purchase another Icom product.

I like to try different radios. I figured I could try it and get my money back as soon as my curiosity was satisfied. It's a very nice radio. I listen mainly to ham SSB and MW. I really don't need such a sophisticated radio. I was happy as a lark with an R8. I'm trying to figure out now what radios are left to try. This is fun as long as I don't get burned. I will continue to enjoy the radio until its new owner comes along. I bought it from an estate. I don't think the guy ever used it. It had the 20 original memories used that comes with a new R8B and no others. Is it possible to use 1000 mems? The guy had about 70 other radios, believe it or not. Bill K9KZ

That is what caused the trouble. The T8A is not made to operate on
220 Mhz. The Pin diode is out.

. Look at www.icomamerica.com under " Getting in touch with Icom "
for service instructions.

Bob,

Perhaps there are a few folks left out there in the world
who were educated at private schools or at home and who have
somehow obtained the ability to genuinely think rather than
buy the pure insanity, babble, and B.S. that is spread upon
us by the media. Perhaps they have studied history and have
listened to short wave versions of the (real) news. Perhaps
from BBC, DuetchWelle, Christian Science Monitor (SW), and
etc. and pondered why this news sounded like it was being
broadcast about another planet. News that seemed to report
about the same events but "spun" an entirely different tale
than the BC band and TV news. A tale that seemed somehow to
be more real and true than the media porridge being poured on
them. Perhaps they spoke a foreign languange and had somehow
listened to the NATO Military frequencies and found that the
signals were very strong and were coming from all around them,
and were talking about the plans to "Police" the poor dumb
Norte Americanos and to remove their privacy and freedom.
Then, having gained the ability to add 1 and 1 and get 2 at

least 5 times out of 6, they found the handwriting on the wall and realized that it would be good to be able to listen to and talk (clandestinely) to their potential captors. Maybe they lived in L.A. and listened to these frequencies and heard the massive military type info being spoken night and day by members of LaRaza, (Which consists of 85% of all the 36% of hispanics in California.) who each have purchased an average of 6 firearms and 10,000 rounds of ammunition over the last 4 years. Maybe the same type of speech by the 'Raza members in each of the major and minor cities in TX, NM, & AZ as well. Perhaps they found out that the goal of La Raza is to take back the land that the good ole U.S.of A. took from "Mehiko", such as TX, NM, AZ, and Calif..
Maybe they heard the same coming from the armies of Nuyen Kao Ky, which numbers over 400,000 in LA and Orange Counties and who have more arms than LaRaza. Perhaps they thought that it might be wise to have their radios cover the same frequencies being used by all of these folks, "just in case", so's to speak.

Listen in and you will no longer be "CLUELESS"!!!

From: Lee Bahr <bahr521@earthlink.com>
Message-ID: <3642A25F.46443205@earthlink.com>
Source record: 126761

I would like to purchase a Drake T4XB, AC-4, and a MS-4 speaker. I would consider a T4XB w/o the speaker or power supply. I am looking for a VERY nice clean looking transmitter. It should have a near scratchless front panel, a near scratchless cabinet, no extra holes, original knobs, a tuning knob spinner disc in nice shape, very little chassis rust, etc. I can fix a broken radio, maybe, so I am more interested in its looks than its working condition. Do you have an original manual? Would maybe consider an R4B too. If you have such an animal please contact me. Lee Bahr w0vt

599. Re: RF Grounding of equipment

Newsgroup: rec.radio.amateur.equipment

Source record: 126762

Ground your rig to AC outlet, if it is in fact grounded, which it should be if the wiring is 10 yrs old or so. Neither that or the cold water pipe will be an effective RF ground, but at 2m/440 it won't make much difference anyway, since you're using a ground plane antenna. And don't worry about the power level, at 2m/440 I doubt if you'll cause any type of RFI with your neighbors, or very minor. You might consider using a J-pole in front of a window (behind the curtains) also. And HAVE FUN!

600. WTB LOOKING FOR USED CLEAN KENWOOD 950SDX..

Newsgroup: rec.radio.amateur.equipment
Date: 1998-11-06 00:00:00 UTC

Dear Sir

I am looking to purchase a used CLEAN kenwood 950SDX
preferable in the tristate area NY NJ CT (east coast)
since I will be coming for Christmas to visit my daughter
who lives in Long Island NY, so it will be easier for
me to get in eye-contact with you and the "goodies".

Please let me know of the
1.date of purchase
2.serial number
3.and of any accesories (service manual,desk top mic-speaker,etc)
that might come with it.

Any suggestions wellcome.....

Please respond preferable direct
email sv1cvy@tee.gr or mdim@intranet.gr

THANK YOU IN ADVANCE

Try the Radio Shack (Realistic)radios that operate around 49 Mhz. They are about $30 each, have a fairly good range and I don't think there are any restrictions on them. This is the same frequency as toy radios and baby monitors and some cheap cordless phones so you may get some interference. I have used them for lots of projects and they work great. You will, however need to open them up and make some slight modifications to connect it to your TNC. There are some other "toy" radios out there that are good for these kinds of projects too.

Scott

The transceiver has 3 power levels

LOW = 5 Watts
LOW* =10 Watts
HIGH = 50 Watts

Can i reduce the lowest power lever to less than 5 watts???

I opened it , and i found inside four trimmers, named as L16 , L26 ...

Should i try to adjust them or not? and which one is for the low power??

Thanks in advance

Gee Whiz I sure haven't experienced the same problems that User 66 has with the Icom W 32A. And I live in a city of about 400,000! Either I am the lucky one, or he was the unlucky one, but I am happy with the radio....no regrets whatsoever. I didn't select the FT 51 because I thought the audio was superior in the Icom. To me, some of these small speakers make audio hard to understand, particularly if there is other ambient noise, as there typically is either outdoors or in a vehicle.

I am sure there will be more posts on this subject, or maybe you can ask someone in a local ham club where you live and see if any members own the radios in question.

Go ahead and drill the hole. I finally got up the nerve some years
ago to do it to my S-10 and used a Larson with MNO mount. I liked it
so much that I did the same with my new Suburban. When you get ready
to sell or trade, just pop in a little rubber plug and let it go.

As to rigs, I've always been a Yaesu guy but thru a trade ended up
with an Alinco DR-600. It is a good rig but scans way too slow.

I would hope no-one is trying to use the rig for 220. If you've ever
looked at the spectral purity of the output on 220 it looks like
an EKG display. Sure you can hit your local 220 repeater - all
of them at the same time.

Bill,

The IC-R71A is not new. In fact, it is pretty old (over 12 years since I first had it). There are a few variation to the model. The one I used to have had 32 memory channels, a PBT (Pass Band Tune), and the IF shift. My experience with the receiver was pretty good. AM sounded quite "boomy". It's hard to receive RTTY and CW if you don't have a filter. Mine had a 250Hz filter and it did a very good job.

I couldn't use a full size antenna for the reciever but had a 50 ft wire laid around the house and it seemed to work pretty good. So I cannot give you a whole lot on what stands out on the receiver side. I think it is a quad conversion, but I am not quit sure. I used it mainly on strong BC stations so the sensitivity was basically good at all time.

If you are buying a used R-71A today, make sure that the internal battery has been replaced, or you know how to replace it. Since it is a "yesteryears" product, the microprocessor runs on codes that are stored in RAM, which is backed by the internal battery. Before I traded it in, ICOM would charge me $75 plus shipping to replace the battery and reprogram it. I did it myself with a parallel DC source and it worked just fine. The process is simple. Just keep in mind to have a constant DC source (3 or 6V?) parallel to the internal battery before you take the battery out.

There is a third party product out there that will convert the battery problem and to yield 100 (or 99?) memory channels. Unfortunately, I don't know the vendor's name.

It was a reliable companion during the 12 years I was unable to get on air. I liked it a lot because it was with me the whole time when I moved from dorm rooms to dorm rooms, then to different apartments. It meant an end to an era when I gave it up. Hi hi...

I've never used Drakes so I cannot comment on it.

Good luck.

Best 73!

I forget if I saw this here, or perhaps in rec.crafts.metalworking, but I saw somebody somewhere suggesting spot welding the tabs on by charging up a capacitor then discharging it through the tab and nicad body. Your mileage may vary, don't try this at home, kids asks your parents first.

HeathKit 301 401
Also have the Scope and one more Heath
which I'm not sure what it is has alot of connections in
the back of it,even vhf and 6MTR connector.
Don't know enough about this type of gear.

Source record: 126829

I had the same decision and opted for the TH-G71A - You can scan VHF/UHF simultaneously in MEMORY - of which there are 200 channels. In addition, I purchased the Computer programming cable - to allow programming (read from / write to) memory. I don't think you can do this with the Th79.
All in all, the TH-G71 is hard to beat for the price - and for a short time, there is a FREE battery that Kenwood will send you. The only disadvantage I found is not being able having dual band RX - but I knew this going in. The G71 is a very impressive and user friendly radio!

There is a new shareware program on the net, that works great with the IC-Q7A.
It has a feature that even allows programming below 30 mhz.
The address is:http://home.t-online.de/home/Ingra-Beton
A computer interface is required. I am using the interface that came with the
cloning software from RT Systems. A schematic for a simple interface is
available at http://www.hamradio.cz
Reply with your comments.

>mounted on top?

Plastic won't work any better than the metal hat, nor will it reduce exposure. Using a larger antenna with the groundplane extended out to 1/4-wave will work better as an antenna, however. It will look darn strange, of course, and there may be some hazard to others from the points of the groundplane. As your momma said, "you could put someone's eye out with that."

The practical way to extend a portable's range while keeping your RF exposure to a minimum is to put a 1/4-wave whip on the radio and use a "tiger tail" sort of counterpoise (a 1/4-wave wire dangling from the shell of the BNC). Use this via a spkr/mic with the radio held at arm's length to minimize exposure to the head/eyes.

I'd normally recomend an externally mounted antenna, but I realize you need to move around while using the radio. So go ahead and use the metal hat if you wish. Put a better antenna than a rubber ducky on it, a 1/4-wave whip is easy to build, and keep transmissions short. Since the FCC exposure limit is time average based, short transmissions should keep you inside the limits.

If you can possibly carry a walking staff, however, this would give you the option of mounting an antenna on the staff. You can hold that over your head to gain a height advantage in difficult situations. This also looks odd, of course, but not as odd as an antenna on your hat. A halfwave sleeve dipole would be a good antenna to mount on the staff.

Staffs can be handy things to have around anyway. They help you walk over bad ground, and can be used as a weapon if necessary. A hickory shovel handle can make a dandy staff. Shrink a metal cap on one end to keep it from getting chewed up coming in contact with the ground (or use a rubber crutch tip). Clamp the sleeve dipole over the other end. Use a strip of velcro to control the excess coax while you're walking along.

If you put a little pennant on the whip at the end of the staff, you won't look quite as much like a dork, and the pennant can help you to avoid poking people with the antenna. It also makes you easy to find in a

crowd, which may be an advantage at a public service event.

That's kind of like asking how long is a piece of string, Dave.
Power is the product of voltage and current. You've given us
a voltage, but no current value. The voltage of an alkaline cell
sags as current draw is increased, and the voltage declines
as the battery chemicals are expended, so there is no simple
answer.

The amount of current your radio draws at a given RF output
level should be in your manual. With that info, you should be
able to make a rough guess as to the power the pack will be
asked to provide. Then you can consult a battery manual to
see if AA cells can supply that much current. Then power is
simply P = I * E.

It is intended to convert the aircraft band down to SW. The RF amp
stage makes it unidirectional. If that weren't there, it would work
in either direction.

>disassembling these battery packs?

These packs are glued together. Put the pack in the freezer for a while,
then rap it against a table edge. The cold makes the glue brittle, and it
will pop loose with a moderately strong tap when frozen. There's a plastic
tab at the top you need to pry up to get the pack all the way apart (be gentle
with this, you can break it). A bit of glue will put the pack back together
after you replace the old cells.

Check the ads in the back of Embedded Systems magazine, or
in Circuit Cellar Ink (or NASA Tech Notes if you get that). There
are a number of A/D data acquisition boards for the PC, 8 or 16
channel. Most are rather expensive, but if your data acquisition
needs don't require much speed, there are also some bargains.

If the signals being sampled are TTL, you can also just use a
parallel printer port to input the data. Cheap, and you probably
already have it.

i have CSI private patch V forsale.

it works in several modes to fit a variety of needs.

i've used it mostly in simplex mode with 1 radio [dr-119]
with connections made through the mic jack.

complete repeater controller if you want to use 2 radios or
seperate tx and rx units.

speed dials, fully programmable over air or on built in keyboard
or with the telephone.

remote base operation in any mode.

$200.00 u.s. dollars includes shipping via postal priority.

thanks for your time.

654. FS: New Mot. Micor/Syntor parts/access

Newsgroup: rec.radio.amateur.equipment
Date: 1998-11-07 00:00:00 UTC
From: Doran Platt <jeepp@erols.com>
Message-ID: <3644D250.175E712B@erols.com>
Source record: 126605

I'm just getting started listing a large consignment (about 1200 lbs.)
of new Mot. parts and accessories. Virtually everything listed is new
in the Mot. box. For now:
6 ea. HMN1015A mobile mics
5 ea same as above but used/OK
10 ea TMN1004B desk mics
28 ea TCN1112A control heads
11 ea HKN4084A control cable set
4 ea HKN4033 cable set
10 ea Siren control boxes (may be a bunch more!)
2 ea HKN4083 cable set
8 ea Handset, ptt (some with RJ connectors, some with a multi-pin 90
deg plug)
10 ea Above, new, but a bit shopworn
As soon as I get things sorted, I have a complete line of RF power
transistors, modules, PC boards, etc etc. I open to reasonable
offers/trades for all/some/few of the above. I do Collins and Viking...
not Motorola! (hi)

I had the idea that a headset might be a good idea for use with my ICOM 2000H mobiles. My friendly HRO person, whom I do think is competent, tells me no one makes them, including ICOM. He recommends making my own.

Question for the group - has anyone done this that can offer some tips?

For instance, what are the pin outs for the wires on the connector?

Thanks in advance for your ideas.

This is the first complaint I have received regarding bounced messages.
Please forward a bounced message, complete with all headers to
louisb@datacomm.com or louisbee@netscape.net and I will address the
problem with my ISP. While Icom America's web site does list toll
numbers for support, it would be a nice touch to list EMAIL support
addresses for those who prefer to avoid the cost of toll calls. It was
not easy to come up with any EMAIL addresses from the web site.

I did call. After two calls to a toll number, with long waits and no
direct attention to my problem, I resolved to address the issue with
EMAIL to save money.

>

> mic in DTMF remote mode..

When I was considering which radio to purchase at the ham fest, I
specifically pointed out the features which I needed the radio to have.
Among them were the ability to enter frequencies from the mic, and DTMF
tones for use with auto patch repeaters. The woman who waited on me
assured me the radio would perform these and many others, as it came in
the box. I asked her to open the box to see if all the parts were there.
They appeared to be. She pointed out the DTMF mic to assure me the radio
would fulfill my expectations.

>
> The IC-2000H never did direct keypad entry out of the box, That is

> are about $100.00 extra.

I am aware of that fact now. If the radio would have been correctly
represented to me at the time, I wouldn't have completed the purchase
due to the added cost of the option modules. Other radios would have
been more attractive.

There isn't anything "clearly described" in this manual. It is a perfect
example of what can happen when someone with English as a second
language translates a manual from another language. A suggestion, send a
draft of future manuals to a few indigenous hams from the intended
country for evaluation. In Icom's defense, I understand not all Icom
manuals are as much fun as the IC-2000H.

As I stated before, the radio performs well except for the functions I
was told were included with the radio, and as you correctly point out
aren't, and I feel the only acceptable solutions to my dilemma are to
refund the purchase price of the radio ($180), or provide the parts
necessary to enable the radio to perform as represented by the
salesperson of Icom America.

Thank you.

Louis

PS: You don't mention what, if any, position you hold with Icom?

I sold the cute little Mizuho 6M handheld, but I still have the 15W linear amp
made for it. If you're interested in that let me know. I do have 2 of the
Mizhuo 15M CW/SSB handhelds. Both have the extra XCO, the 15W linear, and all
of this in the mobile mount. This makes the setl look like a tiny tiny mobile
unit. I used these to talk from Utah to Calif. and to Texas (using Bilal Iso-
tron antennas) and it was just like being on the telephone. Great little sets,
but I'm into refurbing strange military sets and these are excess, could you
use 15M sets???

672. Re: Cigarette lighter socket for power connection for mobile radio?

My '98 Pontiac Trans Sport van, in addition to the cigarette lighter, has two power outlets that are rated at 20A (one on dash, one in rear). GM recommends them for powering radios, computers and the like, specifically recommending against connecting directly to the battery. In fact they seem to have gone to great lengths to make the battery inaccessible, to the point of remoting the + terminal to the fuse box and recommending that point for jump starting if necessary. I run an Icom 2710, usually at medium power, but have run high power with no problems plugged into the dashboard power outlet.

FOR SALE

MFJ 1278B, Multi-Mode Data Controller with MFJ 1289 Multicomm supporting software.

View at:
http://www.geocities.com/Heartland/Ridge/7463/mfj/mfj.jpg

Software switchable between two different rigs. With all manuals, two cables, and the software as above.

This version of Multicom is DOS based and non-copy protected with my call embedded in it. I will provide a letter transferring all my rights to the buyer to be used to upgrade to their call and newer software if you wishes. (Check with MFJ for their policy.) The software supports Full Color SSTV, 16 Level WEFAX, VGA pictures, etc.

In very good condition but has small scratched area on front panel above the tuning bar graph. I guess a loose cable end rubbed against it at one time.

$200 or possible trade for interesting gear.

Ian, K6SDE

>power output?

It'll deliver 10 db less signal to the same point as a 5 watt HT.
So the question becomes, how far is it to the point where the
SNR degrades to unintelligibility. To answer that question,
you need to know the 12 db quieting threshold of the target
receiver, the antenna gain of the target, and the path loss
between you. The latter is obviously terrain dependent.

Under line of sight conditions, to an identical radio, with the
stock antennas, the range is at least 30 miles. Over an obstructed
path, it will be far less. Somewhere between half a mile and
a couple of miles is realistic in suburban terrain. A friend of
mine and I talk back and forth between our houses at a distance
of about 2 miles. I have the VX-1R and he has a FT51. The
path is somewhat obstructed, but there are no high ridges
between us. That'll put you dead in the water.

OTOH, using a good external mobile antenna on the radio, and
operating to a well situated high site repeater with a good gain
antenna, I get a range of about 15 miles. With a 35 watt mobile
connected to the same antenna, I get solid coverage out another
10 miles. This is all very terrain dependent, however, your mileage
will definitely vary. I've achieved hilltopping coverage out to about
70 miles to the same repeater, but that's very spotty.

More power often helps, but there are places where no reasonable
amount of power will help. With a good external antenna, it is often
surprising just how little power you do need. What is often annoying
using low power in a car, however, is the amount of picket fencing
and fades you suffer. That can be very distressing to everyone
else on the repeater. More power in this case definitely fills in
and makes listening to you much more pleasant. You generally
need to jump to more than 5 watts, however, since the fades are
generally deeper than 10 db. Going to 35-50 watts makes all the
difference in these cases.

In my opinion, there isn't a whole lot of difference between 0.5 watt
and 5 watts in most cases. If one works, the other does too. And
when one doesn't work, the other generally doesn't either. To get
a worthwhile improvement, you need to jump all the way to the
50 watt level. Then you start to see some serious null fill capability.

Source record: 126646

Hi,
Let's see it this way. If the angle were 180 degrees, it'd be like
vertical dipole, so Z would be colse to 70 Ohm or so. When the angle
is changed to less than 180, say 45, Z will be lower closer to 50 Ohm
coax spec. Not an exact match but close enough for pratical use.
I'd do with 3 radials. Another trick is put a little resistor(say 1W,
about 1 Meg Ohm one) across, between radials and radiator(in another
word, short the coax with resistor at feed point). This becomes handy
when you wanted to check the integrity of coax. If you measure ~1Meg Ohm
from shack end, the feedline is in good shape(not open or broken).
Becuase it is such a high value it won't do any harm to your radio or Z
matching. It may also help with static noise.
73,
Tony, VE6CGX
P.S. Radials should be little shorter(~5%) than radiator element.
(ground effect)

Thanks for the response, Ralph. :) That makes some sense about the frequency;
hadn't thought about that aspect of it.
Lightning protection...yep, definitely taking precautions there; we get a lot of
thunderboomers through KC in a year. I've had friends and relatives lose computers and
other electronics because they weren't careful...even when the lightning didn't hit
their residence directly.

My upstairs neighbors could very easily get within 10 feet of the antenna, though
of course the ceiling's between us for whatever difference that may make. If I keep
the power down, they'll still be outside the safe radius for uncontrolled. If I have
to run lower power for a little while, so be it; I don't plan on living here more than
a few months more, and I don't want to take any more chances with their health than I'd
want them to take with mine. And it shouldn't take more than 10 watts (if that) to hit
repeaters in a metro area, even the ones on the far side, should it?
I'm currently studying General/Advanced theory, so I'm getting exposure to the
radiation patterns of different antennas. Interesting stuff...looking forward to
upgrading as soon as the FCC gives me something to upgrade from. <g>

You can enable the reception of SSB , CW and RTTY-signals by using the
following procedure found in the NRD-545 handbook on page 17 :

"Normally, the USB/LSB and CW/RTTY modes cannot be selected when you receive
freqeuncies 30 MHZ or higher with the wideband converter unit CHE-199
mounted. You can select the USB/LSB and CW/RTTY modes by turning the power
ON with the USB/LSB and CW/RTTY buttons held down. Though these modes can
be selected, but reception functions are not assured. To reset the NRD-545,
repeat the above operation."

I have for sale in Portland, Oregon:

Vertical, Cushcraft R-7......like new......Was up only 8 months before I had to move to a apartment and put it in storage. Still mostly assembled with the instructions. It would only take maybe 15 min. to toss it back together. Paid $379.00 new....I would like to get $225.00 or best offer. This is pick up or I could deliver it in the Portland Or. area if the price is right.

Beam, Telrex TB6EM.....6 element tri bander 10, 15, 20 meters. This was new in 1984. In ok shape with the instructions and blue print. It has one solid patch on one element and could use some hardware (a few nuts and bolts). again mostly assembled and marked when it came apart. This is pick up only. Make offer. cash or trade? I need to get it out of my storage unit. Would make a good first beam.

Your email address bounced back many times from work.
I've often wondered why you did not call. www.icomamerica.com lists
technical support telephone numbers to call with questions.

The items you seek for your IC-2000H, UT-101 DTMF decoder and UT-85
CTCSS decoder are now and always have been an option as listed in the
back of your owners manual.

These two devices were NEVER included with the radio out of the box
during it's production life.

You will need to purchase them. Once installed they radio will act as
your were told at the hamfest. Read about the external DTMF remote in
your instruction manual for how many operations you can do with the
mic in DTMF remote mode..

The IC-2000H never did direct keypad entry out of the box, That is
clearly described in the owners manual, sorry do not have the page
handy though. The UT-85 CTCSS decoder and UT-101 were an option.
Neither the UT101 or the UT-85 CTCSS Decoder were standard equipment
in the IC-2000H no matter what your were told. I think these items

are about $100.00 extra.

From the catalog:
TH-D7A; with APRS Operation

Kenwood's deluxe dual band handheld features automatic Packet Reporting System APRS allows you to track mobile stations on a map on a computer screen. The TH-D7A includes a 1200/9600 built-in TNC and a program for dealing with date formats supported by APRS. Its display shows information each time correct APRS data is received; you do not need a computer. If you do not have a GPS receiver, you can manually enter your position. TH TH-D7A has jacks to connect to your computer and to a GPS receiver.

2m/440 dual band
aircraft rcv and dual rcv on same vhf band for voice and data
call channel and ctcss
3 scan modes and 200 memory channels
dx packet cluster monitor
wireless remote control
sky command operations
10 dtmf AutoDial memories
vc-h1 messaging control

*not approved by the FCC, no price given

709. Light noise question

Newsgroup: rec.radio.amateur.equipment
Date: 1998-11-07 00:00:00 UTC
From: Gareth Crispell <gareth@capecod.net>
Message-ID: <36448C22.F872CBCE@capecod.net>
Source record: 126674
Cross-posted to: rec.radio.amateur.equipment,rec.radio.amateur.misc,rec.radio.amateur.antenna

My rig is the IC-756. The street lights in the neighbor are those yellowish (sodium vapor?) lights. When the lights fire up at sundown there is a very slow ignition sequence that seems to take several minutes (as many as 10} to bring the lights to full illumination. During this time the noise on the radio is really horrific totally disrupting any qso in progress. The racket settles down after the lights come up to full illumination. Is this just my rig? Is there anything - mod that will help this? Should I leave well enough alone and bite the bullet during the firing cycle?

thank you gentlemen de ... N1MSV gary

Gareth http://www.capecod.net/~gareth/n1msv.htm

> power output?

Although I am having a great time with my VX-1R, I would NOT recommend it as a "first HT" to many!

For less than an extra hundred bucks, you can get yourself a Yaesu FT-50RD...which will give you a full 5 watts output using 12VDC. And, if you ever desire to program via computer, the ADMS software will also work on your future acquisition of a VX-1R...and so will your FT-50RD speaker-mikes work on the VX-1R.

I can hit plenty of repeaters with the VX-1R...but I live in probably the most repeater-rich area of the nation - in Southern California. But if you desire more reliability and more reliability, please consider a more robust unit as your first HT.

Where do you live? Have you already joined your local Amateur Radio Club???

I do not represent Icom...but I do not know from your message exactly what you want. Do you want to scream at a factory rep, claiming misrepresentation? It took you "months" to figure out you didn't know what you were doing? You want to blame Icom for not throwing in two additional cost items for free?

It sounds like you didn't perform a lot of homework before you shelled out several hundred dollars for the unit. Yes, you were talking to a factory rep, but at a show? Did you really expect to get 100 per cent total, undivided attention at a trade show?

I don't know. I just know how -I- spend MY money. If I do not know a lot about a product or line of products, I will "hit" my local Ham Radio Outlet with a weekday morning visit. Never on Saturday. I wouldn't expect devoted, uninterrupted time from a salesperson on a Saturday. And NEVER at a show would I expect anything other than "quick sales." But that's just me. I am sure there are folks here who will scream that "It's MY money - I demand courteous, undivided attention ANY time I walk into ANY store."

With Icom, I have had nothing but positive experiences with their sales and their service departments. I have had to send in a few commercial HTs to them for tweaking and repair - no problems. Honest repais pricing, and accurate delivery/turnaround times.

Good luck.

Excellent, technical reply, Gary.

But wouldn't you think he'd be happier with, say, a Yaesu FT-50RD as his first
HT, rather than a VX-1R?

I recently purchased a used Icom IC737 which appears to have a fault on the tuner board. I have replaced the diodes and chip as recommended by Icom but to no avail.

Does anyone have a copy of the service manual for the 737 and if so could they please fax me a copy of any pages relating to the tuner section. I would be particularly interested in any test points, voltages etc.

My fax number is 519-839-5360.

Many thanks,

Larry VE3YET.

>
> 1. Is the Y2K bug overly hyped by the survivalists?

If it's by the survivalists, I'm almost sure it is (although they may have valid points.) However, while the world will not stop, it will cause some considerable pain. The problem is basically the extent that microprocessors have proliferated society and the interaction between different computer networks. You can fix the hardware, but that might not automatically fix the software (so now you have 4 bytes for the year field, but the programmer only used 2 bytes.) Or, you've fixed your hardware/software to be Y2K compliant, but what about the other guy's (i.e. business, etc.) computer that sends data to your computer?

> 2. Is there a standard digital mode that is in use at this time?

While the protocols shouldn't be dependent on date fields, they should have a time-to-live field, which would make them immune to Y2K problems, it would be the software that is written that rides on top of the protocol that I'd worry about. Supposedly older GPS receivers will experience a Y2K bug...

Can anyone tell me if the FT-ONE would be a good radio for a beginner, and if so, the approximate value for one in good shape? I am currently studying for the Novice test and came across an FT-ONE for sale. Thanks for your help.

737. FS: ICOM IC-737 & IC-PS15

Newsgroup: rec.radio.amateur.equipment
Date: 1998-11-07 00:00:00 UTC

Message-ID: <720fq2$b3f$1@nnrp1.dejanews.com>
Source record: 126740

ICOM IC-737 HF Transceiver.
This unit is NEW. I bought it in December 1994 to listen to news from overseas but have not used it other than trying out that it worked fine (less than 5 hours - I guarantee that!). Since I have no ham license it has never been used to transmit. The unit is in absolute new condition. I have all extras, manual, microphone, fuses, box, cables, schematic.

ICOM PS-15 Power supply (100W). This is the unit that goes with the IC-737 and I bought it new with the transceiver, (again have everything).

I am only interested in selling both units together.

If you need to see the specifications, I can fax you the sheet or scan it in from the manual.

Asking $900 for both (paid $1669.44). This is as new of an IC-737 & IC-PS15 as you will get.

Call Axel @ 208-883-3012 (home) or 208-885-4078 (office), email krings@cs.uidaho.edu

I do not think so.
I had used the FT-100 in Japan HAM fair on Aug/98,
also 706MKII-G.
The model number-FT-100 veriy confuse me, I know FT-DX100,
yes it is tube RIG.

Source record: 126495

Hi,

I own a Tokyo HyPower HX-240 2 meter to HF transverter, and don't have a manual. I'd love to buy one. Failing that, before I write to Japan, let's see if anyone here knows the answers to my questions:

Is it SSB/CW only, or can I use it on 10 meter FM?

I can receive on the 30 meter band by tuning up in the 147-148mhz range on my FT-290R in the 7 mhz position and the 12 meter band in the 21 mhz position. What is the acceptable limit to the input frequency? Can I hurt the unit by trying to transmit
on the WARC bands?

That's it for now :)

Thanks and 73,
Caity
KU4QD

You are correct. A gentleman who works for Icom contacted me indicating
that they tried EMAIL support some time ago, and it didn't work out to
their satisfaction. It's a shame as I enjoy using EMAIL for support with
other Ham vendors.

>
> > I did call. After two calls to a toll number, with long waits and no

Actually I've become so dependent upon EMAIL, and usually pleased with
the response, that I didn't rely on it. You are probably correct, Snail
Mail might have been a better choice in this case.

>
> > When I purchased the radio I was unfamiliar with the radio and the

>
> Doesn't that say it all?

Only when taken out of context. I relied upon the sales staff to be
knowledgeable and accurate in their representation of their products.
Silly me.

>
> > ...I feel the only acceptable solutions to my dilemma are to

It is finally clear to me why my shoes have been wearing out
prematurely. You have taken the opportunity to "walk miles in my shoes"
so you could, with uncanny accuracy, and unusual perceptiveness, surmise
my situation, and make an unique and intelligent summation of my
dealings with another party. Oh what I would give to possess skills such
as you exhibit.

>
> I still, personally, see absolutely NOTHING wrong with Icom in this scenario.

I could be wrong, but I don't recall asking for you, or anyone else to
pass judgment, right or wrong, on my situation, just if others have had
experiences with Icom that they were unhappy with. It might interest you
that you are the only one to contact me pointing out the many errors of
my shopping procedures. You might also find significant, that the
EMAIL's I have been receiving, are about two to one with positive
experiences in regards to dealings with Icom. It has not escaped me that
my unpleasant experience with Icom could be an isolated incident, with
my needing to share a portion of the blame.

This is the last post I will answer, as I believe this has degenerated
from useful and informative to something that would be best pursued in
EMAIL. If you feel there are areas in which I need further improvement,
or correction in, feel free to contact me by EMAIL.

> >
> > Bob
> > KE6WYG
>
> Code Quick

Bob,

I'll second that. The Code Quick cassettes are good, and I used them in conjunction with the CD. The only caveat I'd make is that while driving you'll be unable to take advantage of all their ways of learning things...the tapes want you to do more than just sit and listen to dits and dahs. However, if you take the time at home to go over a given lesson the first time, then the tapes would make a good daily refresher. It just depends on how much time you put into it...I did 1-2 hours a day, and was doing 5 WPM within a week, but my case may be atypical (I've got a background as musician, which makes me sensitive to rhythms and sounds). I'm currently rocking along close to 13, and I'm just over the three week mark since I got the tapes.
I'm sure there are other good cassette systems out there as well; I just haven't tried them.

73,
Dave (still waitin' for the call sign...<g>)

751. Kenwood TS-850S/AT Antenna Tuner Question

Newsgroup: rec.radio.amateur.equipment
Date: 1998-11-08 00:00:00 UTC
From: Mike Ekholm <mekholm@ix.netcom.con>
Message-ID: <36462015.79F9@ix.netcom.con>
Source record: 126505

Hi,

I have a MFJ-948 antenna tuner connected to the TS-850S/AT. When I place the MFJ in bypass and allow the TS-850 to tune the antenna the Kenwood tunes the antenna but the SWR meter on the MFJ indicates high SWR. When I bypass the TS-850S antenna tuner and use the MFJ to tune the antenna, the MFJ allows me to tune the antenna flat.

Is the internal antenna tuner in the TS-850 bad or out of adjustment? Any Suggestions?

Thanks,

Mike

752. FS: Yaesu FT-102, FV-102VM, SP-102P, FC-102, MD-1

Newsgroup: rec.radio.amateur.equipment
Date: 1998-11-08 00:00:00 UTC
From: Floyd Sense <sentek@sprintmail.com>
Message-ID: <7256djdcl1@ash.prod.itd.earthlink.net>
Source record: 126506

Selling my Yaesu FT-102 transceiver with all accessories. Everything is in top notch working condition and the transceiver is just back from alignment and relay maintenance by NC4L. Here are the details:

FT-102 includes these filters:

1. Wide CW filter by International Radio (1203.1, 500Hz)
2. Narrow Yaesu CW filter (XF-455CN)
3. Narrow SSB filter by Yaesu (XF8.2HSN)
4. Standard Yaesu SSB filter (XF-8.2HS)
5. AM Filter (XF-8.2GA)

The I.F. board contains one modification, the CW Filter Switching Mod by W1OT from FT Newsletter, July/Aug 1985.

FV-102VM is the Digital Memory VFO for the FT-102. This VFO includes 12 memories, multiple tuning rates, band scanning, band scanning controlled by buttons on the MD-1 microphone.

SP-102P matching speaker includes a phone patch.

FC-102 Heavy Duty Antenna Tuner: This tuner handles 1.2KW in a band-switched Pi netork configuration. Includes an in-line wattmeter with ranges of 20, 200, 1200 watts full scale, SWR meter (separate meter), and the FAS-1-4R Remote Antenna Selector. The FAS-1-4R is a coax switch that can be mounted inside the cabinet or right at the antenna location. It allows selection of four antennas from the front panel of the tuner (requires control cable). The tuner includes an extra input which is useful for connecting a dummy load and is selectable from the front panel of the tuner.

MD-1 Microphone: This mike includes buttons to control scanning when the FV-102VM Digital VFO is in use.

Manuals for all of the above are included. This rig is very clean and in top-notch operating condition. The front panels of all units are very good to mint condition. The metal tops and bottoms of the cabinets are in average condition with a few scratches but no dents or dings (the previous owner apparently didn't baby his gear as I do). If you're interested, I'll be able to email you some photos in about a week. I'm asking $1,000 for everything.

>microphone? These are noise-cancelling, thus they need a sidetone.

They don't "need sidetone" - that refers to feeding some of the audio
from the microphone back into the earphones so you can hear yourself
talk in the noisy environment of an airplane. You might well be able
to get away without any sidetone at home.

The microphones are all intended to behave like a carbon microphone,
so they need a current source. All current designs use dynamic or
condenser microphone elements, plus a preamp to provide the right
voltage and current.

If your HF rigs expect a dynamic mic and don't provide any mic
power, you'll probably have to provide external power and a DC
blocking capacitor, and perhaps a resistor pad to adjust the signal
level. If the HF radios expect an electret mic and already provide
the necessary current, you may be able to just connect it and get it to
work, or you might need a different resistor value.

If you're interested in pursuing it further, I have a schematic for
an aircraft intercom. I can look up how it powers the headset mics.

Hi Mike. When using coax you are not "tuning the antenna flat", but you are using your "antenna tuner" as a transmatch so that the transmitter will see a 50 ohm impedance into the coax cable and allow it to comfortably operate. There is nothing wrong with this and so long as you are using a fairly resonant antenna (swr 3:1 or less at operating frequencies) and good quality low loss coax at hf frequencies your losses will be negligable. There is nothing wrong with your TS850. When you are using the internal antenna tuner you are matching the feedline to your TS850 at the back of the radio, but that does not change the impedance of your antenna system and that will still show the actual higher swr at the meter in your MFJ tuner in the bypass position. If you put a swr meter in between your antenna and your antenna tuner it would also show higher swr even after you used your MFJ tuner to show flat swr on it's internal meter. Hope I helped. ---- Steve KK9ZZ

757. Free BAs to lucky Texan

Newsgroup: rec.radio.amateur.equipment
Date: 1998-11-08 00:00:00 UTC
From: John Miles <jmiles@pop.removethistomailme.net>
Message-ID: <36462CCA.1BE1@pop.removethistomailme.net>
Source record: 126511

I'm looking to relieve myself of some "projects" that I haven't seemed to find the time to work on for a couple of years now. They are taking up space which is needed for other things. None of these sets (with the exception of the S-36A) is in perfect working order, but none of them are basket cases, either, and are excellent parts mules if nothing else.

I am not the LEAST bit interested in shipping this stuff. The first person who emails me (after successfully passing the Spam-Proof(TM) I.Q. test cleverly encoded in my address) committing to a time to come and pick them up from me THIS WEEK, gets it all, for free.

Items to be given away include:

- Hallicrafters SX-28A, worked the last time I plugged it in but needs alignment and possibly a few minor repairs. Missing tuning dial trim ring.

- Hallicrafters S-36A, works great but missing front-panel screws. I have added a solid-state quadrature discriminator for good-fidelity FM reception. The mod could be easily undone. This is a really nice rig that would probably fetch $100 or $200 or more if I wanted to put it up for auction on BarnumBay and ship it (which, again, I don't.)

- Hallicrafters S-22R, I don't remember if it plays or not but it does light up and hum. Good cosmetics, probably not much wrong with it electrically.

- RCA 8T241 (I think) 10" TV set, c. early 1950s. Has basic raster and sound, but needs alignment and who-knows-what-else. Chassis is in good shape but wooden cabinet is in, well, hideous condition. Would make a nice restoration project if someone with good furniture skills were to get hold of it.

- Mostly-complete set of Riders manuals, fair to good condition. I don't remember exactly which ones I have (they're in storage), but most radio volumes are present, along with 4 or 5 TV volumes.

The only catch is that whoever picks this stuff up, has to take it ALL. :-) I'm located in NW Austin, Texas, and am available most afternoons and evenings this week except for Friday.

I have ADMS-1 and use it regularly with different templates for different uses - so I am familiar with it. You see, I'd like to do the same with a palmtop - it's not a perfect world, but I think it's a reasonable desire.

>Also, according to Yaesu, use of the software can damage your radio
>and require repairs if the connection gets interrupted, something that
>occurs quite frequently with serial connections. That's a problem
>with their protocol design and will occur with any software for
>the HT. And it's a particular concern if you are hooking up
>the device to a small handheld device.

Ouch! I ordered the software through YAESU (so they're obviously endorsing it)- and it's audio coupling like HT to HT cloning....there's no mention of problems in the manual doing the cloning and interruptions...can you elaborate on this a bit? If I clone two HT's following their directions and the audio connection is broken between the two, my Yaesu may fail? Has someone had this happen??? Did YAESU tell you this?? Yikes!

>WinCE, Java, etc.). That's why the only way to get there is via
>well-defined, robust, published protocols.

Thomas, I agree it would be nice if the manufacturers standardized and simplified computer programming and control. I'd like to be able to use templates and clone my gear simply (my ICOM mobile, my Yaesu HT, and my Yaesu mobile/packet rig) without having to use 3 different programs and templates. Until then...

>The first HT company to start selling a computer
>programmable/controllable HT with published protocols will have a very
>successful product with very little extra investment in product
>development costs. They wouldn't even have to invest time and effort
>in creating something like ADMS-1 themselves--users would simply write
>the client software themselves and share it.

I'd be first in line to buy one, too.

Thanks for your comments, Thomas.

768. Transceiver for mobile rig?

Newsgroup: rec.radio.amateur.equipment
Date: 1998-11-08 00:00:00 UTC
From: See sig for reply <ndema@astrax.nospam>
Message-ID: <Pine.LNX.3.95.981108124747.322A-100000@astrax.snafu.de>
Source record: 126522

Hello *,

I think of building a mobile rig for (QRP-) HF.
Meanwhile I compiled a list of transceivers which could become the main
building block. But I don't know details about all of them. Needed
features: Lightweight, small, low current, CW, SSB, (plus AM outside
ham bands for distress contact to an emergency service).
Here's the list:

Ten Tec Scout 555 (no AM, restricted f range; mod possible?)
SGC SG-2020 (no AM; mod possible?)
MFJ-9420 (no AM, restricted f range; mod possible?)
Alinco DX-77 (heavy, current waster, no QRP mode; QRP mod possible?)
Yaesu FT7 (no info)
Kenwood TS120V (no info)

Can anyone give some mod hints or extensions to my list?

Thanks,
Detlef, DH3DM.

They use to be available from various sources, and before that you could
get records that taught you the code. I would think code cassettes are
still available from the groups that put out other amateur radio study
material.

But you might consider getting one of the freeware or shareware programs
intended to teach you the code. I don't have any names places you can
get them handy, but the ones I've seen allow you to set them to send
random or textual code. Feed the audio from youc computer into
your cassette recorder, and then you will have your code tape. Once
you set it up, you don't have to sit there while the computer sends
the code, so it won't take that much of your time. The advantage is
that it's cheaper, and you can make more than one tape to vary the
contents.

Source record: 126529

The tuner in the radio is tuning the ant/feedline at the radio, therefore the meter in the MFJ is reading the swr on the line, and won't change with the tuner in the radio doing the matching. Your setup is working as it should. If the meters in the tuner are deflecting too much (and you think they might get damaged) when you are in the bypass position and utilizing the 850 tuner, you can do what I have done with a similar setup in the past and that is to put a small toggle switch on the back of the tuner breaking the circuit to the fwd/ref meter in the tuner.

> exactly what about radio equipment is it ok to discuss? If you'll care to
> provide me with an itemized list I'll certainly be sure to follow the rules.

Try reading the "guide to the rec.radio" newsgroups posted monthly by Jeffry Herman. Or for an example look for the 20% or so of posts in this groups that don't have a "sale" or "wanted" in the title. How about interesting technical discussion of recent or otherwise equipment? How about questions and answers about converting Motorola Mitrek mobile units to 2M repeaters? How about reports of interesting homebrew stuff?

We already have a place for selling radio equipment, it is rec.radio.swap. People who want to buy stuff look there, and often see the same stuff reposted here causing clutter.

If everyone ignores the rules we will have a wasteland.

780. Yaesu FT-901 transmit problems, help?

Newsgroup: rec.radio.amateur.equipment
Date: 1998-11-08 00:00:00 UTC
From: Frank <frank@mishey.com>
Message-ID: <724ftrgam1@news.internetsat.com>
Source record: 126534

I have a Yaesu FT-901DM that recently started transmitting intermittently, and I am not sure what the problem is. If you don't know the 901, it basically is the next step up from a FT-101 and has all solid state components, for the exception of tube finals. Basically the symptom is that everything works normal until I try to transmit. When I key up I can hear the relay kick in, but I notice no power out nor is the needle swinging at all. But if I continue to try to transmit and push the key down maybe 10-20 times, then eventually the rig starts transmitting and will do so until I unkey. But when I try to transmit again then it takes another 10-20 times until I can get the rig to transmit again. I get the same results when using a mic, cw key, tuning switch, and any form of modulation.

So, I thought maybe the power supply was acting goofy and decided to take the cover off and measure voltages in the power supply circuit today, and everything looked nominal as stated in the schematic.

Does anyone have any suggestions, or better yet, has anyone else had such a problem with a older Yaesu rig (901, 101 etc)?

Thanks.

Frank

I stand by my previous opinion
w32 has a pathetic receiver
as compared to Yaesu ft 530

Come to San Francisco hold a w32 in one hand and a 530 in the other tuned to
(any) same freq on two meters with somewhat less than a full quieting signal
... and You'll see what I mean

(use the same type of rubber duck)

Yes, it's very unscientiffic but that's REAL LIFE !!!

If you were to invest the time to read my post just previous to this answer of yours it might be a little clearer to you that I wasn't "screeming bloody murder", and this is the first complaint I have ever received about EMAIL bouncing from my address. I asked the gentleman to forward the bounced message to both EMAIL accounts I have and I would check with my ISP to see what the problem was. Possibly an attempt to filter mail to avoid spam. It might also be clear to you that I did call Icom, but didn't get too far, and decided to stick to EMAIL to avoid further costs.

>
> He owes Icom a public apology IMMEDIATELY. Right here. Right now.

When I posted in this news group, I don't recall screaming or making any unkind or untrue remarks. I was seeking feedback as to wheather my experience was an isolated case, or have others had the same experiences as I had.

> want. Do you want to scream at a factory rep, claiming misrepresentation?

If you were to reread my previous post and look more closely at the last
paragraph, it clearly states what I feel would be a reasonable solution.

It
> took you "months" to figure out you didn't know what you were doing?

I didn't work with the radio nonstop. The manual isn't exactly a shining
example of clarity. It took me a little over a month to discover that
the radio wouldn't perform as I was told it would.

You want
> to blame Icom for not throwing in two additional cost items for free?

I expect an item to perform as claimed, or the situation to be
rectified. I don't feel I should have to spend extra money to enable a
product to perform as represented.

>
> It sounds like you didn't perform a lot of homework before you shelled out
> several hundred dollars for the unit. Yes, you were talking to a factory rep,
> but at a show? Did you really expect to get 100 per cent total, undivided
> attention at a trade show?

No I didn't spend a lot of time researching to see if the radio would
live up to the claims of the company representative. Yes I did expect to
have 100 percent attention, and get accurate information. If I can't
depend upon the representative of a company to correctly represent the
company products, then I would prefer to do business with another
company. It has been my experience that most companies, when informed of
a problem of this nature will make an attempt to solve the situation in
a manor that will not send the customer to a competitor.

>
> I don't know. I just know how -I- spend MY money. If I do not know a lot about
> a product or line of products, I will "hit" my local Ham Radio Outlet with a

> uninterrupted time from a salesperson on a Saturday. And NEVER at a show would
> I expect anything other than "quick sales." But that's just me. I am sure
> there are folks here who will scream that "It's MY money - I demand courteous,
> undivided attention ANY time I walk into ANY store."

What you offer is prudent advice, and normally I do try to research my purchases to a greater degree. At the fest I went back and forth between vendors looking for the most value for the price. I communicated my requirements and the various vendors offered what they had that fit the bill. I don't scream at anytime when I am in a store. I do however communicate if I am unhappy, to the management. Most but not all of the time steps are taken to resolve my complaints.

> With Icom, I have had nothing but positive experiences with their sales and
> their service departments. I have had to send in a few commercial HTs to them
> for tweaking and repair - no problems. Honest repais pricing, and accurate
> delivery/turnaround times.

I am glad to hear that. I have received numerous EMAIL's with both positive and negative experiences. It is really in the best interest of any company to resolve as many of the complaints they receive as they can.

From: Bill Clarke <w2blc599@radiolink.net>
Message-ID: <36459c7b.0@news3.ibm.net>
Source record: 126569

I doubt the FT-100 will sell for under $1000, as does the 706 Mk II at this time - with the DSP thrown in.

I have the 706MkII, bought it before the price went down and had to buy the DSP and a narrow SSB filter. I'm not feeling bad about it.

The little box works great and isn't a new rig with unknown bugs.

It does 6 meters in all modes just great. I also use it on 75 meters all the time.

The only thing I don't like is the Noise Blanker. Like most other rigs, it causes some adjacent channel interference when on.

I keep rigs for many years, so I choose carefully. This group very interesting and informative when getting ready to make a purchase. If there is a problem - you'll hear about it here!

I did and they wouldn't listen. So I quit! The thinking was so antiquated. The ARRL was just a good ol boys club and had no idea of what lay ahead of them. Now in the recent year they have started to realize if they don't move off their old ways there isn't going to be much of an amatuer population to be king over.

As for running for Kongress! Not in you wildest dream. Expose my life to every thug that wants to pry into it. Good greif! As much as the prying press and oppositionparties will do I don't think the Pope could get elected let alone Jesus Christ himself.

Regards
James

Naturally this appeal does not apply to Jackson Murray Neece who can do
what
ever he like in the promotion of his "non-business". I particularly enjoyed
the ad for
his "Worthmore" CB amplifiers. In fact I liked it so much I passed it on to
fcc.gov.

You can only mod a box which you legally own. i.e one you have bought.
But then you cannot use it on your cable system withour prior
permission from your cable service provider.

In other words forget about it!

Antiscammer.

Maybe Icom is not set up to handle email inquiries...they'd rather handle your problem with phone calls.

> I did call. After two calls to a toll number, with long waits and no
> direct attention to my problem, I resolved to address the issue with
> EMAIL to save money.

Ever think to WRITE them? Oh - never mind...that's thirty-two cents for postage...

> When I purchased the radio I was unfamiliar with the radio and the
> manual.

Doesn't that say it all?

> ...I feel the only acceptable solutions to my dilemma are to
> refund the purchase price of the radio ($180), or provide the parts
> necessary to enable the radio to perform as represented by the
> salesperson of Icom America.

After "months" you now are dissatisfied with your purchase...a purchase you made without knowing the equipment. You lack the ability to convey your perceived "problem" to Icom on the phone, you cannot write a simple letter and mail it, and you want to change their corporate structure to include handling email inquiries.

I still, personally, see absolutely NOTHING wrong with Icom in this scenario.

825. Yaesu FT-901 transmit problems

Newsgroup: rec.radio.amateur.equipment
Date: 1998-11-08 00:00:00 UTC
From: Frank <frank@mishey.com>
Message-ID: <724j1g$4le$1@news2.jic.com>
Source record: 126586

I have a Yaesu FT-901DM that recently started transmitting intermittently, and I am not sure what the problem is. If you don't know the 901, it basically is the next step up from a FT-101 and has all solid state components, for the exception of tube finals. Basically the symptom is that everything works normal until I try to transmit. When I key up I can hear the relay kick in, but I notice no power out nor is the needle swinging at all. But if I continue to try to transmit and push the key down maybe 10-20 times, then eventually the rig starts transmitting and will do so until I unkey. But when I try to transmit again then it takes another 10-20 times until I can get the rig to transmit again. I get the same results when using a mic, cw key, tuning switch, and any form of modulation.

So, I thought maybe the power supply was acting goofy and decided to take the cover off and measure voltages in the power supply circuit today, and everything looked nominal as stated in the schematic.

Does anyone have any suggestions, or better yet, has anyone else had such a problem with a older Yaesu rig (901, 101 etc)?

Thanks.

Frank

Marv -

Charters for news groups are proposed and voted on by the users (or potential users). This groups was set up as a group for the discussion of radio equipment, specifically not for the sale of these items. If you don't like that there is a way to change the rules for the group, with very set rules about voting. If you think there is 10000 to 1 support for your position go ahead and follow the process and get the rules changes. See news.groups for details of how to propose changes.

From: tvsjr <tvsjr@sprynet.com>
Message-ID: <724p4e$dm0$1@juliana.sprynet.com>
Source record: 126591

Kind of an odd question, but I hope someone can help me out.

I have two David Clark aviation-style headsets (civilian version). I would like to adapt them to use as headsets for my HF rigs (FT-747GX, IC-706, IC-706MkII). The headset side is easy- what would it take to do the microphone? These are noise-cancelling, thus they need a sidetone.

I do not know much about how the headset works but am willing to experiment to try and get them working.

Thanks!
Terry

No, I don't. I wouldn't recomend any HT as an amateur's only radio,
but I think the VX-1R can serve as his only HT. Its very small size
means he's more likely to carry it than a bigger radio. The radio
you have on you is infinitely better than the one you left behind.

Hello all,
I have the chance to pick up a FT-726, and I was wondering what
the opinions are of them.. Granted, not the most modern rig,
however, having 50 / 144 / 432 in one box is tempting.
Primary usage would be SSB/CW.
I am also toying with the idea of 144 MHz EME in the future.

So what have you all experienced using them?

Mike I am sure you have gotten lots of answers to this question by now telling you that both tuners are working properly. !
Not to worry. The only "Dumb) question is the one we don't know the answer to but do not ask!
Also the Mfj probably has a broader tunning range than the built in tuner.
Good luck and LOW SWR to you.
Nï¿½DG

If you go to David Clark's website (http://www.davidclark.com/), you
can worm thru the menus and find specs and schematics on your
headsets. Many of these have a built in preamp and all you need to do
is supply DC to power them.

Mike....

All is OK. When you are using the internal tuner the MFJ Tuner is seeing the real SWR. The tuner in the rig is OK. When you are using the MFJ Tuner for the match, then it sees the matched SWR. So releax, it is OK. Think about it.

Jamie

Just use an ordinary 12 volt supply Even a car battery would do for a while, then you would have to charge it up. Use an Astron, Tripplite, just about any will do. See the ham mags or go the ARRL web and look at the dealer links.

864. IC 706mk2g vs Yaesu FT-100 ??

Newsgroup: rec.radio.amateur.equipment
Date: 1998-11-09 00:00:00 UTC
From: Jim Brown <dr.b@online.ftos.net>
Message-ID: <3647812F.E4F0F1C4@online.ftos.net>
Source record: 126411

I notice the latest HRO catalog shows THREE small mobile HF-vhf/uhf rigs: Icom 706 mk2g, Yaesu's FT-100 (neither of which are available YET nor can I find prices on) and I think an Alinco DX-77.

Any opinions on which way to go?

Also, any experience with the Atlas 100 autotune attenna (Yaesu) or the equivelent Icom?

Stay away from Yaesu if you want rig control. I am a Yaesu fan and like rig control but every radio they come out with has different commands and therefore requires different software. This does not allow for flexibility and ideas from many programmers since it is usually the ideas from the one or two guys who want to tackle that particular radio model. A lot of the Yaesu models do not even let you read the radio to put the information in your logging program! Such an elementary oversight. Kenwood on the other hand appears to have designed their rig control functions and controls in a uniform manner. When you find a program written for their radios it works with all models. If I was to recommend a radio manufacturer for rig control I would only look at Kenwood.

876. Need Info: AL1500 output

Newsgroup: rec.radio.amateur.equipment
Date: 1998-11-09 00:00:00 UTC
From: KF2HY <kf2hy@qsl.net>
Message-ID: <3647B949.7380C626@qsl.net>
Source record: 126423

Hello there,
I recently bought a used AL1500 and want to know the output if tube is
good condx..
My test data is;
Input(W) Output(W) Ip(mA)
40 1,300 750
60 1,400 800
75 1,600 850
80 1,800 1,000
The above were measured with Bird and good SWR antenna..
I am afraid my tube is good or not..

Would you please let me have your test report??
Also would like to know any mod for blower delay circuit..

Thanks in advance.

878. HT needed by young ham

Newsgroup: rec.radio.amateur.equipment
Date: 1998-11-09 00:00:00 UTC
From: Amdahl <support@micratek.com>
Message-ID: <729tbo$khg@masters0.InterNex.Net>
Source record: 126425

I just completed teaching a ham class and a few of my students are now looking for HTs, either 2 Meters only or dual band (144/440). Trouble is, they are young and are not terribly rich. And they are willing to accept less than the latest and greatest. I made sure they are realistic in their expectations.

If you have a used HT for sale, please forward information to me, and I will pass it along to them.

They don't expect a handout! Just a working radio at a fair price.

Thanks,
Mike Morrow
W5MDM

880. Connecting SB200 with TS520

Newsgroup: rec.radio.amateur.equipment
Date: 1998-11-09 00:00:00 UTC
From: park@surface.kriss.re.kr
Message-ID: <726fjd$g1n$1@surface.kriss.re.kr>
Source record: 126443

Hello ?

I recently purchased SB200 and now I'm trying to connect it to my TS-520S.
From reading TS-520S operating manual, it seems that I need to use REMOTE
connector in the back panel of the transceiver. There are problems.

First, I do not have the 8-pin plug, which looks rather large that fits to
the socket on TS-520 backpanel. Where can I find one ?
Second, how do I hook ALC up ? Is voltage matching or any other special
tweaking necessary ?
Third, is it OK to directly hook up the relay line between TS-520 and SB200 ?
I remember reading something like 100V, 1A flows at the transceiver's relay
contact. Is TS-520S OK with it ?

I guess TS-520 and SB200 combination was quite common.

Thanks for your help.

Regards,

881. More IC-Q7A Notes

Newsgroup: rec.radio.amateur.equipment
Date: 1998-11-09 00:00:00 UTC
From: ke4id@my-dejanews.com
Message-ID: <725l8s$7kh$1@nnrp1.dejanews.com>
Source record: 126444

IC-Q7A Notes

New software Thanks to KE4RYS for mentioning this! Yesterday I downloaded and ran the IC-Q7A freeware package by Goran Vloski. It provides an easy approach for programming the IC-Q7A. You can find it at:

http://www.hamradio.cz

KE4RYS posted an alternate location:

http://home.t-online.de/home/Ingra-Beton

I used a Yaesu adapter cable that came with the ADMS-1D software for the VX-1R. FT50R, etc., to interface with the IC-Q7A. You could also build you own cable from a schematic on the web site. The site is only partly in English, so you maybe unnerved at first, but persevere!

The Vloski software allows you to "open up" the IC-Q7A to receive below 30 MHz. The expanded receive also opened up the upper range to 1999 MHz. On my radio, I found that the unit could lock up while changing frequencies in the expanded range, requiring me to remove a battery momentarily. After that the expanded receive was lost. The expanded receive will also be lost if you press the band button. However, the BCB AM and short wave frequencies I placed in memory continued to work just fine after the VFO-based expanded receive was lost; not a bad compromise. (I used memories 187-192.)

Be sure to carefully read the "Readme.txt" file that comes with the software. The battery trick is mentioned there as an aid in case you run into problems when uploading a file to the IC-Q7A. The software also provides the capability to tune 62 TV channels with the rig in the VFO mode. This appears to be for the European TV frequencies, since the channels didn't correspond to my local TV channels.

Hint: download your IC-Q7A initial settings and save to a file on your PC, using the Vloski software. Next, save it again with a different file name, and make your changes on the second file. That way, you can easily recover the original settings with the first file if you mess up while learning to use the new software. The software does allow you to "unhide" some of the information on erased frequencies; see the "Readme.txt" file.

Speaker mics and adapter cables I am using an MFJ-295 that also works with the Yaesu family of handhelds that require a four pin plug (such as the VX-1R). One caution, any speaker mic, adapter , etc., of the single plug variety can move around in the female part, eventually causing poor contact. This can be remedied by "capturing" the cable so that it will not rotate excessively. I have seen a speaker mic with a semi-circular plastic clip that clips to the antenna, a great idea! I use the carrying strap and loop

it around the belt clip and the speaker mic cord to minimize the rotational motion.

The Yaesu CT-44 mic adapter also works nicely, allowing you to use two prong speaker mics, or even a stand alone earphone.

Extending battery life Choose the following options when programming your IC-Q7A (refer to your manual for instructions): n Enable the power saver function. n Enable the Auto power-off function. n Set the backlighting option to "OFF". This last one really extends battery life if you tend to do more than just monitor one frequency, since pushing a button, turning the tuning knob, or keying the transmitter all cause the light to stay on for 5 seconds when they are moved.

73,
Jack, KE4ID

Source record: 126449

I used such a set-up for years; there is no problem in switching the amp with the TS-520

The ALC and switching is accomplished at the REMOTE connector. The cable from the SB-200 ALC line goes btwn pins 1(GND) and 6(ALC feedback). The relay is btwn pins 4 and 5.

I have no idea where you could get a remote plug! Anyone else help him?

887. Questions about computer-controlled HF rig

Newsgroup: rec.radio.amateur.equipment
Date: 1998-11-09 00:00:00 UTC
From: Gil Bishop <gbishop@home.com>
Message-ID: <Pns12.3054$ly4.6528908@news.rdc1.ct.home.com>
Source record: 126450
Cross-posted to: rec.radio.amateur.equipment,rec.radio.amateur.misc

Hello all.

Looking to get a new radio, and am interested in your comments/experiences with computer-control. (Not the Kachina - still want a real radio with knobs and buttons - also can't imagine ctrl-alt-del in the middle of a QSO cuz my radio gets a GPF - Hi) The concept seems cool though, especially interfacing with DX cluster and logging/contest programs....

Seriously considering a KW 570S/G or an ICOM-746 or 756. The literature has plenty on the basic merits and specs of each - but not much on the computer-control capabilities. It doesn't say more than "software control program included" or "pc-ready!".

My questions: What functions can you do from the computer interface? I *think* the Icom provides a point and click "spectrum analyzer" gui - true? Does the KW provide the same? Do either/both include calls or api's for developing your own software?

Tnx and 73

888. ***NEED INFO: IC-Q7A WIDE RX .500-1.9 GHz?***

Newsgroup: rec.radio.amateur.equipment
Date: 1998-11-09 00:00:00 UTC
From: teenham@aol.com
Message-ID: <19981108215114.05289.00000977@ng153.aol.com>
Source record: 126451

Hi. I found alot of discussion about how someone made a computer control program for the new ICOM Q7A mini HT which would allow reception of .500-1.9 GHz. I found and downloaded the program. It also says that I need a OPC-478 cloning cable or one for a Yaesu (I don't think I'll be buying one though... I have the schematic for it, if anyone needs it you can email me and I'll send it to you, .JPG format.) The author of this program says alot how you can make the radio tune .500-1.9 GHz which is more than the usual 30-1.3 GHz range.... now my questions: 1. After you used the program, can you still tune .500-1.9 GHz if you are using the radio when it's not plugged into the computer interface (stand-alone)? 2. Does this "software mod" also enable full 800 MHz (I would think not, but who knows...)? 3. How good is the sensitivity on the MW and HF band? Is MW (AM) any good? Is the receiver curcuit the same as on the new IC R2? (Same as the Q7A, but no TX, 400 memory channels, and .500-1.3 GHz RX out of the box.) Please respond by email as well as in the newsgroup because my access to here isn't the best. Thanks!

73
I LOVE THE IC-Q7A!!!
P.S. If anyone has a extra ICOM OPC-478 or one of the compatible cloning cables for the Yaesu laying around that they want to sell (or trade?) for less then what ICOM is asking for one, please email me.

Source record: 126457

The FT7 has poor audio, tends to drift.
The TS120 has been known to drift. Look ar the low power TS130(V?).
SGC2020 is cutting its teeth on some problems; you don't want one yet.

The Scout is voltage sensitive, hops about in freq when voltage drops below about 11.75v.

The MFJ is a mono-bander, no AM
The Alinco(and most other more modern rigs) can be made QRP by means of ALC feedback.

Check in to the QRP-L special interest ng.

There was a qrp version of the FT-301 that might fit your bill, and a TenTec w/qrp and an lcd, but I don't recall the model.

Hi,

I have for sale:

Ten Ten Century/21 QRP rig: Bands: 80 thru 10 (no WARC). CW only
Power (max) 30W on 80M, 20W on 10M
(fully adj.)
Selectivity 2.5Khz, 1.0Khz, 500Hz
NOTE: Output on 15M is intermittent
Price: $90 ($150 if you want me to
have 15M
problem repaired)

LDG QRP automatic tuner: Input power up to 30W. Tunes most antennas in
under 3 seconds (really cool tuner)
Price $110

MFJ-860 cross needle 30W/300W power range
HF SWR/Wattmeter Price $30

All the above equipment comes with manuals.
I'm selling this gear as a package only. I will cover shipping.

Source record: 126463

To D. Cook and John McMichael -

D. Cook suggested ignoring "For Sale" posts while John McMichael suggested filtering them . . .

Tell you what fellows, how 'bout if you were to to get five hundred unwanted emails a day for the next century? After all, you *could* just ignore or filter them . . .

You see, that is exactly why readers of this NG are objecting to "For Sale" posts here . . . they are unwanted, out of place and this issue is specifically addressed in the Guide to the rec.radio Newsgroups that appears here monthly. This group was created to provide a SEPARATE forum for the discussion of Amateur Radio equipment and not for the buying, selling or trading of same. To me, this is not making a mountain out of a molehill, it is just a desire to adhere to the rules . . . a pretty simple concept that, it seems, is lost on more and more people these days . . . especially when "there is no controlling legal authority" looking over their shoulders!!

Regards,

Bill

PS The Guide is posted on the 15th or 16th of each month. If you can't wait until then, here is an excerpt from the posting of October 16, 1998:

The groups r.r.amateur.antenna, .boatanchors, .dx, .equipment, .homebrew, and .space are for more specialized areas of ham radio: discussions about antennas, the older tube based amateur, military, and commercial gear, commercially-made equipment, homebrewing, and amateur radio space operations. The .equipment group is not the place for buying or selling equipment; that's what rec.radio.swap is for. Similarly, the .space group is specifically about amateur radio in space, such as the OSCAR program and SAREX, the Shuttle Amateur Radio EXperiment; other groups cover other aspects of satellites and space. Homebrewing isn't about making your own alcoholic beverages at home (that's rec.crafts.brewing), but rather construction of radio and electronic equipment by the amateur experimenter. The .dx group is devoted to long distance amateur communications. Each of these subgroups has its own charter and FAQ; please refer to the archives to find these documents.

Those were special modems. (unusually dumb ones that could be convinced
to transfer data without having incoming data carrier from the other
end) Modern "smart modems" don't work for packet, the standards are
totally different.

In the late 80's/early90's Icom had a patient infringment problem but it must
have been resolved or the patient
ran out.

Their current models like the IC-746 transceiver even has dual pass band tuning.
I own a 746 and, according to
the July of QST, the radio has 140 db dynamic range. I don't know if I my test
was done correctly but I did
compair the two radios by receiving weak signals. The R71was able to hear the
same weak signals.

>rec.radio.swap is for "for sale" PLEASE !!!!

While I, too, would rather not see the for sale ads, it's an easy
enough matter to get rid of them altogether with filters.

I use Agent 1.5, and the following filter will do the trick to
eliminate 99% of the junk:

Pick Message | Filters | Add Kill Filter from the main menu

type the following into the Filter Expression window:

subject: "FS:" or "[FS]" or WTB or "FA:" or "[FA]"

set the kill action to "Delete"
set the filter to apply to rec.radio.amateur.equipment only (not
global or you'll wipe out all the .swap stuff)

check the "apply to group immediately" and click OK

If you're not using Agent, your newsreader should be able to do the
same thing - if it won't then get Agent (wwww.forteinc.com)

Vertical, 10 through 80 meters Cushcraft R-7......like new......Was up only 8 months before I had to move to a apartment and put it in storage. Still mostly assembled with the instructions. It would only take maybe 15 min. to toss it back together. Paid $379.00 new....I would like to get $225.00 or best offer. This is pick up or I could deliver it in the Portland Or. area if the price is right.

Beam, Telrex TB6EM.....6 element tri bander 10, 15, 20 meters. This was new in 1984. In ok shape with the instructions and blue print. It has one solid patch on one element and could use some hardware (a few nuts and bolts). again mostly assembled and marked when it came apart. This is pick up only. Make offer. cash or trade? I need to get it out of my storage unit. Would make a good first beam.

919. FORSALE - MINT Kenwood TS-520S + VFO-520S, great starter rig

Newsgroup: rec.radio.amateur.equipment
Date: 1998-11-09 00:00:00 UTC
From: jpl@hoserve.ho.lucent.com
Message-ID: <7274jp$3o6@nntpa.cb.lucent.com>
Source record: 126482
Cross-posted to: rec.radio.swap,rec.radio.amateur.equipment,nj.forsale,rec.radio.amateur.boatanchors

I have a mint Kenwood TS-520S plus the optional matching remote
VFO-520S that I would like to sell. In my opinion, the 520
and 520S are some of the best rigs around and would make a
fantastic beginner station or a great backup rig.
The remote VFO is a wonderful option to have and gives
the capability to either run split frequencies or to flip-flop
between two frequencies.

For any novices not familiar with this radio, it is all solid state
(discrete components, so its very easy to repair if ever needed)
except for a tube driver and a pair of very
robust 6146 tubes as the finals. It has a builit in power supply,
but can also run off of 12VDC with an optional DS-1A
DC-DC convertor (not included). It also has connections for the
Kenwood DG-5 digital display.
It covers 160,80,40,20,15, and 10 meters in CW and SSB (upper and lower) modes.
The receiver section is excellent and I always get excellent audio quality
reports. Many folks say that these older Kenwoods are some of the best
sounding rigs on the air.

This rig also has the optional 500Hz CW filter
installed (genuine Kenwood option).

The price is $400 firm + shipping. You might find one for a few $ less,
but NOT is this great condition.

Sure, the VX-1R is small. But I am sure glad that I had the experience of owning HTs with full DTMF pads, direct keyboard programming of frequencies, five watts' output, et al as my "first" experiences.

Although I respect the heck out of you and your knowledge, I just happen to differ with you on this point. I would rather see an individual - almost any individual - experience a more "mainstream" HT as their "first" HT experience. And I'm one who loves my VX-1R and what it can do.

Respectfully,

Clint Bradford, KE6LCS

Does anyone know if there is a differnce between the Drake AC-4 and
AC-3 power supplies electrical wise in the connector? I have both and
the AC-4 works fine but the AC-3 seemed to cause various problems including
cooking a set of finals in a T4XB. Seems like it causes the T4XB and T4XC
to go into transmit part of the time.

It isn't your rig, and there isn't any "mod" you can do to the rig
to eliminate the noise. The lights are the problem, and that's
where the fix has to go. The usual filtering tricks work, bypass
caps, chokes, etc. The hard part will be getting the neighbor
to install the fixes.

I built the AT-11 and think it's a great tuner. I had it under the seat
of my pickup on my Outbacker/706. There is a software upgrade since I
got mine so it's sitting in the shack waiting for me to order the new
chip.

Just as amazing is the fact that the prices for those old TS-130s and even
the tube final types like the TS-520s are still selling for the same
prices that they were when I got into the hobby in '87. Too bad other
consumer electronics (like computers) dont hold their value like that.

From: davem@groucho.cs.ubc.ca
Message-ID: <729lvi$f5b@groucho.cs.ubc.ca>
Source record: 126312

davem@groucho.cs.ubc.ca (Dave Martindale) writes:
>If you're interested in pursuing it further, I have a schematic for
>an aircraft intercom. I can look up how it powers the headset mics.

I looked up the schematic. It's for an RST-445 portable intercom.
The intercom regulates the external supply voltage of 14 or 28 V down
to an internal 9 V bus. Current is supplied to each mic circuit via
about 2.5 K of resistance from the 9 V bus. The mic audio is fed through
a 68 K resistor and a DC blocking capacitor to the audio amplifier.

So 2.5K to around 10 V should get you the necessary preamp current -
apparently about 4 mA.

The headset uses a 3-conductor mic plug, but only 2 circuits are used.
The tip of the plug is used by the PTT switch for keying the transmitter,
but not connected in the headset. The ring contact is "hot" for the
mic, and sleeve is ground.

Dave

962. FS: Sommer (DJ2UT) 7-Band Beam

Newsgroup: rec.radio.amateur.equipment
Date: 1998-11-10 00:00:00 UTC
From: donstone@gate.net
Message-ID: <6t%12.262$QO1.242409@newse2.tampabay.rr.com>
Source record: 126319

I have decided to sell my Sommer DJ2UT, XP70 seven band beam
(40, 30, 20, 17, 15, 12 and 10 meters).

The XP70 series beams are designed for the amateur with all-out
performance in mind. Although the boom length is only 20 feet, XP
70s have easily outpaced much larger, conventional antennas in
careful testing. The key is the total elimination of traps, which rob
performance from even the largest of multiband antennas. Because
of their high efficiency, XP70 series antennas suitably replace 4-
and 5-element antennas of conventional design. You can read about
the XP70 at http://www.sommerantennas.com/xp704.html

To avoid the need for support wires, I purchased the heavy-duty
commercial extruded-aluminum double boom version for $1300.00.
I will sell it for $450. It is disassembled and ready for pickup.

I'm located in the Clearwater, FL area (about 20 mi. west of Tampa),
and cannot ship (the booms are 20 foot long, continuous).

nope, you didnt miss anything...if you are a careful shopper and know what your looking at its usually a ripoff unless its something really uncommon that no one has. im sure all the dealers will flame me for this but i own enough gear to supply an entire response team and it was all bought on an average joe's budget.

I have an IC-2100H. The radio performs well, and I get good signal reports. The operator's manual leaves a lot to be desired.

I am not sure if this applies to the 2100H, but there are two optional modules necessary for features like remote frequency entry, and DTMF operation, and tone squelch functions, on the 2000H. You might look into this before you complete your purchase.

Incentive licensing in concept was probably a good idea at the time it was first discussed, but they way it was put into practice created a terrible situation which still has consequences today.

Sometime in the early 1950s, someone proposed that everyone who held a General or higher license be granted all amateur operating priviliges. It was about that time when the Novice and Technician class licenses came into being. The Novice was good for one year and not renewable. It was either up or out after that year. The Technician was designed for technical experimenters and was limited to operating priviliges, I think from 220 Mhz and up, with 50 and 145 Mhz being added later. In order to get the Technician, you had to pass a mail order written test which was the same as the General, and a 5 WPM code test if you were not a Novice and already had credit for it. I think that a Novice and Technician license could be held jointly by the same person if the Novice time limit had not yet expired.

In effect, the General class was the top of the line license as far as operating priviliges were concerned. After 1952, testing for the Class A (Advanced) license was dropped, although existing Class A holders could continue to renew as Class A.
No additional priviliges were granted to Class A operators.

This was the way of the ham radio world for 14 years.

In the late 50s, some deep thinkers somewhere decided that hams were not improving themselves for some reason. They were not changing over to SSB

as fast as they should and these deep thinkers thought it may have been because many of them were too technically ignorant about the then state of the art. In some quarters this was a scandalous situation. There was much discussion of finding a way to force technical competance via the testing and reserved operating privilige process. There was also some concern that many hams were letting their code skills slip because they spent too much time on phone. The appliance operator label was just coming into vogue, and it was thought that valuable design and building skills were being lost. This debate raged in the pages of QST for over 5 years.

The final result was that on a specific date in 1968, anyone who was a licensed General class operator lost a good amount of their operating priviliges on HF. Anyone who held the old Class A (at one time the top license in terms of operating priviliges) also lost a considerable amount, although not as much as the lowley General did. The Extra Class license became the new top of the heap and if you wanted your priviliges back, you had better pass the Extra exams with its 20WPM code requirement.

INHO the largest problems with Incentive Licensing were:

1.- Taking away priviliges that already had been earned. It should have affected new people entering the service, but everyone else should have been grandfathered.

2.- The most talked about reason, technical competance or the lack of regarding SSB had been effectively bypassed by the availability of commercial equipment which actually needed less ability to use than the old AM equipment. By 1968 the
technical argument was moot. Most of us were turning into appliance operators anyway.

3.- It caused a meltdown in the interest of ham radio in the years immediatly after 1968. Take a look at the size of the Cq, and QST magazines of that period.

4.- It was one of many reasons why American ham equipment manufacturers started to go out of business.

I will always believe that Incentive Licensing amounted to a power and privilige grab by a very few people in power at the ARRL who wanted what amounted to a "country club" operating privilige setting for the good ole boys in their circle. For a very long time I thought that the ARRL and the FCC thought that General class and below license holders were held in contempt. I was a memeber of a ham radio club in the late sixties which had a sign saying "ARRL's definition of a real ham...Extra Class License... 2 letter call" It took a long time for me to get over it.

It is interesting to note that the ARRL is doing everything it can to make sure that no one looses operating priviliges with the coming license restructure. I think this stems from bitter past experience.

Mine went together quickly and easily. The only problem I had was
that I wired the VSWR sensing backwards (naturally) and had to
swap a couple of wires to get it to calibrate. No biggy, but I did
have to take the board out of the case to do it, and that is a pain,
so test first.

I'm looking for info on how Kenwood did mods on the TS-520 using the DK-5??? kit to enable the use of a digital display like the DG-5. I know that there were 3 separate signal leads brought out and a fairly complex mixing and filtering done on the signals to arrive at the actual transmission freq. as displayed on the analogue dial. Any help with where these pick off points are in the TS-520 would certainly be appreciated. 73 de VE6INM (Glenn)

Ditto Adam's reply. I'm very happy with the performance of the radio, rx and tx. Yes, there are a few frequencies (maybe 4?) between 118 MHz and 1 GHz that will self-quiet, but I expect that in such a broad band receiver. I've never had a problem with the radio's sensitivity, and certainly not in the 2m band.

975. Re: MFJ 1798 10 band antenna any good?

Newsgroup: rec.radio.amateur.equipment
Date: 1998-11-10 00:00:00 UTC
From: Paul Michaelson <psm@intrepid.net>
Message-ID: <3648B938.F6CA53D5@intrepid.net>
Source record: 126332
Cross-posted to: rec.radio.amateur.antenna,rec.radio.amateur.equipment

I have an MFJ 1798. The 1798 is an excellent DX antenna. It is top fed with a counterpoise at the top of the antenna. This makes for a very efficient and low (ground) loss antenna system. Apparently the radiation angle (take off angle) is very low making the ant terrible for close in communications. If you want to talk to the local boys on 75 meters you won't like this antenna. BUT if you are a DX hound you will like it alot. The hardware is a bit flimsy and the antenna is extreeeeeeemly difficult to assemble. The instruction manual is so poorly written that you have to guess what the heck they are talking about. If it were written in ancient greek it would be no harder to understand!! If you are not familliar with antennas then you probably will have a horrible expierence putting the thing together. I don't recomend this antenna. While I have not personally seen one, I am told that the GAP elevated feed antennas are much better quality and the are pretuned. It took me almost a week to put the mfj antenna together and tune it!!!! I have alot of expierence with antennas too! Bottom line it is a great DX antenna that is almost impossible to put together for anyone but experts. Buy a GAP!! The 6 and 2 meter performance is not so great. The 2 meter section is just a quarter wave rod stuck ontop of the counterpoise. A quarter wave up at 50 ft will do okay, and that is what you will have if you mount the antenna at 30 ft (the 1796 is about 20 feet high.) The 1796 is almost $300 and not worth the misery of putting it up and tuning it. BUY A GAP!!!

Good luck,

Paul

Newsgroup: rec.radio.amateur.equipment
Date: 1998-11-10 00:00:00 UTC
From: Doran Platt <jeepp@erols.com>
Message-ID: <3648D2F6.7F4CECF5@erols.com>
Source record: 126343

Generally, David Clark headsets are "carbon compatible. That is to say, the are designed to work into a standard 50 ohm single carbon button mic circuit. Carbon mikes are driven by a dc source and capacitively coupled into the driver stage. DaveC uses the 12v DC bias to drive an amplifier inside the headset to get the proper Z and drive level. You can take either take the beast apart and put a Z matching xformer (Rad Shack) 8 ohm to 500 ohm or you can supply 12v to the mic, cap couple it to a pot and set the proper drive for your ham rig. The plug (typically a PL-68) is tip is PTT, ring is mic, and the sleeve is ground. Any help??

I think he means the neighborhood, I. E. the city or some other governmental entity. Hire a lawyer and file an interference suit in Federal Court. Good luck!!!!
Crazy George
BTW, those lights are not noisy if properly connected and installed. Startup HF noise is detectable, but not serious. However, when the bulb fails, and the starter runs amok, look out!! Good bulb start time should take less than 30 sec.

>What does the ER 1 mean when displayed after turning the unit on?

ER 1 Means (from the RS manual) "Internal RAM error" To clear it you must clear and reinitialize the memory...say goodbye to all the freq's you spent all that time programming into memory and do the following: turn off transceiver, hold down "F" & "D" while you switch it back on. If it happens again, have the internal lithium backup battery replaced.

This is MUCH better than a ER 2 message. If it shows ER 2, it means the PLL has unlocked. Very Bad News. If it won't reset by the above procedure, (yes, it did work for me once!) you must (again a DIRECT quote from the RS manual) "have the transceiver repaired by an authorized Radio Snack (that's what it says) Service Center. The really bad news is I can't find a radio snack service center anywhere...(hihi)
Hope this helps

The return of the all priviliges General license would make the
oldtimers whole, as well a simplifying the license structure as the FCC
requires. The elimination of the Extra Class license would be logical
for simplification, but now another group would be mad for wasting their
time testing, and of course how would we know who to give the status 2
letter calls to?

>Ken
>KK4BH
>remove the (NOSPAM) if replying direct.

I have converted Kenwood MC-60's to use with both my Yaesu FT-920 and my Icom 706. They work fine with either rig. The Kenwood rig's mike jack supplies 8 VDC from pin #5, the Icom 706 provides 8 VDC from pin #1. The Yaesu provides only 5 VDC from pin #2, but the MC 60 will run with 2 AA batteries, so I assume there is a dropping resistor in the MC-60 preamp circuitry somewhere.

The Icom mike impedence is 600 ohms, the Yeasu is 500-600, and the MC-60 is switchable to either 50K or 500 ohms. The 500 ohm setting on the MC-60 is close enough for either rig.

The up-down buttons on the MC-60 will work fine on the Yeasu by just connecting to the correct pins on the mike jack, but the Icom uses a single line with added resistance switched in to determine the up/down direction. This too can be easily added to the MC-60 with just the addition of a 470 ohm resistor switched into pin #2 on the Icom to make it go down. Without the resistor it will go up when pin #2 is grounded.

Hope this helps...

Hello Jay:

I had one of the early FT-726 radios and was very pleased with the station. It was retired after a visit from a lightning strike that pretty well toasted the rig. If you are going to pick one up BE SURE that it has the accessories you want, i.e... 2/440/6m and the satellite duplexor as these are no longer available and impossible to find at a reasonable price. It has since been replaced by the FT-847 which is a great UHF/VHF rig and a passable HF. It leaves a bit to be desired in the CW and computer control department.

Hope this helps..

Probably because modern vehicles do not have much flat metal dash space to drill holes in to mount the old mike hangars. Newer cars are all contoured padded dashes and it's a lot easier to find a crevice or protrusion that you can fashion a "peg" to without hacking up the dash. In my vehicle, a piece of coat hanger wire formed to an "S" shape works fine. One end is slipped between two padded panels and it catches behind the panel on one of the panel studs. The other end of the "S" protrudes about 1/2 inch from the dash - perfect for hanging the mike from my IC-8500.

1025. FS: Kenwood TM-733A's $350 shipped ..

Newsgroup: rec.radio.amateur.equipment
Date: 1998-11-11 00:00:00 UTC
From: Larry <net1@netohio.net>
Message-ID: <72dbl4$fog@news.dx.net>
Source record: 126195

I have two TM-733A's for sale. Both are in excellent condition with no marks or scratches. Each includes the radio, mounting bracket, DC cords, duplexer, optional tone decoders, original boxes and manuals.

#1. Used at home in very light duty. Has the original backlit TT microphone.

#2. Sat on shelf most of it's life! Has original new microphone but cord was removed. Has remote front panel kit to compensate for value of microphone cord. If you can use a soldering iron, put on a new cord and have it all!

I have for sale an ICOM IC-756. Serial number 03367. This unit is as close to new condition as possible. It has had very little use, mostly listening. Comes with all of the stuff that was packed with the unit as new, that is hand microphone, power cable, manual and the original box. $1600.

I will ship it anywhere in the continental US via UPS if you prepay.

COD shipment available via Federal Express available but you will need to pick up shipping charges for this form of shipment.

I will furnish references if you desire.

Larry W9MDX

Message-ID: <72cl4f$3l2$1@fnord.systemsoft.com>
Source record: 126200

I get these 'sportsman' catalogs, and I see that there are now
FM transceivers operating at 27MHz on the old RC channels
between the CB channels. I realize with the bandits out there
the channels were pretty much useless for RC (you sure
wouldn't want to risk a decent RC Aircraft, but I wouldn't risk
my old RC boat with Controlaire reed system!) but I didn't
know the FCC was allowing FM Voice on those frequencies.

When did that change?

Or is it a loophole? Or is it just another case of a company selling
something they don't give a crap about being legal or even working,
like the radar 'jammers'. Sure they work, and they're 100% legal!!
Now I got this land in Florida for sale cheap too, as long as your
spending your money, right?

Jim, I'm sorry I don't have all the books with me as I write this.
Maybe later, I can dig them out and I'll provide you with additional
information.

I use Solar Power to charge the Battery for my car radio. (The power
for my car's 2M/440 radio is seperate from the car's power.) The system
has been running for about 1 1/2 years.

There are several factors you'll need to consider when selecting the batteries
and solar panels. First is the battery a Deep Cycle Battery OR is it
just a regular car battery?

If you take a 40 A/H battery and drain it for 2 hours at 20 amps, you will
ruin the Battery. No car battery will stand being taken to zero. Deep
Cycle Batteries can stand being taken lower, but even the Deep Cycle Batteries
should never be driven to Zero.

Car Batteries loose ABOUT 1% of their capacity per day. That figure will
vary, but you can use it as a rough estimate. This is important, because
a part of your solar power will be lost, just trying to keep the battery
up.

The ratings of Solar Panels are under full sun conditions. In less light
the panels produce less power. I remember in one table in one book I have,

Southern California (where I live) receives an AVERAGE of 5.5 Hours (full sun) per day. However, in the winter, it's less, 4 hours (full sun) per day. I don't recall the numbers for Georgia, but I'll try to look them up.

With 4 full sun hours per day, a 15 watt panel produces about 1 amp of current in full sun conditions. (I'm assuming that you'll have a 15 - 17 volt panel that's used to charge a 12 volt battery.) The 15 watt panel would then produce 4 A/H (Amp/Hours) per day (average) in the winter in Southern California.

The problem is more complex than this, because if I mount the panel to face the sun, I'll get more power than if it's not facing the sun. The 4 A/H number assumes that the panel IS facing the sun.

Another factor that I don't have the data to is the efficiency of the battery. If one puts 4 A/H in, in no way will you get 4 A/H back. I just don't know the number, so my wild guess is 70%. If that's wrong, whoever knows the correct answer, please post it. Assume the number is 70%, with 4 A/H in * 70% = 2.8 A/H we'll get back from the battery.

Things to consider:

How much current does your transciver take in receive mode?

How many hours will you be running in receive mode?

How long (total) will you be running in transmitt mode?

Total the current on a per day, current required and be sure to post the answers here.

When I find the additional information, I'll post it in the user group for you.

Until then, I hope this helps.

Bob

i ran a solar powered repeater in south florida for about a year unitl lightning took it out. i used a deepcycle marine batt and 6 40 watt panels. the contoller i used was a trace. i brought the leads from the panels into the cabinet and mounted the controller right next to the batt, that way you have some compensation for losses through your power leads. if you mount the charge controller near the panels what happens is that by the time it reaches your batts you have lost some due to the resistance in the cables and your batt will never acheive full charge. try to stick with glass faced panels not the ones that are covered with some kind of "goop". the "goop" yellows with age and the plastic sheet that is laid over the "goop" sometimes seperates. when it seperates the goop turns black and the panel becomes useless. the glass faced panels are the way to go. there is a company called alternative energy engineering (i beleive) that has a very good catalog. they have some small charge controllers called "sunsavers" that are reasonably priced and feature low voltage disconects. you want to have the low voltage disconect so you dont trash your batts when cell voltage goes too low. unlike NiCd, lead acid should not be totally discharged, it will ruin the batt.

> won't transmit illegally". Clues for the clueless?

Bob, some of us are interested in 70cm sub bands, such as the satellite freqs in the 430's, that are not usually enabled on ham HTs without a modification. And I'm looking to mod my Q7 because a friend has a 420 MHz repeater in the Denver area that's linked to a 6m tranceiver. Sure, I already have other radios that will cover the entire 70cm band, but I'm greedy - I want ALL my radios to cover it!
There's also the possibility that any unit's receive range will extend with a tx mod. Not for cellular, but other, "legal-to-listen-to" freqs. Case in point: after modding my Kenwood TM-V7A, UHF receive went from 440-450 to 340-470.
I agree that there are probably way too many people modding for the wrong reasons, but not all have illegal uses in mind.

Source record: 126254

I left the total text of your messages at the bottom of this one for easy reference....

I use 88 watts from two panels: One rated at 50 watts, another, a factory second, rated at 38 watts (but nearly as large as the other one). I agree, consider getting a larger panel than the 15 watt one -- you'll end up only maintaining a charged battery with that one.

There are several items you have to think about when setting up your system:

1) Panels are rated at their wattage at what is called the maximum power point -- the point where current and voltage give (what else?) the maximum power. A much better rating is to find out their amperage. You'll find that your panel at, say, 64 watts is probably measured at 16 volts and 4 amperes, but when hooked up to a battery it produces 14 volts at 4.1 amperes. Compare by amperage. Always.

2) The larger the panel, the lower its price per amp (and per watt) will be. a 15 watt panel is a poor choice for your load -- look at a 50 or 75 watt panel to start with. Yes, it's a few hundred dollars, but how much did you spend on the rig?

3) The general rule for non-tracking, constantly exposed, never shaded panels is that you get the equivalent of 5 hours of direct sunlight on them per day. Use that for determining your Ah/Wh potential per day. (You *did* figure out how many Ah's your equipment will use before starting this, right?)

4) Never, *EVER* let a shadow be cast on your panel -- it might as well be disconnected if even a single cell has a shadow is on it.

5) For charge controllers, look at the pulse-width charge controllers, especially if your battery is a gel-cell. I purchased a Morningstar, 12A controller because it was the only one that published RF emissions specs. There are a lot of other manufacturers out there -- Trace is a well-known one with a good rep. (My controller cost $120.) The point of a pulse-width charge controller is it will efficiently bring the battery right up to full charge as quickly as possible. A controller which cycles off at say, 14.2 volts and back on at 13.8 with a simple relay won't do the same job.

6) Make sure your battery is sized for the job -- I use an 80Ah gel-cell I got at a hamfest for $30. (Hamfests in the Denver area are frequented by a guy who removes batteries from life-critical systems after only a year -- even if they haven't been used.

Anyway, that's a starting point. My favorite purchasing place is
Backwoods Solar Electric Systems -- they're helpful and honest. They
used to be cheap as well, but they've kinda fallen in line with the
rest of the industry. Can't blame 'em...

http://www.backwoodssolar.com/

(and I'm just a satisfied customer...)

Hope this helps!

1048. Yaesu VX-1R 15khz off frequency

Newsgroup: rec.radio.amateur.equipment
Date: 1998-11-11 00:00:00 UTC
From: mhgates@my-dejanews.com
Message-ID: <72cq5u$7f2$1@nnrp1.dejanews.com>
Source record: 126260

Please advise.

My Yasesu VX-1R seems to be transmitting and receiving exactly 15KHZ off (below) frequency in the 2 meter band (FM narrow mode). (For example: I can receive our local 146.940 repeater if I program in 146.925). The 600 khz offset works, and I can hold a good conversation on the repeater (full quieting according to the other ham) if I set the radio to 15khz below the frequency.

The radio works fine in the FM broadcast bands (FM wide), and I'm not sure yet about 70 CM. I've already tried resetting the microprocessor (both hard and soft). I have found a way to use the radio, but am not sure of the root cause of this problem.

It sounds like something small rattling around inside when I shake the radio. I did drop it recently, but it didn't seem that great a shock because I had the CSC-71 case on it. I also lifted something heavy the other day and it might have put some pressure on the radio while it was in my shirt pocket (which might explain the loose component).

I noticed the problem recently when I had trouble receiving some of the area 2 meter repeaters I had saved in memory. I discovered that if I applied some pressure to the case the frequency would sometimes come in more clearly. I tried scanning in the 2 meter band and found that I could receive the frequencies perfectly, but they were exactly 15 KHZ below the real frequency.

I did not have the tools to compeletely disassemble the radio to locate the rattling component. So after I tried the hard reset, I re-programmed my memories so I could receive the repeater (-15KHZ). I used the memory naming convention to name the frequency correctly. As I mentioned, I can transmit and hold a conversation on the local repeater.

I'd appreciate any advice on what might be causing this (filter circuit?). The big clue, I think, is the rattling and the -15KHZ. Will it live, or do I need to get it serviced?

Thanks!

73,
Mike Gates,

KF4UVO

Hello all! Just wanted to drop a line to let all of you know that there is a new way to post your advertisements if you have something for sale, something you are looking for, or just have information that you want to share with others. Kinda like this ole newsgroup. If you would like to join the list and receive mailings from people with their goods for sale, and also to be posted of specials that we may be running at CB City, go to the CB City website at 'cbcity.com' and follow the instructions on the main page. I will do my best at keeping problems to a minimum, by not allowing people to flame others or to try and piss people off. This will not be for that purpose, and never will be. I hope that you all join the list, and if I can do anything at all to help you, please let me know.

If you would like to send email to the list, send it to:

cbstuff4sale@listbot.com

Thanks from all of us at CB City.

Dean
CB City Radio Shop

Hi,

I recently acquired an old Knight Kit R-100A receiver, and it is missing a main tuning knob. I've scanned a couple of images in of it so you can see how it
looks. It is about 1.9 inches in diameter.

A photo of the front is available on the web at:
http://www.wwc.edu/~frohro/Knight_knob_top.jpg

A photo of the back of the knob is on the web at:
http://www.wwc.edu/~frohro/Knight_knob_bottom.jpg

If you have a spare, please send me a note!

Thanks & 73!

>letter calls to?

Simple:
The FCC mandates all U.S. amateur licenses to expire at
11:59 p.m., UTC, December 31, 1999.

The FCC mandates all current amateur radio licensees must
re-test prior to that date and time in order to be licensed
at the level of examination for which they pass all the
required components. Prior license level irrelevant and be
damned; no "grandfathering," no "good ol' boy" actions
permitted.

A 90-day grace period, beginning 0:00 a.m., UTC, January 1,
2000, will allow "last-minute exam-takers" to continue
operating while their examination results and applications
are processed.

Those current licensees who do not re-test, or who the FCC
says are not yet certified as licensed by the end of the
90-day grace period, must cease operating until such time
that they re-test and are officially certified by the FCC as
licensed.

Piece of cake.

Everybody wins: Equal opportunity testing; trying out the
new licensing standards (whatever they come to be); more
stuff for the VECs, ARRL, Fred, et al, to do.

Now *everybody* can whine ... ;0)

Rob:

You should be able to find very similar knobs at most electronic supply houses, even Radio Shack. Or are you restoring it, and concerned about maintaining original parts?

If Steve was going to be buying from a manufacturer there are several
5 Band beams such as the Force 12 "5BA". But I think the point was
that Steve is shopping for a used antenna.

Shaun Hancock,

This question was asked not long ago. Did you check dejanews.com for the postings?

I bought one new when they first came out and had it back to ICOM three times for stepper switch problems. Some people have no problems. I traded mine in while it still worked and only 720 owners knew about the problem.

I need the chapter on the initialization matrix. I want to reconfigure the rig from the US type 24AT to 24ET, the european version. In fact the only thing missing is the 1750Hz push-tone to open the repeaters here. Icom told me, that I has to resolder a couple of straps in the matrix to do the trick, but I need the info from the service manual.

I'll pay for copy and mail in IRCs or green-stamps.

Thanks

Message-ID: <8FA84CD.002B006F55.uuout@hamradio.org>
Source record: 126287

You can remove the knurled screw from the center of the windscreen and set the windscreen aside. Then, the "pot metal" ribbed center piece that the knurled screw threaded into can be unscrewed itself. You may need to use a large pair of pliers GENTLY to start unscrewing it.

This will give you access to a bunch of small parts - fiber washers, another "windscreen", etc. Note how this windscreen goes in - it has a "bubble" to give clearance to the diaphragm below. Finally you will see the magnet assembly with the diaphragm and "voice coil". A dynamic mic is really a speaker in reverse.

The whole assembly (mic element, matching transformers, etc) can now be "poured out" with a little effort - it will come out to the extent that the four wires will allow it.

Check for foreign metallic pieces (magnets love to pick them up) and clean them out completely if you find any. Above all, treat this assembly carefully and lovingly to prevent damage - oh, yes, keep it away from metal filings!

Be careful to reinstall the windscreen next to the diaphragm so it doesn't interfere mechanically with it. Oh yes, the whole assembly is keyed to fit into the housing in one direction only.

Al - K8EUR

-> Does anyone know of a third party that can repair EV-664's?
-> I called Electrovoice and was told that they no longer stock
-> the dynamic elements and can no longer repair them.
->
-> I have two mikes in the same condition. Both will respond
-> to direct physical contact such as tapping or scratching the
-> wind screen; however, neither will respond to sound.
->
-> Also is there a way to disassemble them to check for physical
-> damage or broken wires?
->
-> Any help would be appreciated. Thanks
->

Is
>it just an amatuer thing? thanks
>
>

Probably because modern vehicles do not have much flat metal dash space to drill holes in to mount the old mike hangars. Newer cars are all contoured padded dashes and it's a lot easier to find a crevice or protrusion that you can fashion a "peg" to without hacking up the dash. In my vehicle, a piece of coat hanger wire formed to an "S" shape works fine. One end is slipped between two padded panels and it catches behind the panel on one of the panel studs. The other end of the "S" protrudes about 1/2 inch from the dash - perfect for hanging the mike from my IC-8500.

1085. Adapting Kenwood Desk Mikes to IC-706MKII???

Newsgroup: rec.radio.amateur.equipment
Date: 1998-11-11 00:00:00 UTC
From: kk4bh@mindspring.com
Message-ID: <3649143f.6224002@news.mindspring.com>
Source record: 126368

Hi Group,

Has anyone out there adapted a Kenwood desk mike to a IC-706MKII? The Icom mikes are much more expensive than the Kenwood. I'm mostly concerned with impedance matching and if the 8 volt supply from the 706 is compatable with the mike preamp.

TNX in advance

From: Jim Finney <jpfin@worldnet.att.net>
Message-ID: <3648F0ED.DB9BB526@worldnet.att.net>
Source record: 126369

Hello,

I am in the process of putting together solar power for my hf and vhf/uhf stations. Anybody have any suggestions on what kind of solar panels and charge controller to use? Also, what is the maximum lenght run of power cable from the panel to the battery? I run 100 watts on ssb and cw hf (20 amps at key down) and around 10 watts FM (5 amps at key down) on vhf and uhf. Also, I have a packet station used for the local dxcluster. I can hit it good using just 5 watts. My battery is rated at 40 amp/hours and I am considering a 15 watt panel for recharging. Most of my operating time is spent listening with occasional transmitting.

Would appreciate comments from experienced solar power operators.

Thanks,

Jim

>Shaun Hancock
>KF4ZIC

I'm posting this to the group because it's possibly of more general interest. In a nutshell, avoid the rig like the bubonic plague. RUN, don't walk, as fast as you can in the opposite direction.

The rig uses a stepper-driven rotary filter selector for the output passband filters in the transmitter. The problem is that as the rig ages (they're OLD now), the rotary assembly sometimes (always?) fails to step when the microprocessor says it should. The rig will then just keep stepping (for a long time, or forever) trying to get the filter onto the right band.

The rig is long-since out of serviceable status with ICOM, so if the one you want works great, and you get it cheaply, it's good if/until this part fails.

Yes, you can possibly clean, adjust, and otherwise fiddle it into working again, and yes, many of them still work, but if/when it craps out, you're more screwed than normal.

All other rigs use either a manual bandswitch or a set of reed relays enabled by the microprocessor; neither is this electro-mechanical kluge that ICOM gave us with the 720.

Good luck, and avoid it.

Dave

I tried that once - the catalytic reaction as the epoxy set up nearly fried my eardrums. Turns out hot wax, carefully poured, works much better...

Actually, when the neighbor kids get obnoxious at 2 AM, a quick call to the local Police Dept. takes care of it. But we don't have one of those here (even though I've recently been accused of being a "Knet Kop", complete with orange jumpsuit). So we're left with little recourse except to filter the postings you'd rather not see or just live with them.

Certainly, there are people who've posted for sale ads without knowing that it's forbidden by the charter - they've probably learned a bit from this thread (I'm guilty!) Likewise, a few more newbies come on board every day, have never heard of a "charter" and don't know they're doing anything wrong. And then there are those who are going to keep posting them whereever they feel like, no matter what the charter says (proprietors of certain small businesses come to mind).

All in all, in an unmoderated, uncontrolled group like this, it's a pretty formidable task to try to get everyone to adhere to the rules. Perhaps if this issue had been battled out when the group first formed and the for sale ads squelched then, along with ongoing vigilince to assure they don't start cropping up, we'd have a chance. But in the current state of affairs, I don't think it's a wise use of one's time.

So I choose to just put the filters in place and never be burdened with the "for sale" ads. Keeps the blood pressure low, minimizes the time I have to spend browsing the groups for interesting messages and generally makes me a happier person...

>Would appreciate comments from experienced solar power operators.

Your basic plan sounds good. I've run a similiar station on solar power for years. However, I think your solar power demands would be better provided by a 50 watt panel, (that's what I use), rather than 15 watts. Also, with that station setup, you probably should add one 40 aH battery if you operate much HF at night. As far as the regulator goes, if you don't have much solar power wattage compared to the battery system, you might get away without any regulator. It's much more efficient. Just monitor battery voltage and make sure it doesn't go above about 13.5 volts, otherwise you risk overcharging the battery and shortening it's life.

Good luck

Ed WB6SAT

1091. ADMS-1D Did I get the wrong thing??

Newsgroup: rec.radio.amateur.equipment
Date: 1998-11-11 00:00:00 UTC
From: hackercentral@my-dejanews.com
Message-ID: <72b3lm$q4d$1@nnrp1.dejanews.com>
Source record: 126374

Hello! I recently ordered the ADMS-1D package from an online hamradio house. My radio is a Yaesu FT-50 with the hi-power batt and ftt-12. It had the 'freeband' mod done on it (I use it to tx into a dummy load to test business band radios) Anyway, i got the ADMS-1D package, but I don't know the difference between -1D and the ADMS-1C. Should I send back the 1D and get the 1C? Is the 1D newer? Is it any better? Will it interfere with my freeband modification? Is it any more or less "stable" and likely to screw up the radio's memory? (Theres a big warning sticker on this disk that says:

"WARNING: Care should be taken to prevent interruption of the cloning process while data is being transferred to the radio. This interruption may cause damage to the main processor of the radio. Such damage may not be covered under warantee."

Pretty ominous, huh?

While I'm at it, I was wondering if theres anything I should know about using this package (either one) from anyone out there who has tried it. I keep hearing stories of radios doing wierd things under the control of ADMS.

Thanks for any help anyone out there can provide!

Oh, I see. So if your waveform is square you file off the corners then?
Just how does one do that? Won't it mess up your scope?

1101. ft-847 price reduced plus free tuner !

Newsgroup: rec.radio.amateur.equipment

Message-ID: <19981111090353.25748.00000035@ng45.aol.com>
Source record: 126384

the price of the ft-847 suddenly took a dive to $1640 at Lentini in Connecticut
plus Yeasu is giving away your choice of either : FC-20 autotuner or ATAS 100
moble antenna/scredriver type. The original price of the FT-847 was $1900
when it was introduced.

I am not in the Ham business but though I would pas this along to the other
hams who were just about to buy one but couldn't afford it.

Tim

Dave:

your ignorance of the 720A shows through. YES the stepper relay is noisey. But about the only time it fails is if it gets corroded, lightning strike or someone is curious and wants to look at. (up close)

The PLL is the most difficult part to work on, but parts are still available, the nice thing most (99%)of the parts are generic, readily available, the exception is the processor, but with over 15,000 of the 720A's made, a used one isn't usually a problem to find for parts, if the part is even needed.

The 720A, with proper care, provides years of trouble free service. It doesn't have all the bells and whistles, but it doesn't cost a months pay either.

By the way I have new stepper switches if anyone needs one. In 15 yrs I have had to replace only one.

I agree it is a old radio, and as with any old radio, there are some sacrifices, but it still performs very well and they have allot of life in them.

1108. FT-301D - $235

Newsgroup: rec.radio.amateur.equipment
Date: 1998-11-11 00:00:00 UTC
From: Frank Krozel <frank@electronicinstrument.com>
Message-ID: <3649AECE.B3ABFF4E@electronicinstrument.com>
Source record: 126391

I have a FT-301D for sale.
This radio works, and puts out 100 watts on all bands 160-20, with 80 watts on 15 , and 75 watts on 10 meters. Perhaps a tune up?? The case was repainted, but the front panel looks good. Comes with the following:
Manual
160 meter crystal (this was an option)
10 meter crystals (these were options)
Crystal filter for RF processor (this was an option)
AM filter (this was an option)
One partial digit is out, on the .0X readout. In other words, 7.258.08 looks like 7.258.0h. It is just one segment on the hundreds of Hz. Perhaps a chip? Anyway, it works but I am looking to move it along to someone that wants it.
I like to trade, and may be pursuaded to swap for something I may like, only lowbands, sorry.
Frank work 630-924-1600

As an un-biased 3rd party, and after reading Louis Bybee's post regarding the "misrepresentation" of the Icom rep, I must say I agree with his position. I also see the usual flames from people who can not comprehend the "king's English" in what was a very concise letter. But, this is exactly why I NEVER buy equipment/gear from ham shops or fests...always from retailers (like Fry's Electronics) who offer 30 day money back (no questions asked) guarantees and very reasonably priced 3 year warranties. This stuff is too expensive to gamble on "sales" people who know NOTHING about the product and on whom we depend for information about said product, or to gamble on the chance of buying a "lemon" and having to send stuff back and forth and writer letters and pay shipping, etc etc etc before you even get a chance to use it. So what if Fry's is 30 bucks more?! Jeez. Enough said....Stop all the dang personal attacks on people. You guys sound like Icom gave you a million dollars or something. Hey, they are a corporation, not your best friend. Chill out.
CODE FOREVER!

That's the Alinco DX-70-TH...forget it. I returned mine. A very simple rig (which is GREAT!!!!), but not for $999.00! For eight-hundred more, you can get a rig that will dance around the room. I personally would stay away from "mobile" HF rigs, period, no matter who makes 'em. There is always a trade-off with a smaller size in the forms of lower quality and higher price. If you are going to use it as a base..buy an FT-847 or similar if you are going to shell out that kind of dough. For me...?...give me a $95.00 T-Kit and 3 watts and I'll show you QSL cards from Europe.

I have a set that I am thinking of parting out
it is a T 217 - R 278 series.
I believe that this particular set came from the Lubbok
FAA control tower.
The thing is built to withstand a fall <IMHO> It tunes from
220-399mhz, and is AM only. I do not know the
actual output of the xmitter, BUT the chain goes
as follows.....
6v4 <X2> into 2c39 into 2c39 into 4x150 <x2>
This unit comes with the matching power supply
and the cabling to make it work together.
It will do whatever <150 watts carrier I believe>
all day, all night and into next year. This is VERY
heavy, and I WILL NOT SHIP. IT will be for pickup
or delivery in 200 mile radius of North Ft Worth TX
and available until 11-25. IF I get no resonable offer
I will part the unit out.
I do have some brief diagrams of the unit, and the
schematics are on the sides of the perspective
units. I am sure that because of the era, the reciever
sensitivity is not the best it could be.

I will entertain best offer OVER $150 plus gas money.
There is at least 150 dollars in the 2c39/4x150 and
sockets/chimneys. Not to mention the SUPER heavy
duty power supply that could be built from this unit.

I can be reached via email at
km5rt@ticnet.com

thanks for your cosideration

I usta maintain these beasts for the FAA at Bakersfield. Indeed they
are well built and it would be a shame to part a working unit out. They
will do a nice job on 220 AM as I made a couple of experimental 220
contacts back then.

>occasional transmitting.

Lets look at some numbers. A 15 watt panel is going to produce full output for about 5.5 hours a day (sunny day). So you have 82.5 watt-hrs to start. Charge controllers aren't 100% efficient, though good ones can be close. Batteries aren't 100% efficient either. With careful attention to detail, you may wind up with 70 watt-hrs a day, or roughly 5.5 amp-hrs at 12.5 VDC. That can power your HF rig for 15 minutes, or you FM rig for about an hour. Of course receiving draws less current. Typical value for a HF rig is 2 amps on receive, a squelched FM rig will be somewhat less. So if you don't transmit, you can receive for about 2.5 hours on one or the other, but not both. You probably will have other system losses, however, so those figures are probably optimistic.

It should be obvious now that a 15 watt panel probably is way too small for your needs if you figure on doing any transmitting. A 75 watt panel, or a pair of 75 watt panels, is going to come closer to meeting your energy demand.

Now your battery is another problem. You can't use a car battery if you are going to draw down more than 10% of its amp-hr rating. Deep discharges will quickly kill a car battery. Fortunately, the 15 watt panel and the 40 AH battery make a good match as long as you're careful to not draw the battery down further than the amount of energy that the solar panel has supplied that day.

But as we've learned, that's probably way too little to meet your energy demand. And every day is not a sunny day. So in addition to needing bigger solar panels, you're also going to need bigger batteries. Ideally, you'll want deep discharge batteries which can tolerate the drain placed on them to carry you through a few cloudy days. That winds up being a pretty big chunk of battery capacity. And you need enough excess solar panel capacity to replace that cloudy day drain fairly quickly when the sun does come back out.

My system uses two 200 amp-hr deep discharge batteries, two
75 watt solar panels, and a line powered charger. The latter lets
me carry more loads than the solar panels alone would support.
If AC fails, I have to shed some loads to maintain system balance.
If I'm careful, I can ride out a couple of days of bad weather without
line power. Since line power is very seldom down that long, I think
my battery bank is large enough. But if you want to run pure solar,
you may want both more batteries, and more solar panels to charge
them, to see you through a week of foul winter weather.

I built my own controller, using a Cosmac ELF to monitor amp-hrs in
and out of the battery, panel and battery terminal voltage, etc. It displays
that info on a LCD panel, and uses it to manage the system. It can
switch between the solar panels and the line charger, and it can
automatically cut loads if the drain becomes critical, or if it senses
that line power is lost. I'm still not totally happy with it. The ELF is
woefully obsolete, and needs too many support parts. A PIC might
do better. You have to be careful that your controller doesn't become
a significant energy drain in itself.

Wiring losses can be significant in solar systems. If you need to
make a long wiring run from the solar panels to the batteries, you
might consider using a high efficiency chopper at the panels and
step the voltage up before sending it down the wires. If you integrate
that into your charge controller via pulse modulation, that can serve
as your battery charge regulator too. All you need at the battery is
a diode (Schottky) to turn it back to DC. As long as the battery is
taking charge, it will level the voltage back down for you, so you
don't need to worry about your equipment. (You may need a noise
filter to get rid of hash, however.) I use short fat battery cables
between the panels and the batteries, so I don't have to worry
much about wiring losses.

Note, you may also want to make provisions for charging the
batteries off your car. That can let you ride out prolonged bad
weather and a line outage.

That's not good. You need to get this fixed before that
loose part shorts something critical and totally fries
the radio. The radio must be achieving PLL lock or it
wouldn't transmit. So it is probably the reference frequency
which has shifted, but that should affect all bands. FM
broadcast isn't a good test of that because the channels
are so wide that 15 kHz won't make an obvious difference.
If 70 cm is off, then the case is pretty good that you've
suffered a reference frequency shift. I don't know what's
loose in there, but I'd worry about it. If you don't feel
comfortable working on it yourself, send it to Yaesu.
Their service turnaround is generally pretty good.

I am gonna sell my trusty Yaesu Ft-209 2M FM HT at the Tampa
Hamfest in a week. Any idea on what a good price for
an antique but reliable synthesized HT is?

Thanks,

Andrew, KA2KHD

1124. Re: Yaesu VX-1R 15khz off frequency

Newsgroup: rec.radio.amateur.equipment
Date: 1998-11-12 00:00:00 UTC
From: mhgates@ibm.net
Message-ID: <72f9ad$a5k$1@nnrp1.dejanews.com>
Source record: 126152

Gentlemen:

Thanks for your ideas, Mr. Jones and Mr. Bradford.
I tried the hard reset and it didn't help.
I'm not ready to throw in the towel yet by sending it
in for service (hope I don't eat crow later)...

Tony in Michigan left me a phone message with what
I beleive is the solution. He had the exact same problem
with a loose SMT component in his VX-1R and soldered it back in.
I'm not very experienced in SMT soldering, but have done PTH,
and I'm willing to give it a try. I'll be picking up some
extra small tools I'll need to disassemble it today.
I also need to find some tips on SMT soldering.

I believe the loose component must be a diode or transistor
for a filter (wish I knews my circuits better) because I now
see that 70CM is off by exactly 45khz, which is three times
the 15khz that 2 meters is off. Still, the radio is doing
fine except for this inconvenience.

Tony: Thanks for the call. I appreciate the effort you went
through. Your message was pretty clear, but I will try calling
you this evening for more info on the procedure you used, and
to say hello and thanks. I could not call yesterday because
I was watching some rambunctious kids (mine) by myself.

I just signed up for Deja News and it doesn't seem to have
my correct e-mail address, which is
mailto:mhgates@ibm.net

Sincere Thanks!

73,

Mike Gates,
KF4UVO

With all due respect, after years and years of hearing so much hype from
so many other different companies (most aren't into Ham Radio), I tend to
be more than a little unimpressed when someone promotes something with
words like: "New", "Exciting", "Unbelievable", . . .

Please understand I'm NOT saying that your ADI ValueMobile sounds stupid.
Rather, I just feel that one doesn't need to hype it up and try to make
it sound bigger than life.

I assume that your ADI ValueMobile will be going to different Ham Radio
Stores, Ham Radio Meets, and maybe even Ham Radio Meetings. That's great.
I'll even guess that while the ValueMobile is there, Hams can purchase
equipment at a reduced price. Also a good idea.

That would all be very good and something I'd enjoy seeing. So, really
you don't need to call it, "one of the most exciting projects in the history
of the amateur radio industry." It tends to sound a little fake.

Sincerely,

Bob Diaz

Are both of these items still available? There are a number of older
PK232 units around that need upgrading. Is the daughter board and
upgrade chip available either from Timewave or other sources? Cliff K7RR

1128. FS: Two Portable Shortwave Radios

Newsgroup: rec.radio.amateur.equipment
Date: 1998-11-12 00:00:00 UTC
From: n2rud@my-dejanews.com
Message-ID: <72feqlfag1@nnrp1.dejanews.com>
Source record: 126156

Two portable shortwave radios for sale - very nice, clean condition!

1. Sanjean ATS-803A - $125

Larger size (like Sony 2010), gull-coverage (150kHz-30MHz), BFO/SSB, digital, tuning knob, 4" speaker, FM w/ stereo on headphones, 9 memories, 24hr clock/alarm/sleep modes, runs on 6 D-cells and 2 AA-cells, comes with shoulder strap, AC power supply, box and manual. Excellent condition! Did the simple mod to eliminate chuffing - hear the DX stations now!

2. Sony ICF-SW-7700 (no, not the SW-77...) - $75

Smaller, world band radio, AM/FM/LW/SW, digital, tuning knob, has large LCD showing tuning bands (like an analog radio) and also shows digital readout of frequency, includes Japanese FM band below 87 Mhz, runs on 4 AA-cells, has power jack, earphone jack, 24hr clock/alarm/sleep modes, 5 memories on each band, comes with nice faux-suede case and manual, no box. Very good condition! This radio makes a nice travel unit or gift for a beginning SWL. Amazingly easy and intuitive to tune and program.

Shipping by UPS or US Priority Mail included. Any questions?
If interested, send email to me at: ajninno@syr.edu

If UHF is off by exactly 3 times what VHF is off, this strongly
suggests that the unit's master oscillator is off frequency.
Few other parts of the circuit are common to both VHF and UHF,
and both receive and transmit.

Radios these days often have a single oscillator that serves as
a reference for a PLL that controls the actual VFOs that provide
transmit and receive frequencies. If your reference oscillator
was off 100 PPM (100 parts per million, or 0.01 percent), both
transmit and receive frequencies would be off by 14.4 kHz at 144 MHz
and 45 kHz at 450 MHz. As far as the internal circuitry is concerned,
the radio is still operating properly - the PLL locks for transmit
and receive.

But since all frequencies are derived from that one oscillator,
an error there puts everything off frequency.

A 100 PPM error is quite large for a radio's master oscillator. They
are normally calibrated to within 5 PPM for UHF radios (or sometimes 10
PPM). The whole range of adjustment is usually something like 50 PPM
or less.

It's possible that the crystal itself was damaged in the fall. It's
also possible that some other damage has ocurred in the components near
the master oscillator, and fixing the problem will return the
oscillator to close to the right frequency.

Dave

1130. FS Yaesu FT-101ex HF transceiver.

This is a very nice Radio!! The 101ex comes with all of the goodies,
CW Filter, Cooling Fan. 10-80 meters plus 11, easily puts out over
100 watts with out even working hard. All is in working order.
The tubes were just tested and they are in good shape. This rig also
comes with a matching Yaesu hand mic and power cord for 110-240v.
Original manual. Plastic still on front of radio, this rig has never been
Mobil and has never been around smoke.
I just got a new radio and I can only use one at a time.
$270 plus shipping from Brooklyn NY 11229.

Message-ID: <72fk6a$k4n$1@nnrp1.dejanews.com>
Source record: 126162

Greetings,

I would like to hear from those who've owned or used the ICOM R-100 Mobile Receiver. I'll assume it's hot enough on VHF-UHF bands, so I'd really like to hear more about it's performance on mediumwave AM/FM and shortwave. I know the R-100 is not a serious DX machine, but I'm like to have both shortwave and VHF-UHF scanning in the car, and this looks the best unit around. Comments? If you know of any better brand/model for use in a car, speak up. The only other radio in the running is the Becker Mexico, which has no VHF-UHF.

Please send replies by email to: ajninno@syr.edu

Thanks for listening.

Anton

i've got an hm-103.
it's the mic that came with my 706.
no dtmf but works/looks great.

a friend of mine used it with his 2710h while i replaced a chip resistor
in the stock mic to bring the audio down to an acceptable level.

my experience with them has always been great.

my 706 needed fixin' and they got it done an back to me in 10 working
days.
warranty work, no charge.

a ham in the area called them about his 2710h being very hot in regards
to
transmist audio.

they shipped him a chip resistor, schematic, and instructions via
overnight
mail.

just my few dealings with them, but i've had good luck so far.

Hello, I have for sale a 40 watt mobile Master II that has been converted to repeater service. It was converted using the Versatel package. See 73 magazine for ad. It has the painted handle which is the newer model. It is in great condition and is currently on 448.100 / 443.100 . Controller is not included. $300 Shipped. If you have any questions please email me.
73, Mike N0XD

Yeah, Bob, I'd agree with you if some NEW, UNHEARD-OF firm came here and
shouted that...

But Ken and ADI have proved their worthiness to the Amateur Radio community.
With quality AND customer support. So, for those of us who are familiar with
ADI/Premier/Pry-me, this news promises to be exciting.

Hello, Dave.

Thanks for your very knowledgeable response.
I took the radio apart and found a very tiny
screw was loose. It looks like it goes in a
small cylindrical metal coil of some sort.
I tried to insert it and screw it back in, but
was not successful. The cylindrical unit moved
clockwise about 1 turn. I finally just put the
screw aside and put the radio back together, satisfied
that it wouldn't short out now.

The radio still seems to work, (still deviates by
15/45khz) and I also was able to talk on simplex to
another ham here at work. Your explanation makes me
think I should take it in for servicing rather than
trying to handle it myself. It is a very small unit
and hard to see and handle.

Thanks again for taking the time to respond.

73,

Sincerely,

Mike Gates,
KF4UVO

What you are seeing is caused by the tuning knob moving, albeit very
small it doesn't take much. If the reference xtal moves the display will
not change, it is referenced to it and does not know the xtal has moved.
Try tightning up the VFO knob tension and see if it helps.

1159. SG-2020: A user's review by VE3JSJ/G4RDG

Newsgroup: rec.radio.amateur.equipment
Date: 1998-11-12 00:00:00 UTC
From: Gordon <gem1@ibm.net>
Message-ID: <364B9E16.43E5@ibm.net>
Source record: 126187

USER REVIEW of the SGC "SG-2020" Amateur QRP Radio.

I would welcome comments re this radio and this review

This is a user review, based on my experience with this radio over four month period. As an ordinary user, I have not done any "technical" testing to determine if the radio meets advertised specifications, other than to measure the power consumption. To give you an idea where I am coming from, I use an ICOM 706 as a mobile in our family mini-van, and a Kenwood TS50S as a base station unit. I have had several years experience with an Argonaut 509 while on canoe trips in Northern Ontario. I also used the original "QRP Plus" receiver on canoe trips. Inevitably these radios provide the baseline for my impressions of the SG 2020.

As an antenna I have always used a 70 ft 'long-wire', fed through the bare-bones MFJ 16010 tuner. Tie a suitably shaped stone to one end, fling it over a tree branch and - instant antenna. Light-weight too. Maybe not the most efficient of radiators, but OK. I remember on one occasion we were forced to camp on a small island. No treees, only 6 foot bushes. The antenna worked fine. It has also been successful laid out over the snow/ice on a lake while winter camping.

I won't spend much time comparing the ICOM 706 and the Kenwood TS50S. The ICOM 706 is a newer model, and as such has more features which I consider essential in a portable radio, e.g. built in SWR meter and detachable front panel which the Kenwood TS50S lacks. The 706 is therefore ideal for mobile use - the controls are simpler to use while mobile. As a base unit, the TS50S is fine - but then if you want a base unit, perhaps a more 'full-sized' rig would be appropriate. More $$s though!

However, for operating canoe portable, both the 706 and the TS50S have one major drawback. Both pull around 1 amp on receive alone! Not a problem in a mobile, but when the only battery is the one you have to portage in your canoe pack, you have a problem. On some trips I did take a 25AH Gel Cell (Tungstone Energy Products SBS30). Weighs in at about 25 pounds. A 4 AH gel cell is much easier to carry, but would only give about 20 minutes operating.

Of course the Argonaut 509 was excellent. Many hours operating from a pair of 6 volt dry cells. With the lights off it pulled about 145ma on receive. Under good conditions the 5 watts RF input was not a problem on 40 or 80 LSB, and CW almost always got through quite reliably. But, it wasn't a particularly 'tough' radio, mechanically, a disadvantage when canoe-packing, and eventually the 5 watts RF input was a limitation for

my needs - providing emergency /'health & wellfare' communications for the members of the canoe trips I was leading. I won't mention the QRP Plus again - it may well have been fine for CW, but SSB was not good! Inferior to the Argonaut 509.

What attracted me initially to the SG 2020 were the original promotions of 200 ma on receive! So I placed my order real early. By the time I received the radio, the promoted power on receive had increased significantly, and in the radio as I tested it, was about 450 ma (lights off). This is heavier than I would like, but is acceptable. A 4AH gel cell gives me several hours operating, time for casual rag-chews without compromising having enough in reserve for emergencies. On long trips (a week or more) I carry two 4 AH hour cells, keeping one fully charged in reserve for emergency use.

The SG 2020 is extremely well built. Looks like a military radio. I haven't drop tested it (yet!), but I think the solid metal (steel, not aluminum) shell which surrounds the radio should provide as much protection as is possible. This does up the weight a bit, but it is a price worth paying for a canoe-tripper like myself. The receive audio is very good - on a par with the TS50S and 706. Reports on my audio have also been good. The level of speech compression is not user controlled, but seems to be just right. And 25 watts LSB on 80 meters is a 'usefull' power output, not many S-units below a 100 watt signal. And power is adjustable continuously down to 1 watt. The memories each can be programmed for RF output power, mode, bandwidth. There is also a built in SWR meter function.

What do I not like about the SG 2020? The front panel controls are a bit crowded. They are easy to use, but if you only have thumbs, they are a little awkward! In all fairness though, I have not come up with a better front panel layout, given the small space available. When the radio is in CW mode, the PTT on the mike is disabled. I don't like that! There are times when the PTT button on the mike could function as an emergency keyer. Also, the button which toggles the meter between SWR and RF OUT is a momentary switch. Putting these complaints together, you can see how difficult it is to manually tune an antenna tuner for minimum SWR. You have to do the following SIMULTANEOUSLY:

Hold the mike in one hand, press PTT and say "AHHHHHHHHHH"
Press the front panel button to toggle the meter display from "RF OUT" to "SWR"
Adjust antenna inductance and capacitance etc.

If the SWR/RF OUT switch was a true PRESS-IN/PRESS-OUT, and if carrier was transmitted when the mike PTT was pressed while in CW mode, tuning would be much easier. At least I wouldn't have to "AHHHHHHH" while tuning. Using voice audio to tune also introduces variations in the RF which complicate the process.

The original SG 2020 I received (Serial no. 4176) had software version 1.02. Several times all the memories scrambled to 68Mhz! The radio

otherwise was not affected, and could still be used with manual tuning etc. The SGC technical support staff came up with a front panel key-sequence which cleared the scrambled memories, and I was genuinely impressed with their diligence and helpfulness. I understand from my contacts with SGC that the "scrambled memory" problem might be caused by "glitches" (momentary interruptions?) in the DC I was supplying to the radio. This certainly could be the case - though I would not expect it from a battery supply. SGC suggested I return the radio for an upgrade/update to the software. I received it back from them after about 3 weeks, which to me is a satisfactory turn around time.

CONCLUSIONS

Would I recommend the SG 2020 ? Definitely yes. Good value for the money. Toughly built - good for the great outdoors. Still a bit heavy on receive power requirements, but much better than anything else comparable out there!

I'll be happy to respond to any questions I receive by email: gem1@ibm.net

1165. Help on EV-664

Newsgroup: rec.radio.amateur.equipment
Date: 1998-11-12 00:00:00 UTC
From: Harry <rfman@mindspring.com>
Message-ID: <01be0d6c$150300e0$2e4e56d1@radio>
Source record: 126201

Does anyone know of a third party that can repair EV-664's?
I called Electrovoice and was told that they no longer stock
the dynamic elements and can no longer repair them.

I have two mikes in the same condition. Both will respond
to direct physical contact such as tapping or scratching the
wind screen; however, neither will respond to sound.

Also is there a way to disassemble them to check for physical
damage or broken wires?

Any help would be appreciated. Thanks

Harry NK9R

The AC3 and AC4 are esentially the same.

The first thing I would do is to compare the bias supply voltages obtained with the AC3 to those with the AC4. Problems with the bias supply can cause lockup and/or short PA tube life.

Looking for comments from owners of the new Alinco DJX10T wideband handheld receiver. I would like to know how the radio performs on 80-40 meters SSB and CW... does it have any selectivity???? how well will it pickup on 80-10 using self-contained antenna??????? Any shortcomings of the radio???? Was intersted in monitoring SSB and CW in the evenings on 80-40 mostly.

Thanks, Tom, WA3KQA

I would wait for the 706MKIIG... the 706MKII is a proven radio - all bugs worked out - and to now get 50 watts on 2 meters and 20 watts on a new 440 band is great ... I wish I had waited - but I have not been dissappointed in my 706MKII at all. Its a great radio - performs well on all bands - all modes.

Do you think antenna connector could be bad???? The center conductor very easily can come loose on the circuit board - you can tell if the antenaa connector on the radio is turnable either to left of right.... if properly secure - it should not turn. I didnt find getting inside on soldering that bad.

Cross-posted to: rec.radio.amateur.equipment,rec.radio.amateur.misc

I recently purchased a used Icom IC737 which appears to have a fault on the tuner board. I have replaced the diodes and chip as recommended by Icom but to no avail.

Does anyone have a copy of the service manual for the 737 and if so could they please fax me a copy of any pages relating to the tuner section. I would be particularly interested in any test points, voltages etc.

My fax number is 519-839-5360.

Many thanks,

Larry VE3YET.

Shortwave reception using the stock rubber antenna
on the DJ-X10T I tested in Monitoring Times was inadequate,
though better than the AR8200.

You really need to use a better antenna than the VHF/UHF
helical supplied.

Had to use the built in attenuator when I fed the DJ-X10T
with a 132 foot dipole, otherwise signals were completely
unintelligible due to overload.

The review appears in the Nov 1998 issue.

Hello,
I have had an amateur radio web page on QSL.NET
(http://www.qsl.net/ki0dz) for over 1.5 years. I am presently expanding
it to include a subpage on amateur radio resources. It will largely be a
"page o' links." I am presently looking for pages to link to (reciprocity
would also be nice) in the following areas: homebrew, antenna design,
intro to amateur radio, QRP, state or provincial resource pages (list of
clubs in a particular state or Canadian province, other countries
considered), mobile operation, intro/general info on HF, Six Meters, VHF,
UHF, computer programs for amateur radio, emergency communications,
alternative energy, traffic handling, packet, satellites, contesting,
ATV, and intro to SWLing. Any other major topic I'm missing?
I will personally review each site submitted for consideration. Also,
suggestions for the "recommended reading" section will also be greatly
appreciated. Feel free to visit the page as it is now (click on "amateur
radio resources") to see the general format. Thank you.
73 de ki0dz
PS. Also, if you live in or near New Hampshire, I would like leads on
computer/IT recruiters/contractors as my family is looking to move to
that state. Thanks.

I did some digging through all my books...

For the area of the country you live in, You'll receive a yearly average of between 4.5 --> 4.7 peak sun hours per day. However if you look at the numbers for the time from December 7 to January 4, you can expect to receive about 3.5 --> 4 peak sun hours per day. [SOURCE: The Solarex Guide to Solar Electricity, Third Printing - May 1981, pages 61 & 63.]

The numbers assume that the Solar Panels aren't in shade at any time during the day. Also, the numbers assume that the panels are facing the sun with a tilt angle of 45 degrees and are facing due south.

Let's use the worst case number of 3.5 peak sun hours (average) per day. A 15 watt panel (for charging a 12 volt battery) is going to put out about 1 amp of current at peak sun. Thus the panel will supply 3.5 amp/hours (A/H) of current.

However, no battery is perfect; you never get back all that you put in. I have no idea what the correct number is for the rate of return, so I'll use 70% as a wild guess. (If anyone knows what this number is, please post the correct nember here.)

Thus: 3.5 A/H * 70% = 2.45 A/H is what you'll get back.

Let's say your radio takes 1 amp of current in receive mode. (Please look at the radio's specification sheet or better yet, take a meter and measure it.)

2.45 A/H / 1 Amp per hour = 2.45 Hours in receive mode for each day.

You said that the radio takes 20 amps in transmitt mode; here's how long you could run:

2.45 A/H / 20 amps per hour = 0.1225 hours = 7.35 minutes per day.

Boy, that's going to be a short QSO! <smile>

Remember you can do either 2.45 hours of listening OR 7.35 minutes of sending, BUT not both. If you do both, you must cut down on both times.

Assume you are going to transmitt for just 5 minutes and receive the rest of the time. (5 minutes = 0.083333333... hours)

20 amps transmitting * 0.0833333... = about 1.67 A/H

Thus the capacity of 2.45 A/H per day would loose 1.67 A/H per day for transmitting.

2.45 A/H - 1.67 A/H = 0.78 A/H left for receiving.

0.78 A/H / 1 amp per hour (in receive) = 0.78 hours = 46.8 minutes

Your could increase the numbers by using the radio every other day or every third day. It isn't perfect, because the battery will loose about 1% of its charge per day.

These numbers assume that that discharge rate is even. That is, a 40 A/H battery will yeald 1 amp for 40 hours OR 40 amps for 1 hour. NO, it does NOT work that way, but I wanted to keep the math as simple as possible.

Let's say you purchased a 60 watt panel that puts out 4 amps at full sun. (Notice I picked a panel that is 4 times the current of the 15 watt panel.) Using that same calculations, you could run for 20 minutes in transmitt AND about 3.12 hours in receive mode.

By the way, I use a 65 A/H Deep Cycle Battery and charge it with a 15 watt panel. Most of the time I run the dual band 2 meter/440 at just 5 watts in transmitt. That takes only 3 amps. In receive mode the radio uses 0.5 amps. This allows me to work with a 15 watt panel. However, if I ran in high power mode (50 watts) all the time, the current draw, would run the battery down. Even when I must use high power mode, I see a drop in the battery's voltage. My guess is that even a 65 A/H doesn't like the heavy current draw. You may want to consider a bigger capacity battery.

73,
Bob

As point of information, there appear to be two versions of the
European model. Icom designates these as EUR1 and EUR2. The diode
configuration (as shown on the schematic diagram) is different between
the two. It appears that one is for Italy, and the other for the rest
of Europe, but I don't know which is which. The one for Italy has
frequency coverage the same as the U.S. version for VHF.

1191. Re: Solar Power, Part 2

Newsgroup: rec.radio.amateur.equipment
Date: 1998-11-12 00:00:00 UTC
From: tvsjr <tvsjr@sprynet.com>
Message-ID: <72ehln$kh0$1@juliana.sprynet.com>
Source record: 126227

Is 100% solar a requirement, or simply an emergency backup for power fails? If it's a backup, I would think about running a small power supply (something in the 10 amp range) into it when the power is up. That way, you can keep the battery fully charged. Then, if the power should fail, the solar panel acts only as a small source of power- it would help some, but you could use the battery for your rigs. Be careful though, because many batteries don't like excessive current draws (especially gel-cells). I have been told that there are two types of lead-acid/gel-cells, one designed for high-current, short life; and one for lower current, longer life (eg more capacity & shelf life).
Of course, you could always buy a bigger solar panel!

Hope it helps...
Terry

Hello, and thank you for reading this.

I have just bought a new ICOM 706 Mark II and noticed that it seems to drift off the freq that I set it at. For instance, I set it to 54.0125 on SSB and a few moments later it is at 54.0124 or otherwise.

Would the better freq crystal help here?

Thank you for your advice.

Hi all, Anyone Interested In a Fluke scopemeter (Ver 123) as this was purchased In error from RS Components for £820.00 and Is not even 1 week old. This Oscilliscope/Dmm has a 20Mhz dual bandscope which is handheld and has a batt life of 5 hrs and 1 hr fast charge. This is a state of the art tool which is menu driven and so does not requier any setup at all, the funtions are as follows: Vdc,Vac,True rms, Hz, Duty cycle, Pulse width, Ohms, Continuity and Capacitance Etc. It as also a Trendplot which can display graphs of min and max readings and is also date and time stamped and this can be then printed out via a computer, its fully rechargable and comes with all manuals, books and Adapter/charger.....brand new never used at all £650.00.

If Interested e-mail me for more details or see a RS Components cateloge No: 240-9522.

Thanks to all

Brian

1198. Trying to decide between FT-8100 ans FT-8500

Newsgroup: rec.radio.amateur.equipment
Date: 1998-11-12 00:00:00 UTC
From: tjff@lanl.gov
Message-ID: <tjff-1211980641570001@mamie.lanl.gov>
Source record: 126234

All,

Just as I was about to whip out my credit card to buy a Yeasu FT-8100 dual-bander, I see in the AES catalog that the FT-8500 is "on sale" for about $100 less than the 8100....The difference between them seems to be that the 8500 has some additional features such as a spectrum "analyzer"/ indicater, a feature menu, more scanning modes and controls on the microphone. It has less RX coverage, although the 8100 is "cellular blocked".

Yaesue advertises the 8500 as "top of the line", so why is it selling for less than the 8100?

Your comments/experiences with the the rigs would be most appreciated!

tjf

I agree with the last post. You need to use an external antenna but if it's a good one, you need to use the attenuator or the receiver gets swamped. When I went to florida last week I took a portable SWL antenna with me (about 20ft) and threw it out the hotel window. The reception was very good. I don't know how well the rcvr would do with CW as I haven't tried that, but AM and SSB are fine. I would recommend the unit to anyone.

After warm-up the radio should stablize. If it doesn't it may have a
problem. The CR502 high stability
crystal is recomended for data modes ie RTTY, Packet or Packtor to name a
few. I have the CR-502
in my 706mkII and it drifts a little when I first turn it on but then it
settles out within a few Hz after
warm-up.

I have not owned either radio, but I have friends that have had poor experiences with each. I know of one early 8500 that a friend had that he had to send back to Yeasu for repairs, sorry I cant remember what the problem was, but I remember he was very disappointed with the turn around for the repair. I know of another 8500 that also had problems, don't remember what happened with that one. Another friend had an 8100 that quit receiving and sold to another ham who sent it back to Yeasu for repair under warranty and that guy has it sent in for repairs for the second time. I certainly don't want to sound like a Yeasu cinic, I own a 51R and had a 736R and a 767 GX all of which served me well without problem, but these two radio seem to have a few bugs.
One possible explanation about the price is that the 8500 although "better" is older, it was of the same generation as my 51R and the 8100 is a newer radio. The 8500 is probably on it's way out if it hasn't already been discontinued.

Hope this helps.

>and its annoying to see the same ones in every one of them. KO0D.

Then you *really* need a better newsreader. A good newsreader will only
show you a crossposted article once, in the first group you encounter it.
In every other group it will be marked as already read. If you work in the
Windows world, get a copy of Forte's Agent. It also has excellent kill
filters. If you are lucky enough to work in the Unix world, then rn, trn,
nn, tass, etc all have the proper facilities to deal with crossposts, and
all have good kill filtering capabilities too.

It would be nice if people would observe the group charters and only
post where things are supposed to go. But the chance of making that
happen is essentially nil, so the alternative is to use a reader with filters
to effectively form your own custom newsgroups. That works quite well,
and is perhaps the only sort of group management that can work with
the anarchy of usenet.

Just to add my counterpoint to this, I've ordered and received items
from AHR (by mailorder) and have been more than satisfied with their
service. The people who I've dealt with by phone have been courteous
and efficient, and the things I've ordered have always arrived at my
house (about 3000 miles from their shop) aobut 4-5 days later, well
packaged, and always with one of their specials catalogues packed in
with the boxes.

I'm a happy customer who will recommend them to anyone I talk to.

I have two TM-733A's for sale. Both are in excellent condition with no marks or scratches. Each includes the radio, mounting bracket, DC cords, duplexer, optional tone decoders, original boxes and manuals.

#1. Used at home in very light duty. Has the original backlit TT microphone.

#2. Sat on shelf most of it's life! Has original new microphone but cord was removed. Has remote front panel kit to compensate for value of microphone cord. If you can use a soldering iron, put on a new cord and have it all!

Hardly. This group is being overerun with off topic (forsale) ads. Cut out the clutter, use rec.radio.swap for radio sale stuff, and use this groupd for what it was made for: the discussion of radio equipment.

The trend seems to be that people are posting sale stuff in *all* the radio groups, perhaps under some misguided notion that that will make more people see them and want to buy. In reality, people who want to buy look in the swap groups, people who want to talk DX go to the DX groups, etc. The current trend is toward a set of useless groups cluttered completely with forsale spam, which then degenerate to computer, wine and maybe cheese forsale.

1218. I need the Alinco DJ-190 power-monitor modification

Newsgroup: rec.radio.amateur.equipment
Date: 1998-11-13 00:00:00 UTC
From: Chris Musselman <chris96@concentric.net>
Message-ID: <364D34C6.4A293AE@concentric.net>
Source record: 126004

Hello-

I just bought another Alinco DJ-190 from Tech America (they're $99. again), and it has the same problem as my old one-it stops transmitting and goes back into receive each time I key it, after using a new set of alkaline batteries for ten minutes of transmitting or less. There was a mod posted to fix this problem-I think it involved removing a power-monitoring chip inside the radio that is too sensitive.

Do you have the details on this? Thanks-

Chris W6ATV

1220. Kenwood Th-79a Display Fades pls help?

Newsgroup: rec.radio.amateur.equipment
Date: 1998-11-13 00:00:00 UTC
From: Jeff Goebel <jg-heg@rrnet.com>
Message-ID: <72hltk$op7$1@news.rrnet.com>
Source record: 126006

I have a Kenwood Th-79ad which is about 3 years old.

When on a QSO for long enough for the HT to warm up in my hand, (10 mins or so) The display fades for a few mins. and then I loose the display entirely. After 1/2 hour or so of Rx'ing only, the display returns to normal.

(it does this even with a fully charged battery, and also with external supply)
Has anyone experienced this? Repairs?

Thanks,

Jeff Goebel N0VHB

Pryme/ADI has scrapped the plans to come out with an HF rig. I spoke with a factory rep in September at a hamfest and he said that with radios like the SGC 2020, Alinco DX-70th, and the Kenwood TS-50 already available and close to the $500 price range, they could not compete with the features. They do however have one built, but they just couldn't market it for the price they were originally thinking.

1222. EIMAC 8877 TUBE QUESTION

Newsgroup: rec.radio.amateur.equipment
Date: 1998-11-13 00:00:00 UTC
From: Murray Green <mgreen@erols.com>
Message-ID: <364C6718.5447@erols.com>
Source record: 126043

A friend of mine has a commercial ship to shore transceiver that utilizes a single Eimac 8877. When he keys the amplifier on his ship to shore allocated frequencies, the Bird watt meter shows an output of 1000 watts. (He is using 3 6146s to drive it and the Bird slug is a 1000 watter so there could be more power not shown.)

Immediately after showing a 1000 watt ouput, the power simply drops all the way down to perhaps 50-100 watts which very well could be the exciter power. The question is, is that power drop indicative of a soft or faulty 8877?

I have used a pair of Eimac 8875s and as I recall when they went soft, I could not tune to maximum output power. Over time, it just put out less and less. So Im not certain if the 8877 quick drop off from 1000 watts, is the tube or perhaps a problem with something in his rig.

Appreciate responses from anyone having experiences with an 8877 going bad and what kind of symptoms it showed. Thanks. 73 Murray, K3BEQ

Two portable shortwave radios for sale --

1. Sanjean ATS-803A - $1OO, plus UPS shipping

Larger size (like Sony 2010), full-coverage (150kHz-30MHz), BFO/SSB, digital display, tuning knob, 4" speaker, FM w/ stereo on headphones, 9 memories, 24hr clock/alarm/sleep modes, runs on 6 D-cells and 2 AA-cells, comes with shoulder strap, AC power supply, box and manual. Excellent condition! Did the simple mod to eliminate chuffing - hear the DX. This radio got excellent/best-buy reviews in Passport to World Band Radio. Was also sold as the Realistic DX-440. Discontinued price was $150 ($200).

2. Sony ICF-SW-7700 (no, not the SW-77...) - $50, plus UPS shipping

Smaller, world band radio, AM/FM/LW/SW, digital, tuning knob, has large LCD showing tuning bands (like an analog radio) and also shows digital readout of frequency, includes Japanese FM band below 87 Mhz, runs on 4 AA-cells, has power and mono-earphone jacks, 24hr clock/alarm/sleep modes, 5 memories on each band, comes with nice faux-suede case and manual, no box. Very good condition. This radio makes a nice travel unit or gift for a beginning SWL. Amazingly easy and intuitive to operate.

If interested, send email to me at: ajninno@syr.edu

1228. Re: EIMAC 8877 TUBE QUESTION

Newsgroup: rec.radio.amateur.equipment
Date: 1998-11-13 00:00:00 UTC
From: Richard Carroll <dixie@townsqr.com>
Message-ID: <72hpae$a0v$0@208.207.71.169>
Source record: 126049

I doubt the trouble is weak 8877s. Most of the time when an 8877 goes, there's no question about it. I would be monitoring the grid current on the 8877's, they have a 7 watt grid disspation rating and can be easily damaged by persistant overdrive or poor loading of the output which causes high grid current. Using three 6146's at full output to drive an 8877 is too much drive. It shouldn't take more than 100 watts, but I would determine the need for drive as a factor of proper (LOW) grid current under correct loading conditions and rated output. The commercial amps I used to work on (2X-8877s GG at low VHF) most of the time had *zero* grid current displayed for 1500 watts output. I'd be looking elsewhere for the trouble. Sounds like the amp may be dropping offline and if it has grid curent protection builtin that could be why.

The loophole is that these rigs are being sold as 10 meter rigs or as
"export only" to skirt the law. Usually, they won't transmit out of the box
on the Children's Band, but the sellers usually provide (sell) the
modification info to the buyers of these rigs.

phil418@aol.com (Phil418) writes:
>Anyone know how I can run this
>radio off of 12V without constantly charging the battery, which, from what I
>always heard, will be harmful to a NiCD?

It charges at a trickle charge rate, so it's not harmful for short periods.
But if you are going to do this for long periods, you can stop the battery
from charging:

Look at the radio end of the DC power cord, where it clips onto the
bottom of the radio. There are 3 metal contacts in it. One of them
is ground, one of them provides high-current 11 V to the radio, and
one of them charges the battery. You can see what voltages are where
with a multimeter. If you can't tell the difference between the high-
current 11 V and the battery charging voltage, look at the battery pack.
The charging terminal on the cord end mates with the positive battery
terminal, while the 11 V power for the radio mates with a terminal on
the battery pack rear that "passes through" to another terminal on top
of the battery pack without actually being connected to the battery.

Once you have figured out which contact is which, just put some tape
over the battery charging contact. That will prevent charging the
battery. You can do this either in the power cord end or on the
back of the battery pack itself.

>Bob, KI8AB

I really really like the features of my VX-1R, (I mainly use my FT-50RD
for events and contacts but the vx-1r is so easy to carry around everywhere...).
I've had the VX-1R since June of this year ... it's currently at Yaesu for
service for the second time, though :(

It had to go back to Yaesu for service in September because of this problem:

Every band of radio but one was OK : I could no longer scan or step thru the
stored freqs in the 2M band - trying to scan or step thru my
stored freqs totally locked up the keys, the display had bizarre elements
turned on, the freq display often said 3F3F3F3F ... etc, etc. The radio was
so locked up I couldn't even power it off - had to remove the battery.
Soft or hard resets cleared the problem but only for about 5 minutes, then
the radio would lock up again. All other bands worked and scanned fine,
transmitting was fine, etc. Radio has not been modded in any way, has not
been dropped, etc.

Upon return the service receipt seemed to indicate a new cpu was put in,
but I can't be sure (I didn't open the radio to find out, either). All was
well until last week when the exact same problem reoccurred. So, it's back
at the Yaesu service center ... hope to get it back soon.

So, the radio has the features I want, and when it's working, it's great.
But, the second time in for the same problem?! I hope this isn't a trend.
I'm still a Yaesu supporter (the FT-50RD works without problems for me,
and I've used other Yaesu HTs in the past), so I'm not ready to call
the VX-1R a "problem child" yet.

Anyone else have this kind of problem on their VX-1R?

1238. Repair question: 2m power module replacement

Newsgroup: rec.radio.amateur.equipment
Date: 1998-11-13 00:00:00 UTC
From: "William J. Skellenger" <wjskelle@mtu.edu>
Message-ID: <72i1kq$2hb$1@campus1.mtu.edu>
Source record: 126059

Hey all,

I've got a sick FT-2200 sitting here. It's transmitting REAL, REAL weak. Over the past couple of weeks the transmit power has gone down, down, down until now -- it's almost nothing. My guess is that the power module on this rig is shot. A guy in AES's tech dept. said that the S-AV17 is a real common replacement for most 2m rigs and will probably work fine in this one. I can get one of these babies for about $60. The unit that's IN the rig, the Mitsubishi M67781L, runs about $120 according to RF Supply. (!) Yaesu said it only runs about $96 from them, but anyway -- will the S-AV17 work?

Once it's installed, what other kinds of adjustments need to be made?

Thanks in advance...

Ah, that sounds like the master reference oscillator
adjustment. I'm surprised it works at all without the
slug in the coil.

1241. Yeasu FT-100 SWR mtr ?

Newsgroup: rec.radio.amateur.equipment
Date: 1998-11-13 00:00:00 UTC
From: dlr18sh@aol.com
Message-ID: <19981113152025.02178.00001188@ng115.aol.com>
Source record: 126062

Cureous about the New FT-100 from Yeasu having a built in SWR MTR.
I know the FT-847 doesn't. The FC-20 tuner is fairly reasonable $ but I may want to see the SWR anyway. DO I have to spend more $ one a In line unit.

Also, the Advertisement from Yeasu says the radio has:
" DSP BandpassFilter,Notch Filter, Nose Reduction, and Equalizer."

Does that mean the radio has preset bandwiths for reducing QRM such as a DSP 1.8 KHZ, and 500 HZ filter. Saying "Bandpass FIlter " gives me that impression.

Thanks, Tim

He tweaks the tuning slug in the VCO until it gets back in the capture range
of the PLL. Set the radio to 445 MHz and adjust the VCO frequency until the
control voltage to the varactor reads 2.0 VDC.

Best recommendation I can make is don't limit yourself to 10 meters.
When you apps the 5 WPM code test you will have privileges in all novice
segments, not just 10 meters. This being the case, you can probably find
a very good and inexpensive used HF rig to start out with.

>less than the 8100?

The 8500 is the better radio, but it has an odd control system. All the controls are on the microphone, which has been nicknamed "Mr Potato Head" due to its large and clumsy appearance. It is one of those things that you either love or hate. I have two of them, so I obviously like it. The 8100 has a more conventional control setup and seems to sell better, so Yaesu has had to cut the price of the 8500 to keep them moving out the door. If you find you like the 8500 control system, this is a great deal. Otherwise you'll be happier with the 8100.

Source record: 126073

The SAV17 is a four terminal device. RF in, control voltage, 13.8 volt DC power, and RF out (pin 1 to 4). It is a 50 watt device and requires 400 milliwatt drive power. The control voltage is about 7.5 volts for 50 watts out and 5 volts for 5 watts out. If your set will meet these specs, the SAV17 will work. You will probably have to readjust the power setting potentiometers for both high and low power when it is replaced.

Source record: 126076

Greetings all,

I have been inactive for a number of years (was WA3HPE) and am returning to the air. Have to relearn my code and do the tests again, but the biggest problem is that I'm no longer up on what to look for in a state of the art rig. It looks like my trusty old Drake TR4 is a little beyond rescuing at this point, so I'm looking to get something new.

Do you have a FAQ list where I can find some user comments regarding the various rigs available nowadays or would any of you care to offer some comments? I'm mainly interested in 80-20m, but I have to admit to thinking about the VHF repeater/autopatch etc. scene occasionally, as well. Repeaters were just starting to become widespread (and PCs didn't exist) when I issued my last CQ. I need some help coming up to speed.

Thanks and maybe meet you on the air in a few months.

Bruce Girrell

Talk about customer service!!

That's a joke.

I recently purchased a TS440S for HF mobile.
I needed an antenna and so I didn't go by my usual Ham shop
(Norham Radio-Toronto), I know it was my fault, but Atlantic Ham
was closer at the time.

Anyhow, I bought a Valor HF whip set along with the
magnetic mount antenna base.(early in Sept)
I started to have SWR problems and RF feedback., so I
went back into the shop and was helped by a fellow.
He gave me another magnetic base to try out.
I still had the same problems. He checked it himself
so I then tried grounding the rig.
Still no good. I returned several times and was helped by the
same fellow.I even tried to ground the base of the antenna.
This still didn't work.

This went on for about a month. During this time
I even had them service the rig and no problem was
found with the rig.I spoke to several guys who had experienced the
same problems and the only way to get rid of it was to put in a
permanent HF antenna mount.

Last Friday I returned a fifth time and tried out another base mount.
It still was no good.

I returned today to return the magnetic base and in turn purchase the
hardware required for the perm mount.
The fellow asked if I still had the box. I had since thrown the box out.
(It was already open when I got it)

The fellow said that they don' take back antenna parts so he went to the
owner and asked. The owner of the shop came out and told me , no box and
that he couldn't sell this new. He told me that he would refund me the
price of the antenna
less, get ready for this one, less $20!

Yes ladies and gentlemen, $20 for a cardboard box!!

The mag base was only worth $79.
I couldn't believe my ears. I told him what kind of business was he running
and all I wanted was my $79 credit and I would buy in store for the
hardware.
He started to yell in my face.I could see that the employess were

embarassed
by his actions. No way does this person have any people skills.
He finally agreed to refund my $79 as I told him that I would never do any business there
ever. He kept in my face like a big cry baby. I turned to him and said that I'm not listening to him
and he then said, that if I didn't want to listen ,then not to refund my anything.
He stormed back to his office.Talk about baby.

The fellow who had helped me all the time looked really embarassed but I told him it
wasn't his fault and I wasn't mad at him. I thanked him for his help.

I left the store.

This is the kind of Customer service one gets, from the owner!!

And imagine this was only over a product that was worth $79.
I've heard of a 5% restocking fee, which in this case would be,say$5 roughly.
I would have been happy with this if it was that fee, but $20, come on.
$20 works out to be a 25% fee. How do you like that one?
He would just get another box and sell it for new anyways.
What a scam!! Like he was doing me a favor.

So think about this for a minute. If he argues like this over a retuned mag base worth $79, what would he argue over a product worth several times that??And what would his re-socking fee be??30%??

I've said it, and I'll say it again, I'll never buy anything ever from Atlantic Radio.
Norham Radio had always treated me well and it was my own fault that this happened.
Norham will get my business forever.

Anyone have any similar stories??

I have a very clean FT50R with 2 month old battery (MAHA NIMH), car adapter (edc5B) with box and manuals. Radio has Mars and 800 MHz receive. Radio also has the rec/playback keypad. Radio comes with orange rubber protector. The only problem is a missing battery belt clip. Add $25 and I'll throw in the speaker mike.

I have a very clean TE Systems 0550 G amplifier. The amplifier does about 360 Watts with 10 watts in. The amplifier is in great working condition. The unit uses 4 (MRF492) transistors. A couple of months ago I blew up one of the four transistors due to antenna problems. I replaced the right side symmetrical pair with a new matched pair. The amplifier is back to normal and has been used for a couple of months with no problem. I will supply the unit with a match pair of new MRF492 as spares. The amplifier sales new for $484. I will ship it anywhere in the US with the spare transistors(2) for:

$375

I have seen those too. To be specific you can find a cheap pair of them in the J. C. Whitney catalog. Might make a great 10m fm project for you rock hounds out there. Or some creative ham can build a synthesizer for it......10 meters has had some great openings here lately....Fire up those soldering irons!

I have a box of new KU Band LNB's. Input frequency is 11.7 to 12.2 GHz and output is 950-1450. Units are new in the box. The units are conservatively rated at 1.2dB NF. These are high quality units with guaranteed Noise figure performance. Most LNB's out there are rated at .7 dB, but really have 1.0++ NF. These units use a DRO module at 10.75 GHz. The module can be easily removed. I have soldered an SMA cable where the module was located to insert a different LO. With minor tuning I got them to receive great at 10 GHz.

I will sell them for $30 each or 5 for $105 including shipping. These LNB's produce perfect P5 pictures on most birds with a simple 3 foot dish antenna.

The audio is really muddy sounding in the vehicle even with an external speaker..I have mine in a 1986 toyota 4-runner with a fiberglass top which runs from the frontseats towards the rear of the truck. I used kitchen stickem type hooks and placed them all around the ceiling to hold a 50ft long wire. This worked great!!! The wire makes 5 revolutions around the ceiling of the truck. Watchout how you run your coax though. I ran mine along the passenger side of the truck and didn't know that the main engine "brain" box was located there. Lots of noise, s9+. Had to relocate the coax run from the dash to the read of the truck. On a scale of 1-10 and 10 being the best. I would say that the Icom is about a 6 on the scale for shortwave and mediumwave, and a -8 on longwave.

The PK-232, HK-232 and PK-232MBX are all serviced and upgraded by Timewave Technology. There are several options:

Upgrade PK-232 or HK-232 to PK-232MBX kit is $100
Upgrade PK-232 or HK-232 to PK-232/DSP kit is $150
Upgrade any PK-232MBX to version 7.133 (last non-DSP upgrade) is $50
Upgrade any PK-232MBX to version 7.2 (PK-232/DSP) is $125

Repairs on any PK-232 is $75. If you have an upgrade with a repair the repair is only $50.

PC PakRATT for Windows ver 2.0 is available with any upgrade for $69 ($10 off list price)

1291. FT51R - Operate on 12V w/o charging battery?

Newsgroup: rec.radio.amateur.equipment
Date: 1998-11-13 00:00:00 UTC
From: phil418@aol.com
Message-ID: <19981112231546.08921.00000863@ng32.aol.com>
Source record: 126118

Bought the FT-51R dual band HT. Very nice, but . . . my intention was to use it primarily mobile and only occasionally portable - the remote control mic is great for mobile, but I find to my dismay that the EDC12 DC adapter cannot be used without charging the NiCD battery. Anyone know how I can run this radio off of 12V without constantly charging the battery, which, from what I always heard, will be harmful to a NiCD? Seems like my only choice is to run it off the NiCD until it discharges, plug it in for 15 hours and keep repeating the cycle. Yaesu doesn't seem to have an accessory that will do this, yet I am sure that some older HTs like the FT-470 could be powered from a 12V cord without attaching a battery.

Hi!!
We are trying to instal a sarex (shuttle amateur radio experiment) station
we need recomendations on a good 2 meters radio for these, also a good
antenna. I understand we need a quad with circular polarisation so far
our choice is the cushcraft 22xb 14db gain
is there any antenna with more gain? we are willing to spend a little
more on the antenna since all the equipment is going to stay at
university we want it to last for years .

1296. Re: Get On The Bus With The ADI ValueMobile!

Newsgroup: rec.radio.amateur.equipment
Date: 1998-11-13 00:00:00 UTC
From: bdiaz@my-dejanews.com
Message-ID: <72gjer$e03$1@nnrp1.dejanews.com>
Source record: 126123

One private email I received pointed out that I may have missed what they were talking about... The ADI ValueMobile may be the under $500 HF rig for the car. We can't say for sure, but if correct AND let's assume that the rig operates very well; to me, that would be cool. Still, it's all subjective; some could care less and others would find it very exciting.

I hope that no one thinks that I was attacking Ken or ADI. Rather, having heard so many things over-hyped over so many years, I'm a bit turned off when I hear that sort of thing. (Sorry, that's just the way I am.)

Next month, ADI will tell us the big news. And yes, I am interested in knowing what it will be: (1) A Demo Van (2) Under $500 HF Rig (3) Price Cuts on some rigs (4) None of the above.

Could some find the big news exciting? VERY likely. Will most find the news exciting? It could happen. Will it be "one of the most exciting projects in the history of the amateur radio industry" ? We'll see. . . :-)

73 to all,

Bob

1303. vox & connecting problems

Newsgroup: rec.radio.amateur.equipment
Date: 1998-11-13 00:00:00 UTC
From: Stijn Jacobs <nospam.stijn.jacobs@ping.be>
Message-ID: <364C3437.70532BD7@ping.be>
Source record: 126130
Cross-posted to: rec.radio.amateur.homebrew,alt.radio.amateur.club.taparc,rec.radio.amateur.equipment

Hi,

We are doing some filming underwater.
For the sound part I use an OTS (Aquacom SSB100)
Normally this works fine.
This time we're going LIVE, so the director asked me if it
is possible to have contact with the diver trough his
tv-intercom system.
I tried to make the connection. But I still need to switch
it manually between send and receive.
There is a vox on the OTS but it is only activated after I'd

already switched to receive.
So the plug has 6 pins:
A + B = line/speaker out
C + D = Mic in
E + F = connected / short circuited (= my extra switch)
so, if E & F is not sc. I receive the diver (he has a PTT
system)
but it is impossible to transmit without E&F sc!
if I connect E & F together, I can send my signal trough the

mic in (C+D)
The vox is than activated (stops signal below -10dB)
Is there a way to connect these thing so that the vox does
the switching???

If you can help me, please reply asap; we're shooting on
sunday.
Thanks,

--
Stijn Jacobs

When moding the T8 DO NOT attempt to use it on 220....
the 220 TX is SPURIOUS like a Christmas tree and it WILL blow the
6mtr TR switch.......it WILL void your warranty.....
The problem is the PA brick is NOT made for 220 but 2mtrs...and
cannot handle the 220 signal......folks, DONT DO THIS!!!!!
EVEN if it works and doesnt blow your 6mtr side, you WILL make
some 220 ops very POed (by keying more than one rptr!) and the
antenna is NOT resonate on 220 anyway...not to mention it IS illegal
under Part 97 emission rules...

WARNING: The magnet on the element is a bulldog. Don't have a screwdriver in your hands while playing with it. It will go for the diaphram.

Look at the voice coild tie points behine the diaphram and the rear bulkhead of the assembly. I've found breakes at this point. Very hard to repair though.

You might find another mike with a bad case and use the assembly. (Frankly ecept for the looks, its still a mediocre mike by today's standards. A decent ECM does as well with the transients).

For Sale and Wanted

If anyone needs any of the old Motorola Tone (pager) Reeds, here is what I have.

TLN6709 or KLN6209. Used in the Motorola Alert Monitors..The ones with the handle on the side of the unit. I have many of these Tone Reeds. Let me know
what you need or lets trade if you have any. I need: 346.7 CZ, 524.8 GZ, 473.2
FZ, 697.5 G13

KLN6202B. Used in the Motorola Minitor Pagers. I have many MZ and GZ Tone Reeds. I need: 697.5 G13. I also have extra crystals for 154.415 to get rid
of. Let me know what you need or if you have any, lets trade.

I Need Crystals for Scanners. I have some to get rid of also. Lets work out a
trade if you have some you don't need. I need: 154.785, 154.175, 154,445, 155.325, 155.595, 155.490.

Thanks Everyone.

Put a empty FBA-14 alkaline battery case on it to run in the DC adapter.

Hi:
Is there anyone out there that has some sort of
programming software for this radio.

I know that the radio is EPROM controlled and you
need the dedicated programmer from the manufacturers
but, if you remove the EPROM only instead of the
whole board I imagine that it can be programmed
with some software especially written.

Any comments or suggestions are apreciated

Yes,
I've been down this road with Atlantic. Purchased a receiver from them
a couple of years ago. It turned out to be a nightmare experience when I
needed service. It seems that Atlantic might be ok if everything goes
well, but if something needs attention - look out. I have also warned
people to steer clear of Atlantic. Norham is much better. Buyer beware.

>
Dave: I have the FT-50R, but I think that the ADMS software is the
same. To do this, look for the "Frequency" window, with two boxes for
the Receive and Transmit frequencies. Below this there are 3
check boxes, namely Minus, Plus, and Split. If you pick Split,
you can program the transmit and receive frequencies completely
independent of one another, and only limited by frequencies that the
radio can actually transmit and receive on.

Want: HAL DS-3100ASR Terminal
with or without accessories including
the HAL disk unit.

What do you have?

What condition is it in?

Does it work?

What version of firmware does it have
installed in it (Look at screen on the
'3100 at power-up for the version
number - should probably be 3.x
or 3.xx or some such in the top
left or right hand corner)?

Do you have any manuals for it?

What do you want for it/ them/ the pile
of stuff?

What OTHER HAL stuff do
you have that you'd like to
get rid of?

Where are you located?

Thanks for your time

From: Jeff Goebel <jg-heg@rrnet.com>
Message-ID: <72kcd6$br6$1@news.rrnet.com>
Source record: 125955

I have a Kenwood Th-79ad (abt 3 yrs old). When on a QSO for about 10 mins, (long enough for the ht to warm up in your hand), the display fades and after a few more mins it disappears entirely.

After about 1/2 hr of Rx only the display returns to normal. This is with a fully charged (new) battery. It also does this with external power supply.

Has anyone experienced this? What are the probable fixes?

Tnx

Source record: 125958

I made a relay for my 706 to use with a 2M amp. I put it in a small
box with the 13 pin jack on one side and an RCA jack for the amp. You
need to use a relay that draws less than 20 mA @12VDC, and has contacts
normally open. I used RAdio Shack part 275-233. Connect the coil to
pins 3 and 8 of the 13 pin accessory jack (these are the orange and gray
wires if you use the jack Icom provided)
When you key the mic, the contacts on the relay close. Connect these to
your amp's switch. Hope this helps.

doug@nospam.dougweb.com writes:
>I use the radio with a 12V cord all the time and have seen no battery damage. If
>anything the vehicle battery doesn't charge as quickly as the quick charger. My
>batteries are a year old and still work like new.

The 12V cord charges the battery at quite a slow rate - probably what
would take 16 hours for a full charge. The batteries are intended to
be able to deal with that level of overcharge, so it won't cause any
immediate damage.

But apparently overcharging a NiCd for days at this low rate eventually
causes a chemical change in the battery material that causes voltage
depression when you finally discharge the battery. The capacity isn't
reduced, but you get less voltage out the next cycle or few.

So, if you have a choice between overcharging for a long period and
not overcharging, it's better to not overcharge.

Dave

1374. Need info. on LUKE S40 12 V DC P.S.

Newsgroup: rec.radio.amateur.equipment
Date: 1998-11-14 00:00:00 UTC
From: bredenbo@iaonline.com
Message-ID: <364de253.54454421@news.iaonline.com>
Source record: 125966

I need some circuit information on a Luke S40 12 volt DC
power supply. The supply was purchased in 1994 and has
worked flawlessly until lightning nailed it recently. The damage
is not severe, probably in the OVP chip or possibly the voltage
regulator. Unfortunately, Luke Co. (Lake City, MI) went out of
business, I believe, a year or two ago. I recall that at least one
of the owners is a ham, but I don't have his call.

I would like to get a circuit diagram, or possibly contact the former
owners for some information. It would make repairing the unit a
lot easier! I would appreciate any help I can receive, and would
of course pay for copies, mail, etc. Thank you.

The DJ-190 has two voltage detectors on the CPU board that interact with
the
CPU.

** IC2 ** sends a signal to the CPU when it detects 2.5VDC or more
attached to
the radio; initalizing the CPU and PLL circuit. This is the SET UP or
RESET
circuit.

** IC3 ** sends a signal to the CPU when the external voltage drops
below
3.5VDC and this reverts the CPU to a BACK UP state which is receive
mode.

The momentary voltage drop when some brands alkalines are used, due to
their
impedance levels in hi power, cause IC3 to send this signal to the CPU
immediately "reseting" the radio back to receive mode.

THE FIX:

Remove IC3.

Until a better device is found to replace IC3, it is recommended to just
remove this component as it serves no real function other than what is

experienced. Not having this component in the radio will NOT efffect
memory
storage / loss, cause a voltage reversal effect on NiCads, increase
emissions
of the TX/RX, or effect any normal function of the radio.

Your radio will work fine in both power modes with any alkalines after
this
modification.

WARNING: Any damaged caused while performing this modifcation may void
warranty.

Hello dr OM's

I am looking for a speaker for my Kenwood TS-930. The manual mentions
the optional speaker SP-930, but so far, I have nowhere seen any of
these. Please let me know if you or anyone you know has such a thing to
offer.
Kind Regards Roger Mï¿½der

> mbarr8it@mwc.edu

The DSP-599zx works great on SSB. The automatic hetrodyne elimination feature works completely (no tuner-uppers heard at all). The adjustable agressiveness random noise reduction is just that, adjustable, and works very well indeed (and slightly rolls off highs as you crank it up). My DSP-599zx works so well that I can copy 40m SSB in the summertime, even in the midst of thunderstorm season. The adjustable high pass and low pass knobs work really well, so I can chop out noise and taper the band pass down to about 1.3 kHz (where I start to lose intelligibility). The DSP-599zx works as well as or better than my 1.9 kHz SSB IF filter in my ICOM 706 Mk II. I even use it with the full 5 kHz bandwisth for listening to shortwave broadcasts.

Yes,
I've been down this road with Atlantic. Purchased a receiver from them
a couple of years ago. It turned out to be a nightmare experience when I
needed service. It seems that Atlantic might be ok if everything goes
well, but if something needs attention - look out. I have also warned
people to steer clear of Atlantic. Norham is much better. Buyer beware.

Dave: I have the FT-50R, but I think that the ADMS software is the
same. To do this, look for the "Frequency" window, with two boxes for
the Receive and Transmit frequencies. Below this there are 3
check boxes, namely Minus, Plus, and Split. If you pick Split,
you can program the transmit and receive frequencies completely
independent of one another, and only limited by frequencies that the
radio can actually transmit and receive on.

Had an experience along the same lines with an automatic antenna tuner
our company purchased for an insurance policyholder as part of a
"lightning claim". The tuner was supposedly damaged and wouldnt work so

after Atlantic Ham adivsed that it was "proably damaged" by lightning we allowed the purchase of a replacement tuner. The chap got it home, and it didnt work either - same symptoms as the supposedly damaged one. So the policy holder took it back and Atlantic requested a $100.00 restocking fee. Oh - the ham - who was an honest sort, found out that the problem was in the antenna base - and not a lightning situation, and still is using the original tuner.

1404. NEED: APELCO DFR 40-A Manual

Newsgroup: rec.radio.amateur.equipment

Add a Plectron or Motorola Alert
Desktop Monitor Receiver
to Your Scanner Collection

by Bob Parnass, AJ9S

[NOTE: This article may not be reproduced in whole or in
part on CDROMS, in bulletin boards, networks, or
publications which charge for service without permission of
the author.]

In the 1960s and 1970s, thousands of firemen and ambulance
squad members came to rely on their crystal controlled,
transistor Plectron and Motorola desktop monitor receivers.
They have now been replaced by battery operated portable
pagers, and the desktop models are often available at
hamfests in the $5 - $25 range. Since many are in rough
condition and need repair, a hamfest special is better
suited for hobbyists who like to fix their own radios.

Plectron and Motorola crystal controlled receivers are
excellent for dedicated monitoring of local frequencies --
a task for which you wouldn't want to tie up your 400
channel programmable scanner. They are desktop models
which can be powered from 117VAC or 12VDC with the proper
mobile cord. The audio quality of a Plectron P1, Plectron
700 series, and Motorola Alert Monitor is far better than
any consumer grade scanner and the sensitivity, image
rejection, and intermod immunity is outstanding when
aligned properly.

Models and Frequency Coverage

The Plectron and Motorola Alert monitors are single band
receivers: VHF-low, VHF-high, or UHF. No single Plectron
or Motorola Alert monitor can cover the entire 30-50 MHz
band, so there were versions optimized for each portion of
the VHF-low band. There were different versions to cover
low and high "splits" in the VHF-high band, too. For
example, low band R8000s come in 30 - 35, 35 - 39, 39 - 49,
and 49 - 54 MHz versions. There are two VHF high band

versions of the 700 and R8000: 148 - 158 and 158 - 175 MHz.

VHF-low band Motorola Alert monitors come in two splits: 30 - 42 and 42 - 54 MHz.

Although UHF versions of the 700 series were made, they are somewhat rare and coverage is limited to 470 MHz and below.

Plectron made several models with dozens of different options. Both the original P1 and later 700 series are suitable for restoration, although I prefer the newer 700 models. The 8000 series were even newer and very desireable, but they are difficult to find at hamfests. The Plectron 500 "economy" series is less desirable.

The P1 series have black cabinets with a blue-green and silver color scheme used on the front panel. They were made in the Chief (tone decoder & carrier squelch), Patrol (carrier squelch only), and Sentry (tone only) models. The Sentry models lack a carrier squelch and therefore are of little use to hobbyists except for scavenging parts. Model number and frequency information appears on a gummed label on the rear panel:

Band (MHz) Chief Patrol Sentry

_____
25-54 R19 R15 R17
148-174 R20 R16 R18
450-470 R23 R21 R22

Table 1. Plectron P1 models

The R700 series have black cabinets with brown front panels and are slightly smaller than the P1 receivers. R700s were made in the Chief (tone decoder & carrier squelch) and Patrol (carrier squelch only) models:

Band (MHz) Chief Patrol

_____
25-54 R719 R715
148-174 R720 R716
450-470 R723 R721

Table 2. Plectron 700 models

The R8000 series are much smaller than the P1 and R700 and are housed in metal cabinets of various colors. The R8000s use the same MC3357 IF/detector/squelch IC used in crystal scanners, but their crystals are not interchangeable with ordinary scanners. R8000s were made in the Chief (tone decoder & carrier squelch) and Patrol (carrier squelch only) models:

Band (MHz) Chief Patrol

30-54 R8190 R8150
148-174 R8200 R8160

Table 3. Plectron 8000 models

The Plectron FM Receiver/Recorder is a collector's item. It is essentially a 700 series Chief receiver with a built in cassette tape recorder. The recorder is carrier activated and can tape transmissions while the receiver is unattended. A connector on the rear panel allows for all kinds of remote control possibilities.

I use two Plectron P1s and four R700s in my living room, seven R700s down the basement, and several Plectrons and Alert Monitors stored in reserve. The basement Plectrons are turned on automatically when someone walks downstairs. Power to them is controlled by a modified Radio Shack Safe House infrared motion detector, originally sold as an intrusion alarm.

When a rescue squad member from Missouri advertised a number of Plectrons on USENET, I bought them -- all 20+ of them. I cleaned, fixed, and restored each one. After recrystalling them on local frequencies, I distributed them to members of my scanner club who were glad to get them.

Both brands of receiver require special crystals. I sometimes use Radio Shack's generic 3rd overtone scanner crystals in the Plectrons but they oscillate on frequencies far away from their marked frequencies. That's because the Plectron oscillator is designed to be used with a crystal which oscillates on its fundamental, not overtone, frequency.

The best source for crystals is:

International Crystal Mfg Co.
11 N. Lee Ave
Oklahoma City, OK 73102
tel. 405-236-3741, 800-725-1426

You need not bother with calculating the crystal fundamental frequency. Merely supply International with the exact receiver model number, printed on the rear label, and the frequency you want to monitor. They will perform the necessary calculations.

AC power cords for both types of receivers use unique connectors and are scarce. I published the pinout for both Plectron and Motorola Alert Monitor receivers in June 1998 Monitoring Times magazine.

You can buy the proper replacement power cords but it's much cheaper to drill a hole on the rear panel and solder on a permanent a power cord. Make sure you use a grommet in the hole to prevent the metal chassis from chafing the line cord.

Many Plectrons and Alert Monitors were equipped with an internal NiCd battery pack, intended to power the receiver if the AC power fails. It's unusual to find a used monitor receiver with the NiCd pack still capable of holding a charge. More often, the batteries have died and the series charging resistor has overheated and burned. Be sure to remove the dead batteries as they often leak.

If you find the squelch on your Plectron 700 series receiver has too much hysteresis, replace R96, a 180K resistor, with a 560K resistor. On the P1, the resistor is designated R81.

Minimum Volume Setting

Both Plectron and Motorola Alert monitor receivers are designed purposely to have a minimum volume setting which is still audible. The intent was to prevent firemen from turning the volume down completely, forgetting it was down, then missing an important call.

This "feature" was usually implemented by having a fixed value resistor in series between one end of the volume control and ground. In the R15X5, R14X5, R15X5, and R16X5, a 47 ohm resistor, designated R624, was inserted in series with the violet wire leading from the volume control.

You could decrease the lowest volume setting by decreasing the value of this fixed resistor. Alternatively, you could replace the resistor with a jumper wire to completely silence the receiver at minimum setting of the volume control.

Tone Alert Feature

I have not used the Plectron tone alerting features so I cannot address that except to say that the special coils and capacitors for the dual tone decoders vary depending on the tone frequencies and are somewhat difficult to obtain.

Repair and Replacement Parts

Repair service and replacement parts for the Plectron P1 and R700 models is offered by:

Weber Electronics
PO Box 212
5138 Laurel Ln.
Broad Run, VA 20137

telephone (540) 347-7760
email: weber@citizen.infi.net

You can also obtain Plectron repairs and parts from:

Northeast Communications
4 Oak Ridge Rd
Newfoundland NJ 07435
201-697-8804

Alert Monitor parts are available from Motorola. Phone
(800)972-3226.

Plectron SM-series Scanning Receivers

Plectron also sold an SM series of scanners, manufactured in Japan by the same folks who made Craig (division of Pioneer) scanners. The SM series are consumer-grade models and are included in this article for the sake of completeness. They are crystal controlled radios and feature priority scan and a separate trimmer capacitor for each channel to net the crystals on frequency.

Band Frequency Limits

VHF-low 30 - 50
VHF-high 150 - 174
UHF 450 - 470 MHz

Table 4. Plectron SM Model Band Limits

Model	UHF	VHF-high	VHF-low
SM-301	X	X	X
SM-302	X	X	
SM-303	X	X	
SM-304	X	X	

Table 5. Plectron SM Models

The crystals used in the SM series are quite different from the crystals used in the conventional single channel Plectron monitors. Here are the crystal formulas:

VHF low band:
crystal 3rd overtone freq = receive freq + 10.7 MHz

VHF high band:
crystal 3rd overtone freq = (receive freq - 10.7 MHz)/3

UHF band:
crystal 3rd overtone freq = (receive freq - 10.7 MHz) /
10

Other crystal specifications for the SM series are:

CR 25/U holder
3rd overtone
20 pF load capacitance
parallel resonant
max series resistance 40 ohm
max drive 2 mW

I currently have no Plectrons or Motorola Alert Monitors
for sale. I'm hoarding them. :-)

PLL RECEIVER BOARDS (50-150mHz), 50MHz Receiver, complete, plus STEREO COMPANDER SYSTEM BOARDS with 2 Channels, 80db sig/noise, & 3:1 Compression

RF SYSTEM COMPONENTS
- for Manufacturers, we offer 30,000 of these prime subsystem boards. Experimenters, and Electronics Educators. Advanced Education, Amateur Radio, and Use in other products (Remember, 30,000 available).

APPLICATIONS:
Lowest Cost RF SPECTRUM ANALYZER http://hoflink.com/~mbarlowe/
Digital Remote Controls
Audio Processing.
Computer controlled Radio
Model Airplane receivers
Frequency-agile systems
"Private" communication channels
Very private distribution systems

MODULES INCLUDE:

PLL TUNER BOARD 50-150mHz
TV (3/4) RECEIVER BOARD Complete TV Receiver
CRYSTAL CONTROLLED FSK RECEIVER BOARD (50.675MHz)
STEREO EXPANDER BOARD 3:1, 80db s/n, Expander with Receiver
POWER SUPPLY 120/60Hz to 5, 12, 22 VDC, Regulated.

DOCUMENTATION:
Schematics and general theory supplied. Easily understood by any ham or tech familiar with general electronics and RF
circuits. We suggest access to a library of RF and Audio IC Data Books for general reference.

GENERAL COMMENTS:
As a set of modules, this is unique in several respects. First, the level of engineering is quite high. These modules WORK !
All highly engineered and proven succcessful, functioning modules manufactured for and specified to work in commercial
cable and wireless applications. Second, there is a large quantity (abut 30,000) available to manufacturers of specialized
products. You can design these in, and we will hold quantities and release against your manufacturing schedule of up to a
year on prepaid deposits. Summary descriptions of each module are below, but your best bet is to purchase a sample
evaluation kit described at the bottom of the page. With this, you can see

the quality, evaluate hou they all function together,
and test designs or prepare electronic circuit desig class notes. If you
are an educator, these systems are remarkably
inexpensive tutoring tools for lab work. Whatever your choice, Good Luck!
We're here to help.

MODULE 1)

PHASE LOCKED LOOP TUNER BOARD, including MITSUMI TUNER MODULE MODULE and
DIGITAL PLL CIRCUIT
** EXCELLENT DIGITAL TUNED PLL TUNER SYSTEM** $12.95, or 250 for $9.95/ea
If you need a clean, stable 50-150mHz PLL tuner,
if you want to build an "agile tuning" system, this is a chance to save
your dollars:
RF FREQUENCY 50MHz-150MHz (Extended VHF TV Range),
IF FREQUENCY 10.7 MHz
VARACTOR TUNER MODULE Mitsumi 407-A26-5J52
FREQUENCY DIVIDER SP8660
PLL FREQUENCY Synthesizer MC145155
MICROPROCESSOR Z-8
EPROM 2716
EEPROM NMC9306
SUPPLY VOLTAGES = +5VDC, +15VDC,
+22VDC(nil current - varactor tuning)
MECHANICAL DIMENSIONS 7"x 2.2"x 1" high

MODULE 2)

TV RECEIVER (chan 3 or 4) BOARD: $ 7.95, or 250 for $4.95/ea
RF FREQUENCY Ch3 / Ch4
INTEGRATED CIRCUITS UPC1366
TA7303
14046B
OTHER COMPONENTS Many transistors and tuning components
FILTERS 4.5MHz ceramic filter
SUPPLY VOLTAGE 15VDC
MECHANICAL DIMENSIONS 4.6"x 2"x 1" high

MODULE 3)

FSK DATA RECEIVER, CRYSTAL CONTROLLED (50.675MHz) $9.95
RF FREQUENCY US TV Channel 1 (50.675MHz Crystal Controlled)
IF FREQUENCY 10.7MHz
INTEGRATED CIRCUITS TA7303 FM Sound
LM393 Comparator
TA7358 TV Front End
FILTERS Dual 10.7MHz Crystal
SUPPLY VOLTAGES +5, +15VDC
MECHANICAL DIMENSIONS 4.7"x 2.2"x 1" high

MODULE 4)
STEREO FM RECEIVER + AUDIO EXPANDER 3:1 (90db s/n) $16.95, or 500 for $6.95/ea

2 Channels, 80db sig/noise, & 3:1 Compression
INTEGRATED CIRCUITS LM3189 (2)
4558 (4)
NE570N (4)
LF353 (4)
MECHANICAL DIMENSIONS 6.3" x 4.8" x 1.25" high

MODULE 5)

RF SPLITTER / ISOLATOR / AMPLIFIER $5.95
FUNCTIONS Dual Lo Noise RF Preamps (well engineered)
bandpass filters, and
dual LN RF amplifiers.
SUPPLY VOLTAGES +15VDC
MECHANICAL DIMENSIONS 3.5"x2"x1"
ENCLOSURE Completely enclosed "can"
COMMENTS - Users say that this is a solid, well engineered
preamp and splitter for general use.

MODULE 6

FRONT PANEL DISPLAY: Dual 7-Segment LED Readouts $ 2.95
LED DISPLAYS, 74HC164 Mux Drivers,
Encoder Switch for Chan Selecting.

MODULE 7

DC REGULATED POWER SUPPLY: $ 3.95
MECHANICAL DIMENSIONS 5"x 2.7"x 2" high, plus
2"x"3"x3" Transformer
INPUT 120VAC
OUTPUTS +22VDC, +15VDC, +5VDC

Order your sample set today:
All 7 modules, a more than $40 value, with all documentation, for $29.95.
Shipping weight = 8 lbs.

Date: 1998-11-14 00:00:00 UTC
From: teenham@aol.com
Message-ID: <19981113210656.26557.00000759@ng-fc1.aol.com>
Source record: 126017

Hello there. I am looking to trade all of the below equipment plus cash for the original ICOM 706 (MK1). The ICOM 706 has been my "dream rig" ever since it came out in 1995, but since I'm only 15 I haven't been able to afford a unit. I am hoping to upgrade soon so I can take advantage of HF (I'm a no-code Tech now.) Anyway, here's the equipment I have:

1. ICOM W32A Dual Band HT/Scanner combo. Currently ICOM's top of the line full power HT. Dual VFOs with two frequency readouts at same time, digital S-meter for each, (you can listen to 2 freqs at same time) 5 watts output, 200 memory channels, Alphanumeric Tags, PL Encode/Decode/Scan (scan is VERY handy!) , full DTMF Keypad, DTMF memories, battery voltage readout, Backlit LCD and Keypad, ICOM BP-180 battery (very good condition). Also rubber duck antenna, the optional DC power cord, and the optional RadioShack Speaker/Mic, ICOM BC-110A charger, and of coarse the manual. I'll also throw in the optional center loaded coil telescopic portable Radio Shack antenna which you can replace with the rubber duck when needed. Wide 108-999 MHz receiver (except 200-300 MHz and Cellular.) Transmit 140-150 MHz and 440-450 MHz (MARS/CAP done, but you can also enable 118-195 MHz TX on the VHF side and 420-510 MHz on UHF with another mod, info included, with a .JPG of the mod,) plus DOS and WINDOWS programming software and schematic of the simple OPC-478 cable you can build for PC programming of the W32A. As an added bonus, the radio also has the manual already programmed into the ROM of the unit, you simply hold down the GUIDE button and then press any key or go into any mode and you get a full explanation of that function scroll across the bottom of the LCD screen (EXTREMELY handy when traveling!!!) Small size for a 5 watt unit, only 2 1/4(W) x 5 13/32(H) x 1 5/16(D) in. Serial number 03375. Everything in very good condition and works great. I checked in my HRO catalog and it lists the price of this unit as $409

2. Realistic HTX-100 10 meter SSB/CW mobile. Unit tunes 26-30 MHz and puts out 25 watts (5 on low.) 10 memory channels, RIT, RF Gain, Noise Blanker, etc. Has one small problem, the volume control doesn't seem to function which means no matter where you turn the VOLUME knob, it stays the same (at a pretty comfortable base station level, but too weak for mobile usage.) I simply hook it up to a cheap pair or RadioShack amplified speakers and works great. This has absolutely no affect on the performance of the rig. I was told this can be easily fixed, but I don't have the tools to do that. I can also get the schematic for this radio (so can easily fix the audio), and I do have the manual. Unit comes complete with microphone (with freq/channel up/down buttons) and power cord. Serial number 95004545. These units go for around $120 used.

3. Grundig YB-400 Shortwave Receiver with SSB. LW, MW, SW (1.700-30 MHz) plus stereo FM (with headphones.) LIKE NEW!! Has BFO for sideband reception, WIDE/NARROW filter for LW, MW, and HF. Unit has 40 memories, sleep timer, two

clocks, variable freq steps, backlight LCD display, PLL frequency readout and S-meter readout. Have the original box, all the manuals, and SW stations book, plus a 20 foot Grundig long wire "wind-up" antenna Will also throw in a RS "cube" power supply for the unit. Serial number 355962. Radio is like new. BestBuy store price: $169

4. RadioShack TRC-496 Full Featured AM Mobile CB. 40 channels AM, 10 WX channels, digital RF Gain and Mic Gain (buttons, not knobs), programmable memory channels, Scan mode, Clear Channel Scan, NB/ANL, Instant Ch 9/19 button, PA function, Mic with channel up/down buttons, very nice Amber LCD Data Bank Readout. Excellent condition with mounting hardware, power cord, manual, and mic holder. This unit has almost everything you would want in a AM CB rig. Serial Number 65004694. RadioShack catalog price: $119

Well, there you go. All these radios plus cash (how much cash you want?) for a used ICOM 706. Doesn't need to have any accessories, a "bare-bones" unit is fine as long as it is in decent condition and works good. With the new ICOM 706 MK2 Version G coming out, the original 706 is dropping in price... so I figure now is a good time to try to get the older version. If you have any questions, or an offer, please email me at the below address. Thanks alot!

Anyone know if GemTronics is still in business? I've just found
a marine-band VHF transceiver (model GT-25) in a campus dumpster
(a warm thanks to the Department of Geophysics for tossing out
such nice gear - they've kept me well stocked over the years).
I'll attempt to power this unit up tonight.

Briefly (for triangulation:)

Three receivers with directional antennas in three different locations. For each receiver, take signal readings as you rotate the antenna. Record the bearing for the strongest signal. After obtaining all three bearings, plot lines on map. Where the lines intersect is the approximate signal source location...

Both Icom and Yaesu have NEW mini HF-440 mobile rigs due out soon. Any knowledge about which is best?

Any info on the Yaesu Atlas 100 antenna?

73,

Jim

Hi Tim.... Do you know what is the difference between the two tuners?
They both are listed at around $275. A pretty good value to be able
to get one of these FREE! I'm awaiting my 847 :-)

If the display reads a different frequency (vice just drifting and reading the same) it sounds like you need to try the dial lock, or tighten the dial lever. It does not take much for the VFO to move if the knob tension is set to loose.

1423. Free ft-50's

Newsgroup: rec.radio.amateur.equipment
Date: 1998-11-14 00:00:00 UTC
From: hackercentral@my-dejanews.com
Message-ID: <72j9r8nal1@nnrp1.dejanews.com>
Source record: 126030

Hello! I recently ordered the ADMS-1D package from an online hamradio house. My radio is a Yaesu FT-50 with the hi-power batt and ftt-12. It had the 'freeband' mod done on it (I use it to tx into a dummy load to test business band radios) Anyway, i got the ADMS-1D package, but I don't know the difference between -1D and the ADMS-1C. Should I send back the 1D and get the 1C? Is the 1D newer? Is it any better? Will it interfere with my freeband modification? Is it any more or less "stable" and likely to screw up the radio's memory? (
Theres a big warning sticker on this disk that says:

"WARNING: Care should be taken to prevent interruption of the cloning process while data is being transferred to the radio. This interruption may cause damage to the main processor of the radio. Such damage may not be covered under warantee."

Pretty ominous, huh?
While I'm at it, I was wondering if theres anything I should know about using this package (either one) from anyone out there who has tried it. I keep hearing stories of radios doing wierd things under the control of ADMS.
Thanks for any help anyone out there can provide!

I answer:

The FC-20 is a traditional antenna tuner such as would be found in
most modern ham transceivers. The ATAS 100 is a compact screwdriver
antenna which is tuned by the FT-847. I have one of these and it
works very well on all bands from 40 meters up to 440 MHz. You mount
this on top of your car or truck and hook it to the FT-847. Then,
when you press the TUNE button on the 847, the ATAS-100 moves up and
down until it's resonant.

1425. ts680s + 6m 140W amp f/t

Hi,
I am looking for an IC275H or equiv. in trade for my ts680s with 6m
10/140W amp.
This is the 160M-10M 100W and 6M 10W transciever. The TE brick brings 6M
up to 140W out and adds a GaAsFET rx amp. I prefer a trade to selling
the station and would consider one of the Kenwood or Icom VHF/UHF rigs.
Thanks,
Art k9xf@yahoo.com

Hi

I have for sale an ICOM IC207 2m/70cm transceiver.

It is as new condition, in that it is fully working and there is not a mark on it. It is complete with Mic, cable's Box etc. and I am looking for just ï¿½285 for it.

This set has have very little use as It was purchased for it's 9k6 packet capability which I have now stopped using.

You can contact me on email or on my mobile 0976 935746.

73's CUL.. Mark. (G1INU)

Rob Pectol:

Really! Just a suggestion, just an observation. Your "observation" IS an accusation and quite frankly I think I can accuse you of being an ignorant ass with a lot more accuracy! How do you come off suggesting what other people should do with their property. Frankly your suggestion is stupid! Why would I take new plugs and solder them up for my rig, just to check what is almost certain a new TNC? Rob Pectol, I am not interested in your opinions or suggestions and am highly insulted by your accusation that I might be hiding something.

The unit is exactly as advertised. I bought it from the original owner, did not try it but would certainly stand behind it. It looks new and to the best of my knowledge has never been used since it was purchased. Exactly what my post said. Since I am offering it at only 2/3 of what you can buy it for in a store, if I were looking for one now, I would consider it a deal!

I would be glad to furnish references should anyone doubt that I would be anything but upfont on my offerings.

1441. New FCC enforcement effort? Nope!

Newsgroup: rec.radio.amateur.equipment
Date: 1998-11-15 00:00:00 UTC
From: ear-wax <ear@wax.org>
Message-ID: <lUz32.13536$el4.22946681@c01read02.service.talkway.com>
Source record: 125798

For those of you (including the ARRL) who think the FCC
is on some kind of new enforcement kick, save your
breath. Here's the real reason why this NJ fella got
busted:

I must admit, the guys on the net who were being QRM'ed
had an ingenious idea. They had tried very unsuccessfully
for months to bring their plea of interference to the FCC.
But of course, to no avail. Instead, they went to the
RADIO STATION the QRM'er was re-broadcasting! The RADIO
STATION's attoney's went to the FCC and told them to do
something....or else! So the FCC buckled!

Sorry folks! No new enforcement around the horizon!
Especially in regards to 14.313 or 3.950. The FCC feels
it's best to have a couple of frequencies like this, to
keep the nuts away from the rest of the band. It's
been their policy to just leave these frequencies alone
and sacrifice a couple of kilohertz of bandwidth for
sake of the rest.

I remember those. I don't know of a dedicated radio like that manufactured today but you can of course by a shortwave receiver for as little as $80 or so. Used radios at yardsales and certain chinese models can be had for around $20. Also, this company makes clocks (and wristwatches!) that callibrate themselves automatically to the WWV radio signals: http://www.synctime.com/

You may also try this link, if you just need to know the time: http://tycho.usno.navy.mil/what.html

You *may* be able to find a kit for a dedicated WWV radio...no better way to search than the Internet.

Great little amp! Much higher construction quality then other amps in
the price class. I have had mine for 8 months now and the only complaint
I have is the slightly high fan noise. It's no problem with the amp
tucked away in the operating position on my desk.

I run mine on 220...80 watts in ...650 watts out.

Hello
I recently aquired a bunch of boatanchors from a
ham who is 78 yrs old and is getting out while he can.
The equipment has not been on in about 7 yrs but
most he says was working when last tried/used.
This guy is one of the pioneers in 432/1296 and
is a real nice fella!

anyway the equipment as follows

SA25 Vectron microwave spectrum analyser <X BAND>
National VHF TUQ transmitter <rx?> I have no idea but
it is definatly heavy, and works..
HP model 500a freq counter 0-200 mc
Phazor Phasemeter model 200 asi
FR6/U Freq meter us signal corps 100-500mc
FR5/U Freq meter us signal corps 10-100mc
High pass filter Geotech model 1501
T217 gr/r27gr/md125agr reciever and transmitter
for 200-399 mc AM military/Faa was at the Lubbock
Faa tower
Audio sig generator hp model 205 ac
random noise generator type 822ar Scott inc
Crystal impedence meter model Ts330/TSM checks the
quality <how strong the crystal is> of a crystal
AN/UPM-8 radar test set
HEATHKIT model HX-30 6 meter SSB/CW/AM xmitter only
no mike <has a 1 connector mike plug added> with spare final
and manual
about 6 8 ft tall military/faa standard racks.
2 6 ft tall military/faa standard racks

I am definatly open to whatever resonable offers for any
or all of this equipment I could ship, but some of this is
so heavy that it would have to be trucked <expensive!!!>
I will deliver approx 200 miles with gas money <don't worry
my GMC pickup gets 26mpg HIHI>

make any resonable offer to
kevin
km5rt@ticnet.com <OR>
km5rt@juno.com <OR>
you could call

1467. ICOM IC-756 S METER HELP WANTED

Newsgroup: rec.radio.amateur.equipment
Date: 1998-11-15 00:00:00 UTC
From: Jim Roik <jnroik@escape.ca>
Message-ID: <364F1A60.6BA3AC1C@escape.ca>
Source record: 125824

I recently purchased an IC-756 transceiver and its S-meter seems to
behave

strangely. Checking the sensitivity I git
s9= -72dbm about right for 50 microvolts
s8= -78.5
s7= -83.5
s6= -87.5
s5= -91
s4= -93
s3= -95
s2= -96
s1= -95

Using the standard of 6db per s unit I would have expected s1 = -118dbm.
What

this shows up as is very little movement of the s meter at low signal
levels.

Either the signal is s1 or s5 with little inbetween.

The sensitivity is ok with the minimum signal I can hear by ear about
-135 dbm.

Anyone have any similar experiences or comments. Or do I have to send
the

transceiver back?

Jim

1468. Re: Yaesu FT-736R 1.2 GHz problem-help!

Thanks for the suggestion but none of this improved things!

I will have to take it to a dealer as I have run out of time to try
and fix it.

Thanks to all for their help.

It's not normal. TenTec rigs are noted for being great sounding CW rigs.
I would check the power supply first. Watch the voltage with key up and
key down. If there is a large change there may be a regulation problem,
or you may need a bigger supply.

Hi and thanks for reading this. The name is John and I
have the following For Sale or Trade;

6 Mtr. All mode, Kenwood TS-600 with desk mike and
manual.

2 Mtr. All Mode, Yaesu FT-225RD with desk mike,
memory unit and manual.

Yaesu FT-208R 2 Mtr portable with desk charger, wall
charger, spkr-mike, manual and a fairly new battery.

Kenwood TR7800 2 Mtr 25 Watt mobile with mounting
bracket and manual.

CIR Astro 200 80-10 all solid state HF digital transceiver
100 Watt with AC power supply, hand mike and manual.

TPL 450 Mhz. brick, 25-40 W in for 70-100 W out. Model
PA6-1FE covers 400-512 Mhz.

two (2) GE Phoenix-SX mobiles one on VHF and one on UHF.
Both are 16 channel, dual priority, programmable with
the hand programmer, all manuals and thick frequency
program book, mikes, ext. spkrs and mounting brackets.

KLM Echo 70 432 SSB/CW 10W PEP with ac power supply,
hand mike and manual.

two (2) UHF portables one GE MPR 2 channel 5 Watt, ext
spkr-mike and desk top charger. Note battery no good.
one Maxon 4 channel 5 watt, ext spkr-mike and desk top
charger with fairly new battery.

I would be interested in trading for;

Mirage 2516G 2 mtr. Linear
R6000/R7000 HF vertical
HF mobile ant. (Comet or Hustler)
440 Mhz or Dual Bander mobile
220 Mhz mobile
Pent.II Computer or/CPU & Motherboard

or will sell for a reasonable offer on any item. Please
give John a call at 520-868-1337 (Arizona).

The following items are for sale:

HAPN Packet adapter - Internal TNC, plugs into 8 bit slot
inside PC - includes lots of software, complete documentation,
cables, etc. Software for BBS also included. $ 80

I found some "patch panels" as used for RTTY, etc. These are the
standard 1/4 inch jacks, and are new. Each panel is about 8 inches long.
I have some with 20 positions and some with 40. The 40 position have
two 20 position, one on top of the other.
20 position for $5; 40 position for $10.

Wattmeters
Tempo RBF-1 A - dual meters for SWR and Power $ 50
Akigawa APM-1 H Peak reading, or average reading $ 100
Micronta SWR bridge and field strength meter $ 18

Prices do not include shipping from Florida.

Butch....is your port activated in the setup? Can you talk to the 232
at all, or see data going to it with a breakout device? Also, be sure
your cable is right for the connection.

Source record: 125843

The folowing is equipment for sale from the estate of K3GOX-SK
I was excepting bids on the equipment and was swamped with over 100 emails a day and i
have no way to sort all of them, sorry.I promiss u that all the equipment listed here works
and is in good to verry good condition. Since their are so many bidders, i have formulated
a suggested used price for everything. Remember the previous owners request was that
when he died was the funds from this to go to charity..People have been upset at the way
things have been done, but this is not an easy job. So for thoes greedy hams that hunt the
internet looking for the deal of a lifetime, STOP RIGHT HERE and dont read on ! There
are aolt of nice hams out there and a lot of lids that want to ruin it for everyone else.....
thanks

SP600JX14 Hammarlund general coverage receiver, being sold as is. This radio is complete, has good cosmetics allround, and is running on all bands. The bfo is not working, and the AC switch is broken. It appears to have been recapped. The loggings scale is unique - it is calibrated in amateur band frequencies instead of 0 - 100. Looks like a factory mod.

Price is $185.00 plus foam in place packing costs of $20.00 and shipping.

Rob:

>That just goes to show you that you can't give some people ANY
criticism
>without them thinking you are "out to get them!"

I never said you were out to get me. How do you consistently misinterpret what people say? I invite you to show me where I said that. I am angry because I was accused of being dishonest in a public forum by someone who doesn't know me, hasn't seen the equipment and has no knowledge of it. Please tell me also why you think it is your responsibility to criticize anyone! Who the hell do you think you are? This TNC doesn't belong to you and I don't think the rules say that I need to ask Rob Pectol for his approval on the wording of my post prior to posting it!

>Like I said, I wasn't trying to accuse you of anything.

And yes, you did say that you weren't trying to accuse me of anything. That was right after you accused me of trying to hide something!!! I guess you are one of those guys who goes around insulting people and covers by saying "I was just kidding".

>I'm sure there were others out on the newsgroup here who felt the same
way about your
>posting.

By what rule do you assume to know how others feel about something. Actually you accused me of hiding something and that certainly is the farthest thing from actual truth, so here you go assuming something else! I doubt there were many others who thought what you thought. My posting was clear, was truthful regarding the unit, and left little doubt as to what I was selling and it's condition. Hasn't your tendency to assume things and shoot off your mouth caused you problems elsewhere in your life?

> I just thought you might like to know how your posting comes
across.

I seriously doubt that. I personally think that you get some sort of charge out of letting the world know how smart you are. If you really wanted ME to know how my posting came across, you would have emailed me with your feelings and frankly I would have responded quite differently than I did when accused of being less than honest in a public forum!

And what about how your posting comes across? Here you suggest that I take a new TNC out of the box and test it so I can be sure that I am not passing on a "lemon" I did get one good laugh out of your post and that was it. Do you

go to the store and open the saltines before you buy a box to see if they are stale? How about opening all of the boxes to check them so no one else gets stale saltines too? Me thinks your stupid ass would land in jail!

Just a small piece of advice to you. Use your head prior to offering your kind of criticism to any one else. The next guy you tackle might be an attorney that takes your comments as libel and sues your ass. He may win and he may not but you will live a holy hell (and an expensive one too) trying to defend yourself from his attack in a court of law.

How 'bout those digital table clocks sold everywhere, (except I haven't seen it in Radio Shack), that have the WWV receiver built in and autocorrects the clock. You cannot hear WWV, but it MUST be able to get that data stream sent at what, 100 baud? Mebbe an amp could be added and the audio extracted.
I have even seen them in Service Merch, and Brookstone.

1496. Implementation of Gel-Cells as Emergency/Temporary Power

Newsgroup: rec.radio.amateur.equipment
Date: 1998-11-15 00:00:00 UTC
From: tvsjr <tvsjr@sprynet.com>
Message-ID: <72ocidhfc1@juliana.sprynet.com>
Source record: 125853

Greetings all-

I'm hoping someone can alleviate my concern regarding Gel-cells. Currently, I keep 16Ah (over 20 hours) of gel-cell power online at all times, wired in series across the power supply. However, I always remove the power when using high-current devices, because I am concerned about the power being pulled across the batteries. Can I damage the gel-cells by pulling 20+ amps across them? I, of course, don't pull that kind of power when the mains are out, but I want to ensure that I don't damage the gel-cells in normal operating conditions.

Also, I feel that 16Ah is somewhat inadequate- it's only a quasi-temporary measure for now. I would like to get something in the 100-200Ah range. In Dallas, we don't commonly have multiple-day outages, so solar charging and other more elaborate setups are not required, but I would like to be prepared. Does anyone have any recommendations on brands/sizes/wiring designs and where to find them *cheap*? (relatively speaking, of course).

Thanks for any information!
Terry

I'm a french amateur radio and i read all messages writen on this forum.
Joseph is wrong when he write this message about wine here.
every one drinks what he like. You, american men, prefer cocacola but we,
french men, prefer wine. the difference is in the cork. french bottle are more
soft when we take it off.
let me tell you that touraine wine is not a good wine. it's that we call "
PIQUETTE "
in phonetic, you tell pe: ket

I think that the better think to do if someone of you wants to buy good wine,
you contact another OM by packet, mail or on the 20 meter band. go on quickly
because Christmass day is soon ...

Hi:
Is there anyone out there that has some sort of
programming software for this radio.

I know that the radio is EPROM controlled and you
need the dedicated programmer from the manufacturers
but, if you remove the EPROM only instead of the
whole board I imagine that it can be programmed
with some software especially written.

Any comments or suggestions are apreciated

NO only EBP-33/34/35/36 batteries will work. Take a look at the DJ-191T
for about the price of a battery ($40 - $60 more) you'll get the same basic
radio but with a full illuminated kepad, a BATTERY, and a drop in charger all
included.

1520. Help - Problem with Kenwood TM-742A

Newsgroup: rec.radio.amateur.equipment
Date: 1998-11-16 00:00:00 UTC
From: Ricky <REMOVE-THIS-JUNKricky-ponder@geocities.com>
Message-ID: <3650CCB5.396BAAE@geocities.com>
Source record: 125696

Hello,

I have a Kenwood TM-742A that I have had for several years. It worked fine up until about a year ago the 2 meter module lost power output. I sent it back to Kenwood and they repaired the "APC". Which consisted of a transistor, capacitor and ceramic filter. About 5 dollars worth of parts, $50 labor. Last week I noticed that my 2 meter power was dropping out completely, then about 5 minutes it would come back. I hooked a power meter to it and come to find out, it's stuck in high power output, no matter what setting you have it on. LOW-MEDIUM-HIGH all put out about 45 watts. If I talk on it for a while with keydowns of less than 3 minutes, power output will drop out, then after about 5 minutes it will come back and be full output again. Has anyone experienced this problem with their TM-742A or have any idea what the problem could be? I'm wondering it it might be this same "APC" circuit konking out again. Any help would be appreciated.

Thanks,
Ricky

>offer an opinion that would be even better :)

Jerry, I have used both of them side by side, and own a 920, but I would have the 1000MP if the funds would dictate so.

For the money, the 920 does an admirable job, with the DSP and only one filter. You have a choice of either a 400hz or 250 hz. The on-board keyer works pretty decent, as does the MP's. But, the 920 does have a 4 position memory keyer and will increment serial numbers in a contest.

The MP's receiver does appear to be a little more sensitive (To my ears), with a little less noise floor hiss. With the MP, you have a choice of 500, 400, or 250 hz cw filters. Also, the MP has dual in-band receive, which the 920 only has dual VFO's. International Radio has a nice mod for the MP which lowers the noise floor even more with their IF amp kit.

If money was no object, it would be the MP hands down. If you are watching your money, the 920 would do just fine (There is about $1,000 difference in retail price - but I'm sure you know that).

Good luck,
Bob - KF9YH

Howdy From Helena, Montana KA7YAO - I have the following Character Generator for Sale for use with ATV fast scan:

Quanta Microgen
9 pages for overlays
Does Crawls, Rolls (variable speeds) basic graphics,
10 color selections for messages
Preview output to preview monitor before sending to video output
Battery back up (new batteries)

Nice unit that really adds to ATV with all of its features and you can add pages as you go and switch between the 9 pages and edit while its putting out graphics to the ATV signal.

This was a commercial unit from local TV station and not sure what its worth, so make me an offer and we can work something out.

Dear Geo,
I think $50 is a good buy but $250 is way too high. You should check see if the band switch rubber band is O.K. as it is the first thing to go bad. You can find used but good 6KD6 at below $20. So don't worry about it. There are substitute tubes available, too. Good luck to you. FYI, I bought good working unit for $60 about a year ago but the rubeer band was bad.
de K6hm

>

Thanks for your reply Joe. I am posting my reply to you to stimulate some discussion:

I've pretty much decided on getting the Yaesu because of its extended receive range. It receives from 110 - 550 mhz and 750 -1300 mhz (the Icom won't even receive in the 460 mhz area which is used in my local area for several police frequencies). I played with the Yaesu it at HRO for about an hour and it appears great . I am told the Yaesu is the closest thing to being both a high speed scanner and a ham radio. It also has a scan feature called Smart Scan. This will automatically find active frequencies and program them into a special 50 slot memory bank for active frequencies. This would be great when travelling and coming to an area where you are unfamiliar with existing repeaters and usage.

The Icom on the other hand has totally separate controls for each band - no need to switch to a band to change frequency. I am told the Icom has a bit more remote features when being used as a cross-band repeater (allowing changing of frequency on the Icom from a remote radio).

I've been soldering wires to untabbed NiCd cells for at least 15 years
and have never seen any unusual effects, heat-related or otherwise.
In fact, I never considered that there should be any problems!

I lightly sand or scrape the area to which I want to attach a wire,
daub some flux on it, and solder it.

Source record: 125713

macgruff@my-dejanews.com writes:
>Could someone enlighten me with regards to how the FT-50 RD monitors the sub-
>band. Does it just show activity,with no audio?

Depends on how you set it up. In Dual Watch mode, it normally listens
on the main band, but checks the sub-band every 200 ms. If it hears
a carrier there, it switches to the subband for the duration of the carrier
and you hear the audio normally.

But if there are simultaneous conversations on both frequencies, you
hear only whichever one the FT-50 found first.

>also can you program
>UHF/VHF into memory then scan them.

Yes, you can program any frequencies (that the unit covers) into the
available memories in any order, and it will scan through the memories.
You can also set a couple of lower bound/upper bound frequency pairs
and scan all frequencies in between, using your choice of step size.

>I am considering buying one, aI don't
>need simultaneous receive but it would be nice if the radio can be prgrammed
>similar to that of a scanner.

It makes a usable scanner if 100 channels is adequate for you, and you
don't need features like "scan for active frequencies and store them
in memory". It's not as sophisticated as a real scanner. It's also
engineered to perform well in and near the ham bands only. The 800 MHz
receiver works, but is not comparable to a good receiver designed for
that band.

Finally, if you get the ADMS-1 programming software, it's relatively
easy to have a radio with "multiple personalities". One day you can
upload all of the ham repeaters in your area to use it as an HT,
another day you can upload all of the frequencies you like to monitor
and use it as a scanner. Each "personality" can use up to 100 memories,
and it only takes a few seconds to upload a different one.

There is apparently another difference that may be significant: Icom says that the 2710 has "four receivers". I take that to mean that the left and right side of the radio each have both UHF and VHF VCOs. This means you can tune either band on either side of the radio with no compromises.

On the other hand, if the FT-8100 is like the FT-51, there are a few compromises in V+V and U+U reception. Each side of the radio is optimized for one band, either VHF or UHF, with only one VCO. It is possible to listen to VHF on the UHF "side" of the radio, because there is a tap off the VHF front end that connects across to the UHF mixer, and a divide-by-4 circuit that divides the UHF VCO down to a frequency suitable for VHF reception. Similarly, the VHF side can listen to UHF by tapping RF off the UHF front end and using the third harmonic of the VHF VCO.

But the sensitivity may be lower on the "wrong" band for that side of the radio, and you may not have a full set of step sizes available. If you listen to AM VHF aircraft frequencies, the AM demodulator is probably only available on the VHF side of the radio.

For normal use, with VHF on one side and UHF on the other, there is no loss of performance, so this may not matter to you at all. But it seems like Icom tried to set the 2710 up as two complete, symmetric dual-band radios in one box, where it makes no difference at all which frequency is in which display.

All of this is from reading literature, and looking at FT-51 schematics. I don't have either the 8100 or the 2710.

Kenwood TH-79 Amateur Radio. Perfect condition, with original box and manual. Includes everything that came with it new (Battery Pack, Charger, etc.), and AA Battery pack. Asking $275. Purchased less than a year ago for around $450. I no longer have a use for this radio, as I have purchased a mobile unit. Shipped priority same-day I recieve your money-order or when personal check clears. Will consider trade for working Uniden MT-8100 or similar (no longer produced scanner, made primarily for police/fire dept. use).

Thanks,

Ali, KE6YCJ

I got a similar deal at a garage sale, for a FL2100B amp, (but not quite that cheap). You likely will need to replace the large power supply filter capacitors, as they often go bad when the unit doesn't get used. My unit blew fuses, so I did that replacement and it works now. Still can get the caps from Yaesu. Kim WN5I

Why would someone "broadcast" religious rhetoric using CW ?
He certainly couldn't expect to reach a sizable audience.
Is it perhaps some sort of code practice (a W1AW wannabe) ?

Need cash for The Holidays? Read on :)
Hi :) I'm an electronic musician seriously searching for old SYNTHESIZERS,

KEYBOARDS, drum machines, analog sequencers, vocoders, unusual old

effects and all related electronic musical equipment (MIDI and pre-MIDI).

In general, I'm looking for working or broken instruments made in the

late 60's, 70's and early to mid 80's. Machines with KNOBS, SLIDERS and

especially ~PATCHCABLES~. The more unusual, the better.

Message-ID: <72pg0n$hh3$1@nnrp1.dejanews.com>
Source record: 125754

Hello all,

I'm searching for someone who owns the TS-570SG willing to spend a few minutes to mail their experiences, dislikes, likes, performance ratings etc etc etc on this radio before I splash the cash. Also seeing the prices of the ft-847 and ic-746 fall as quick as they are and approach the price of the TS-570 SG I wonder if its worth going for the 570 at all ? Maybe the performance of the 570sg blows the 847 and 746 on HF away ???? Any users out there can help me out here ?

Cheers a bunch

Jonathan

There's a local ham who gets jammed frequently on one of the 2m
repeaters. He lives probably 40 miles from town, so pretty much
anybody in town with an H/T can jam him.

He has a pair of 2m beams, separated by maybe 50 ft. Claims he's been
able to use those two antennas to triangulate the exact location of
the jammer - even had one of the local kids (a new ham) looking for
the jammer in a mall parking lot one day... Needless to say, the kid
never found the jammer...

Source record: 125776

Do yourself a big, big favor, and purchase a high-quality sealed thrust bearing from a local shop in the area with a flange-type mounting. You can purchase them with collars graduated in 1/16-inch increment inside diameters.
I replaced a Rohn TB-4 bearing (for 3" mast) about 4 years ago. My Rohn bearing used aluminum bearing races and steel bearings. After a few years
of the antenna sitting predominantly in one position, and rocking back and
forth in the wind, the bearing wore 'divots' into the races. After awhile
the rotor had a terrible time rotating. The high-quality comercial bearing
was about $110 4 years ago. It is somewhat sealed against weather.

This bearing has a grease-fitting (zerk fitting), and I climb the tower twice
a year and fill it up with grease as my XYL rotates the antenna through 360
degrees. It has been problem-free to date. You can cover it with sheet of
silicone rubber to help keep the weather out if you live in a place with frequent
rain and freezes.

1584. Kenwood TS-450S Radio

Newsgroup: rec.radio.amateur.equipment
Date: 1998-11-16 00:00:00 UTC
From: back2boom@aol.com
Message-ID: <19981116152602.06981.00000199@ng-fi1.aol.com>
Source record: 125779

Hello,
I was wondering if someone could help me. I recently acquired a Kenwood TS-450S Radio, and she sure is nice looking. I also own a Yaesu 757GX HF Radio as well (it needs some severe service).
I am noticing some differences between the two now. One difference was that my Kenwood wouldnt xmit on various bands of the radio, whereas my Yaesu had continuous xmit from 530khz to 29999MHz. This functionality for the Kenwood has been restored at thie time by removing Diode#D27, however this unit STILL won't xmit between 550khz and 1742khz.
While inside the radio, I noticed D21 (not recommended to remove), however I also noticed D26.... Does ANYONE know what D26 is used for??? Does it block xmit capabilities on the frequencies described above? I feel comfortable working on the radio (did the first mod last nite) but I would like some feedback about removing a diode (D26) for which I have no documentation.
Thanks in advance for any one who can help me on this.

Marc

Cross-posted to: rec.radio.swap,rec.radio.amateur.equipment

It's time to buy a new rig, and I need some help in choosing between a Yaesu 920 and a Yaesu 1000MP. As to what the radio will be used for: I work a LOT of cw (very little SSB), and enjoy working contests and dx - so good cw capabilities and a great receiver is mandatory.

If I could get some opinions on which of the two radios is best for my needs, that would be great...if you've actually USED both rigs, and can offer an opinion that would be even better :)

Please reply in the news group.

Thanks.

Jerry

Brand New Portable Antenna Analyzers for sale.

Active VSWR meter giving direct readings of both VSWR and % reflected RF power.
It is designed to check the exact resonent freq. of any antenna, HF, VHF & UHF.
It has a 4 digit freq. counter and an analogue meter, with a switch for 2 freq.
ranges and 2 knobs for freq. adjustments, Fine & Coarse.
It has major advantages over a standard VSWR meter in that it sees the antenna
system exactly as the Transmitter sees it, plus the frequency is swept to see
where its resonating. Makes trimming so much quicker and easier !

As much as I think HF has pretty much gone to hell in a handbasket, the stuff I copy on 7101 in the SF Bay Area CA seems to be just straight from the Bible, and since it is broadcast at varying speeds and repetitions, given the benefit of the doubt it counts as a legitimate code practice broadcast. It even identifies itself (W6-something as far as I recall.)

Of course every wacko can thus legally broadcast their own personal manifesto under the guise of a morse practice session. Not that that would ever happen, of course, oh no.

Terry,

Here in Southern Calif. I've found a fantastic source of really really
inexpensive, large capacity, high surge current gell cells. The people
who supply and service industrial alarm systems and battery backed up
medical monitoring equipment. They replace the batteries, which have
had a year of trickle charging, every year. Thay sell them off for the
price that they could get from the metal recovery yards, by the pound.
I buy 37 AH 12V cells for $5. They all work perfectly with full capacity.

I has been my experience, that the FCC is either way too busy, out of money or given up.
Even when I have written to the Deputy Chief, nothing happens.I know were several two-way radio commercial guys are trunking on top of other licenses and no one cares, I know where Chadwick, 800 MHz provider, is using channels too close to the mexican border and no one cares, I know where people are transmitting way over the licensed ERPs and no one cares, I know where commercial sellers are using GMRS frequencies for commercial business use and no one cares, I know I have personally tracked down interference and after the FCC drone 75 miles and confirmed it, nothing was done, I know my ex-partner moved a 5-channel 800 SMR and put it back up without FCC approval and the FCC did nothing, etc, etc, etc......

Sorry guys

But I have to agree with the group of people that say the FCC isn't doing much of anything to eliminate interference and or control the frequencies.

I personnaly think they don't have the staff and money.

Everyone I talk to at the FCC trys to help you, they just seen to have their hands tied

>
>Jim

That sounds about the same as my IC756. I tested it with an HP 606A.
On all bands 50 microvolts yielded S9 +- [illegible] S units which I thought was
very good. On ten meters:

50 uv S 9
25 uv S 7.5
10 uv S 5.5
5 uv S 3
3.6 uv S 1

50 uv +10 dB S9 +8 dB
+20 dB S9 +15 dB
+30 dB S9 +22 dB
+40 dB S9 +32 dB
+50 dB S9 +47 dB
+60 dB S9 +58 dB

All in all much better than I expected given S meter's reputation for
only giving approximations to signal levels. Converting my
measurements to the same units you used shows about the same
compression below S 5. I believe this is reasonable given that most S
meters just read the ALC voltage which is very non-linear. I wouldn't
send it back.

Another example is the person broadcasting religious rhetoric using cw
on 7101 Khz. There is no qso, only a violation.

Please add the Emtron 3000DX (Kenwood TL-922 clone) to the list of rare ones. I have been all over and have yet to find more than one Ham who has heard of it and none who has a manual or schematic! :-(

I guess we must both be persistent and someone will hear of our needs and respond!

I am selling a Radio Shack Pro-2037 Tripple conversion, 200 channel +800Mhz base/mobile scanner.
Tripple conversion means less intermod than most other scanners.
Has switchable attenuator, am/fm selectable, hyperscan and many more features.
This scanner is Like New condition.
Covers the following frequencies: 30-54Mhz, 118-174Mhz, 380-512Mhz
806-824Mhz, 849-869Mhz, 894-960Mhz

Selling for $140 (Includes Shipping and Handling)
Acceptable PrePayment in the form of a Postal Money Order

Hmmm.... interesting idea! Actually this makes some sense, now
if I could just find a cheap one to experiment with or better
yet it seems that I have seen plans on how to build a cheap
WWV receiver. Does anyone know where I might be able to find
plans for this type of project? One of my first experiences
with radio was when my dad brought home an old shortwave
radio he had salvaged from someones junk pile. I can remember
sitting there listening to the time signals and just being
totally amazed. I think that a project like this might be a
fun one for my son and I to build together.

Source record: 125876

I use a kenwood dsp-100 with my ts-850

It does very very little on receive
Just like having a narrow ssb filter in Your rig

Where it really shines is during TRANSMIT

On cw it makes Your dits and dots look really perfect on the scope
whether anyone can tell the difference over the air is another story
You can choose the attack and decay time of Your CW waveform

On SSB when used with good microphone the dsp-100 can make You sound like
professional
HI-FI broadcast station
It really extends the tx freq response
or allows You to shape it (hi pass or low pass adjustable) Cleans up the tx
audio and adds richness to it etc...

On Am it actually makes the TS-850 useable
as far as tx audio quality

As a nowelty it alows you to transmit
in the carrier supressed double sideband mode (not much practical use)

the dsp 100 's are very hard to find these days
they were sold originally for abt $500
If you can find one expect to pay good couple of hundred $$

Andy

1616. WTB: Yaesu FTS-17A CTCSS decode board for the FT-2400/2500H

I Just purchased a Yaesu FL-2100 at a garage sale today. How can I pass up a $50.00 item. I have the book and it tells me it has "2" 572B tubes. I will be driving it with a Yaesu FT-920. What can I expect for a reasonable output from this linear? Claims a plate voltage of 2400 Volts, set up for 220 volts AC. PLate input per the specification is 1200 watts PEP, 1000 watts CW and 600 watts AM. Thanks in advance for your help. Any hints or recommendations based on personal experience is always appreciated! On last thing, how robust are the 572B Tubes???

I have a Heathkit SB-200, it also uses two 572B's and has 2400 volts.
The real RF output is about 600 watts. The DC input to the 572B's
is about 1000W to 1200W. 572B tubes work great. I have re worked 4
SB-200's now, I change the bleeder resistors from 30K to 200K and
change the filter caps from 125UF to 470UF (450V). I like it because
when wired for 120VAC it draws less than 15 amps and wont blow a 15A circuit
breaker. I see the Yaesu FL-2100 selling for $350 to $500. You got a great
deal!

To avoid SPAM I changed the first letter of my
e-mail address, It should be r not j.

Oops, sorry, I was thinking about the PA-10 mobil power adapter which
does work with a FBA-14 since it uses only the little ears to hold it,
not the grooves. What is an EDC-12 then, my accessory sheet doesn't
list it?

>list it?

Perhaps it's something Yaesu added later. It's basically a power
cord that plugs into the cigarette lighter. There's some active
circuitry in the lighter plug end that provides noise filtering and
drops the voltage to 11 V or so. The other end of the cable has
a clip that fits over the bottom end of the battery pack, providing
both operating power for the radio and trickle charge for the battery.

But there is no mechanical support for the radio - you continue to use it
handheld. And there's no cooling fan.

Bob,

I've had my Yaesu for only a few weeks and I don't have any hardware problems. As far as other people, I've read alot of messages in reference to the VX-1R, and this is the only hardware related problem I have heard about. In general though, manufacturers will sometimes put out a bad batch due to equipment problems and so forth. Lemons do occur....

I'll keep everyone posted tho.

Marty,

I enjoyed your story, thanks for relaying that to us. I think that it would be nearly impossible for someone to locate a roving jammer who is operating at different powers, only transmitting occasionally, etc.

I've seen some of the direction finding(fox hunting) games that local hams play, but honestly - unless it's a stationary transmitter transmitting regularly, pretty darn hard to find someone like that.

I recently made a challenge(read $$$ bet) with a local ham group where I would drive around, transmit periodically on a FRS radio at one watt, and if they found me, I paid them - and if they couldnt by the end of a specified time period, they paid me.

Even with their years of DF experience and gear, none of them seemed confident in their ability to pinpoint something like that.

Thanks again for the story.

Hi gang,

I've included my Icom 22S in my auctions on eBay. Check it out.

Also, don't forget my Yaesu FT-101ZD (FT-901 clone) station with speaker/phone patch, tuner and Shure microphone. All you need is a piece of wire and a ground and you're on the air! This station is COMPLETE with manuals for all but the mike.

Brian,

I'm just purchasing an SGC230. My understanding is that the smartlock is for mobile use mainly where due to flexing of the antenna or hitting an obstruction, etc. the tuner will attempt to retune. It apparently DOES work as it's supposed to.

If you end up having to buy the smart lock or just want to ask sometbody who sells the 230 and the smart lock, I've found a fellow who has bought out Henry Radio's SGC stock and his prices are below everybody else. You might want to e-mail him. You should be able to click on this link to automatically enter his address. I know how difficult it is for non-sighted to read many of the graphics busy Internet pages. I have a friend who has just started using Windows and that's bad enough for his page reading software and he works for a company that makes the stuff!

RFpower@radiodan.com

Best of luck!

Ian, K6SDE

>The "popular" 2 meter and 440 HT's run FM, and you want one that runs AM
>too?
>Bet you won't like the cost IF you can find one!

In fact, many of the modern 2M and dual-band mobile and handheld transceivers provide AM reception on 118-136 MHz. Just check the spec sheets. On the other hand, 220-400 MHz reception is rarer.

>Especially if you want
>it to Transmit in those other bands ... will require the unit to be
>"type accepted" which will add some more to the cost!

Now that's a problem. I know of no HT or mobile that will transmit FM in the ham bands and AM in the air bands, regardless of whether it's type accepted or not. Transmitters are FM only.

> >

Folks,

I have an FL-2000b amplifier which is simply an older version of the same thing. I think that if you change 572B's from Cetron to any other brand (particularly Svetlana), you'll have to do the 'bias mod'. This raises the idle bias from -18v to around -36v and lowers the idle current from 90 ma to 30 ma. I've done this mod on mine when I put in Svetlana tubes last month. It's a good amp! Expect 600 watts on most bands except 10m. With older tubes, you'll get 300 or so watts output there. With new tubes, 500 watts is normal on 10m. I didn't have to change filter caps, even though the rig is over 20 years old. The bias mod is simple on paper and inexpensive ($4.95 from HRO for the kit) but there are definitely some problems finding the correct wires in the harnesses. Contact me directly for suggestions and things that I discovered about doing the mod.

Source record: 125561

Jeff,
This is not unusual in the TH79. Especially earlier models. My TH79E showed the same symptoms after about 18 months, but only occured from time to time. The info from my local dealer is that the flex foil strip from the LCD to PCB can need re-seated. I took mine apart to do this but the foil & connector is incredibly small! (I am used to handling small electronic parts at work, but decided I would live with the problem when I saw how fiddly it would be).
I now give the rig a couple of slaps with a finger (bottom RH edge of display) and this usually rectifies the problem.

It has never got bad enough for me to send it off for repair and I'll probably get it looked at when something else goes wrong. However the TH79 is so reliable that this is the only problem I've had in about 4 years of daily heavy use.

I'm trying to locate a 2SC2329(k) transistor for a TR-2400 Kenwood 2 meter handheld transceiver. I've had no luck at all and was wondering if anyone here could be of help. My son just got his ham license and a fellow at work gave me this thing and this is all I need to get it fixed for my son.

Thanks

Garrett Fulton

Dual "watch" is simply a term meaning it will "scan" between the two, but it wont simul at the same time. The Yaesu FT-51R, Alinco DJ-G5T, kenwood TH-79& ADI -AT-600 will simul.

1660. Drake SW4a VFO has drifted off by about 200kHz

Newsgroup: rec.radio.amateur.equipment
Date: 1998-11-17 00:00:00 UTC
From: ishort@pcm.co.za
Message-ID: <72s1tu$or3$1@nnrp01.iafrica.com>

Hi All

As I posted yesterday, I aquired a Drake SW4a. After a bit of Kontact-60 on the switches and the crystal sockets all the bands are working now, but the calibration is a bit off.

Further investigation revealed that the VFO is running between 4.75MHz and 5.37MHz.It's supposed to go from 4.9 to 5.5MHz.

I'm checking things out with a HP8601A generator and a HP5382A frequency counter which, while not recently calibrated, agree with my Sony ICF SW7600 which agrees with all the radio stations.

I have a copy of the manual, and looking at the VFO section reveals that a couple of the caps, C95 and C96 are factory selected. 3.3pf and 7pf.

Does anyone know this receiver intimately? Can they give any hints and tips?

I imagine that the types of components I use to replace anything in the VFO will be quite critical as it has to be very stable etc.

If necessary I can scan in the schematic of this section of the circuit. It's completely self contained and in a metal can.

Funnily enough, although I have checked only the 455kHz IF alignment, it is absolutely spot on.

Cheerio, and thanks in advance.

Did you try Radio Shack? They have an extensive cross reference manual,
and will probably have to order it. You'll pay a bit more, but
convienience costs...

This months Practical Wireless in the UK has an article by a proponent of the crossed field theory as put forward by Hately and others, but interestingly proposes using two delta loops, one horizontally and one vertically with Hately`s phasing unit. He has done some practical tests and states that this array has some gain over a conventionally phased array.
Well worth a look.

1678. Re: FT-50RD QUESTION

Newsgroup: rec.radio.amateur.equipment
Date: 1998-11-17 00:00:00 UTC
From: deforger@aol.com
Message-ID: <19981117124549.16643.00000107@ng142.aol.com>
Source record: 125670

The FT 50 will monitor two bands but not a the same time.For example if you are on a VHF frequency and would like to know if a UHF frequency becomes active, the dual watch would switch it to the UHF to let you know .If you want to hear both at the same time you need something like the FT51.
Yes, it will scan mixed frequencies in the memories.
I have been happy with my FT50. It was a choice between the 50 & 51. The FT51 is a bigger radio and has more features,but i felt i would not use them. The one thing the 51 has that I wish the 50 had was the large display and lighted keypad.
Good luck on your choice.

Robert

Source record: 125671

I just changed the lamp in an FTV-107R and yes the lamp is in the meter. It was an odd sausage shape, but that just makes for a real even light, and didn't stop me though. Perhaps I'm too cheap, but I refused to buy a new one, so I raided my junk box and pulled out an older pager that just so happened to have a couple of wheat lamps in it. True, they were 1.5 volt in the pager, but I just used a current limiter resister, (1/8 watt, surface mount, whatever), inside the meter so they, tied in series, ran on the 8 volts. The meter was not glued together, just something like two pieces of scotch tape. Was a very easy job. I even thought of using some of the mini 6 or 12 volt xmas lamps I keep around for just that thing, but I was too lazy to strip the red paint off. That would have been my second resort. Just position the lamps so any aberation in the glass doesn't throw any uneven light on the backplane. If the replacement lamp(s) are high enough in brightnesss, use a piece of tissue paper for diffusion. It cannot be seen once it has been reassembled without some contortions. There MIGHT be a piece of foil paper around the meter's rim. Put it back. It helps a little to reflect the light back in for a more even diffusion.

Hope all works out.

Jerry,

You can read my comment on my FT-920 at :
http://www.wm7d.net/hamradio/920/comments/af4bh.html
So I can save some bandwidth here.

I don't have the luck to use the FT-1000MP extensively enough but I do have something to say about the FT-920's build in electronic keyer.

The FT-920's electronic keyer will generate dit and dah, that's a given. But if you want more keying features, the FT-920 will not satisfy you. I am used to the Curtis Mode A keying method and the build-in keyer won't do that. I'll start to have mental blocks beyond 15wpm in QSK mode, so I do non-QSK 99.9% of the time. But up to that speed, QSK is very smooth and never have any complains.

There are 2 (two) keyer inputs on the FT-920. The rear input on my rig is restricted to QSK only, even you've set the rig to be semi-breakin. I don't know if this is an undocumented feature or a bug. But the front input jack yields correct behavior. I can live with that.

I recommend the INRAD 400Hz CW filter. The YAESU 500Hz doesn't seem to be as sharp. On a crowded afternoon, that little bit makes a big different!!

The "CW center tune" display is very cool, but it shares the part of the display with other functionalities. I guess it's the same for the FT-1000MP. Toggling the display is a pain on the FT-920 because you have to go to the build-in menu to do just that.

Since you are a CW'er, I presume that you already have an external keying device of your choice. My guess is that you probably want to keep that even you decide to buy the FT-920 that has a build-in electronic keyer.

Don't mind if I am too negative about my FT-920. I like it a lot and will keep it for a long time. I just wanted to mention some of these operating experience so others can put that into consideration when they think of the FT-920. With my FT-920, I have managed to make many CW contacts with European and African stations on 40M at night. I am also working toward my WAZ and WAS award, too! I guess that sums up the performance of my FT-920.

Best 73!

Hello!

I'm looking for information about the market price for an old Stoner SSB-100A transceiver, as I should do an offer to the owner. It is non-working, dirty, has some small scratches but it seems complete and restorable to an 8+. There is no PS. So, how much is this set worth (if anything!)?.

Thanks!

:-)

Seriously, in Denver there is someone who sells these batteries at
hamfests. I got an 80aH gel-cell for $30.

With respect to charging conditions, the label on the top of mine
had the maximum float charge voltage stamped on it (14.1). Mine
are solar charged, however, so I got a charge controller specifically
designed for gel-cells.

Hi- I have a Drake TR5 which is in excellent condition with the matching power supply. The radio does not have a scratch, the supply has a small few. I have the original box for the supply, I have the original manual. The radio has the 250 Hz CW filter and fan. I would like to swap this station on a Ten Tec Corsair II. 73 de Dave

1687. Reliable ICOM R7100 repair

Newsgroup: rec.radio.amateur.equipment
Date: 1998-11-17 00:00:00 UTC
From: "Eric F. Richards" <efricha@flatland.dimensional.com>
Message-ID: <K7m42.109$iK1.624@wormhole.dimensional.com>
Source record: 125679
Cross-posted to: rec.radio.amateur.equipment,rec.radio.scanner

Greetings, all...

I have something of a problem. I belong to a group which operates two large parabolic dishes for educational and research purposes. We are quite poor... This weekend our ICOM R7100 turned a routine balloon-tracking exercise into a disaster with some strange behavior, probably in the 1st IF. I'm looking for someone capable and trustworthy to check it out.

There's only one problem. This is a continuous coverage 7100, which makes it ideal for use with downconverters from microwave regions. The blocked 7100 versions are somewhat draconian in that they block all of 800-900 MHz. We'd like -- if possible -- to avoid getting a blocked receiver back from ICOM (which would be the natural choice to inspect/fix the receiver). (We'd also like donations of R8500's -- even blocked -- or surplus commercial gear to replace it, but I digress...;-))

So... what are other people's experiences with ICOM -- do they return "pre-blocked" receivers with "blocks?" What about independent operators?

As I said above, we are quite poor -- meet our money sinks. One has a 400MHz feed, the other has no feed mounted.

http://www.dimensional.com/~rcraig/dses/images/

Thanks in advance!

Eric, KB0YDN

> agree with Myron!

***** I've done it for decades also. I scratch the surfaces with
emory cloth first and then use the iron to
"scrape" solder into the surface. As soon as I get a bead,
I stop and let it cool. Then, I can quickly attach a tinned
lead without much heat since I only melt the top of the
solder bead..... Seems to work well.....

Since I don't have a way to check the integrity of the
seals, I can't dispute it. But it does not degrade them
enough to make any difference to my projects.....I get
several years of life out of even "used" nicads...

For Trade:
Kenwood TS-530S digital HF transceiver.
160-10 meters including WARC bands.
I have original owners manual and boxes.
In really nice condition working perfect
on all bands. No scratches on front panel
except a few small ones on the plexiglass.
(You can see through those).

Would like to trade for a excellent condition
Drake B-line. (R4-B, T4X-B, MS4, AC-4)
Must be working perfect with all 10M crystals.
Must included manuals.

email me (Mark) at: crslex@iglou.com

I found I had to modify the interface, as the IC-Q7 uses a 3 volt rail and the interface seems to be made to run into a 5 volt system. I placed a LED between d2 and r4 in the interface. See http://www.hamradio.cz/rigs/scanners/R10/csr10.htm for the circuit...

I have a Radio Shack Digital Atomic Clock 63-970. Guess what? It's the
same one that Brookstone and others sell for more money. However, it
receives a signal that is below the AM broadcast band. There is no audio to
listen to. I thoroughly enjoy my clock - it was well worth the investment.

Could someone enlighten me with regards to how the FT-50 RD monitors the sub-band. Does it just show activity,with no audio? also can you program UHF/VHF into memory then scan them. I am considering buying one, aI don't need simultaneous receive but it would be nice if the radio can be prgrammed similar to that of a scanner.

The new clocks are receiving data only on 60 khz.
The WWV clock that Heath used to sell is a WWV only receiver that
scan three of WWVs frequencies, (5, 10, 15 Mhz) and chooses which ever
one is currently stronger.

This was a beautiful station accessory!

MFJ should scrap some of them garbage tuners, and friggin' keyers and
sell something like that!!!

Message-ID: <vV742.6831$Pk4.3151173@news.inreach.com>
Source record: 125739

I went with the Icom instead. I like the fact that you don't have to push the band button just to change a function. After completing the mod it will receive 118 to 174 and from 320 to 479 and also 849 to 950 minus cellular, everything thing I listen to is with in that frequency range. I had the Yaesu FT-8500 and liked the radio a lot but got tired of using the Mr.Potato. The Icom 2710 will also let you control the radio functions from the mic or from the radio, so you can have the best of both world. The mic controls the following functions: Volume, Squelch, memory channels, direct frequency entry, scanning, repeater shift, tones, tone search, power output, one touch DTMF dial, and mute. About the only thing you can't do is turn the radio on or off from the mic. It also has 2 user programmable buttons. The extension kit for the Yaesu is much better and cheaper. It comes with a mount that lets you attach the cable to and the control panel snaps on to the mount, letting you take the control panel on and off without having to mess with the extension cable or any screws. The Icom isn't even a real kit, you have to purchase everything separately, mic, speaker, and display cables. Save some money and get a LAN cable and an adapter for the mic extension, about $6 compared to Icoms $70. The data cable for the Icom is $90 AND you don't even get the software, thats another $11 and it's DOS. Yaesu clearly wins that one.

1720. IC-735, distorded receive audio

Newsgroup: rec.radio.amateur.equipment
Date: 1998-11-18 00:00:00 UTC
From: Kenneth Klimasewski <n1kk@postoffice.worldnet.att.net>
Message-ID: <36535029.75E2@postoffice.worldnet.att.net>
Source record: 125493

My Ic-735 has developed a receive audio problem. The audio is distored
and at max level it is very low. If you shut off the power then turn
it back on the audio will come up to normal volume for its control
setting but it will still be distored/raspy. After a couple seconds the
level of the audio will drop to a low level.
The same for the front "PHONES" jack.

Any help would be appreciated.

thanks,

Ken, N1KK

1733. Optoelectronics Xplorer

Newsgroup: rec.radio.amateur.equipment
Date: 1998-11-18 00:00:00 UTC
From: Jim <kd6dx@yahoo.com>
Message-ID: <7303ja$is1$1@news.ncal.verio.com>
Source record: 125506

I just purchased a new Optoelectronics Xplorer near field test
receiver which they say sweeps through the entire frequency
band from 30MHz to 2GHz in less than 1 second.

So far it does exactly what they say it does.

I bought it for transmitter hunting (foxhunting), close-in transmitters,
say within a few hundred feet. I will be testing it this weekend and
let everyone know what I find out.

Is there anyone else out there that owns or plans on owning an
Optoelectronics Xplorer?

What other things can this Xplorer do, or what do other Xplorer
user do with their Xplorer?

From: Jake <jake@trib.com>
Message-ID: <72vm20$n9o$1@hearst.trib.com>
Source record: 125511

Hi,

Just got off the Unofficial VX-R1 site and I'm impressed.

I've had 3 VX-1R's now. The first quit scanning just days
after recieving it. The second didn't recieve FM Broadcast
properly and the 3rd seems to be working OK. I was not
impressed with the salesmen at AES who told me many differen't
'stories' as to why the first two didn't work.

Anyhow, since there is so much that can be done through the keyboard
and with software, I thought I would ask if anyone knew of any other
keyboard or software mods or unwritten information. Since the squelch
can be settup using the keypad, what else can be accessed? It almost
looks to me like I could have repaired the first scan problem by
doing something other than a reset using the keypad. It sounds like
entire radio can be set up using the keypad or software. (I'm not
talking about the ADMS software either).

Anyone have any information on this?

You get back what you send.

None of the service facilities has time to mess with crap like blocked
or unblocked. There are no restrictions on owning full coverage
receivers, just selling them new or importing them.

The R7100 has some known problems with bad FETs in the VCO. It is a
nasty repair. There are two bad ones that sooner or later will fail in
most R7100s especially if they are racked and stacked generating heat.
It was a design problem which ICOM knew about but never rectified.

We have replacement better spec FETs in stock, have experience with
maybe 100 of these receivers and can service the thing. Email me
direct if interested.

R7100 was not all that wonderful of a receiver. R7000 was better,
R8500 is much better.

Regards ..... Steve

Hank,
I have the Titan and about the only thing I can say is Ten-Tec makes great equipment and they care about you after the sale. I have had a few questions and calling them has always been a pleasure. It's more like talking to a family member than a company.
Good luck with your purchase, you cant go wrong.

1747. sgc230 smart tuner angst

Newsgroup: rec.radio.amateur.equipment
Date: 1998-11-18 00:00:00 UTC
From: btew@nyx.nyx.net
Message-ID: <911351780.744065@iris.nyx.net>
Source record: 125570

To anybody who's used an sgc230 smart tuner on cw:

My sgc230 smart tuner isn't!

Specifically, it won't stay tuned. I xmit cw almost
exclusively. When I hit the key, the tuner starts tuning again.
I'm blind, so I was hoping this thing would handle tuning.
I just found out sgc sells a "smartlock" which promises to make the tuner
do what it was supposed to do--for a small fee, of course.

Is this a common problem for this tuner?
Does the smartlock do what it's supposed to?

Thank you.

Brian Tew <btew@nyx.net>

1749. RFI Problem

Newsgroup: rec.radio.amateur.equipment
Date: 1998-11-18 00:00:00 UTC
From: Tom Branch <k4nr@earthlink.net>
Message-ID: <01be129f$5f572800$4bae1b26@default>
Source record: 125572
Cross-posted to: rec.radio.amateur.antenna,rec.radio.amateur.equipment

Greetings,

I blew the fuse on the meter side of my Hygain CDE 45-II. It's the small 1/8 amp fuse. Seems when I use my amplifier on 80 meters I get RF coming back down the line (I've noted it on 40 and 160 meters as well). The meter swings back and forth in step with my CW! Apparently I'm getting enough to blow the protective fuse on the meter. Can I use some small caps between the wires (pins 3 and 7) for the metering circuit and ground to bleed off the RF? The metering circuit has a single diode, filter network, and a zener diode (as a regulator) to produce DC.

Is this a reasonable idea to cure the problem? If so what size cap? If not, maybe I can choke it out with some beads at the control box input....

1756. Help ???? ICOM EX-1514 VOX Question?????

Newsgroup: rec.radio.amateur.equipment
Date: 1998-11-18 00:00:00 UTC
From: jleikhim@nettally.com
Message-ID: <36525d10.819917@news2.nettally.com>
Source record: 125579

Hi I have an IC-970A, an IC575H and a newly acquired (NIB) EX-1514
vox.
When I hook up the vox to either rig with either an SM-20 desk mike or
an HM-12 hand mike, nothing happens aside from the green light
lighting
up on the vox. The mikes will key the radio normally, but with
pressing
the PTT, the mike(s) cause the red light on the EX-1514 to light and
the transmitter to key. Otherwise no vox action. Am I right in
assuming
that these mikes do not have an active mike element unless the PTT
button is pressed?

You would assume that the vox unit would break the normall PTT line in
that event when switched on to vox mode.

What am I doing wrong?

The "popular" 2 meter and 440 HT's run FM, and you want one that runs AM
too?
Bet you won't like the cost IF you can find one! Especially if you want
it to Transmit in those other bands ... will require the unit to be
"type accepted" which will add some more to the cost!

Hello again

I had a very useful reply by email from az0th - he suggested that I have a mechanical problem, and he's right.

If I use a small screwdriver to move a spring loaded end stop thingy out of the way I can tune the VFO up to way over 5.5MHz. There's plenty of range.

However, to fic this properly at would appear that I need to unsolder the three wires going to the VFO, remove it from the chassis, pull a couple of gears off the front which are help on with insanely tight circlips, get the dial in the right place, re-assemble, and re-fit.

Am I right?

Please tell me there is an easier way, and also, is there any better way than educated trial and error for getting everything back in the right place?

BTW, I email R L Drake who said they still support this model! That's really good for a product introduced 30 years ago! Unfortunately they say the average repair time is 2 hours and it costs US$22.00 per 15 mins. Plus shipping.

Oh well, when I'm rich and living in the 'States......

Tom you are on the right track.
There was an article in QST some time within the last year about RF getting into the rotor itself and burning or pitting the variable resistor that indicates direction. the writer was having intermittant indications from the rotor and after cleaning the pot several times found that it was RF doing it and he installed beads on all leads going into the rotor. My bet is that the same beads installed also at the Control box end would clean up your problem.
I wish I could tell you what issue??
good luck

>end quote

well if the people who made it can fix it why go somewhere else and risk having someone destroy it? that rate per 15 minutes is the ONLY complaint i have heard about rl drake repair tech services. i just hope like hell if my r-4a ever goes down they will take a look at it and hopefully still have enough parts after 32 years to fix it :))
overall beats the pants off a few other companies i can think of off hand that say sorry it we can't fix it:)
my suggestion for what it's worth ? have drake send you a service manual and with that they will show how to take that vfo apart safely and have it actually work right when it's put back together..
even on my r-4a instruction manual it has complete schematics and alignment instructions for entire radio if rf and af circuits :))!!!!
how many other companies offer that in a owners manual?
could go on and on bout your sw4 and rl drake in general but last word is they have never made a piece of junk in 40 someodd years...
a loyal drake r-4a owner

Hello again!

I'm glad to report that I've fixed it!

If the SW4A is anything to go by I'll definately back Chris's opinion of Drake - its really well engineered.

After much gloomy pondering and peering into the depths of the SW4A I suddenly noticed that the shaft that the nylon gear ran on had a spring on it.

Why, I thought, and borrowed a torch, and saw that the shaft could be moved out of the way to allow me to adjust everything all I want!

Again, just telling someone about the problem has helped solve it.

Hope I haven't wasted anyone's time....

Chris said:

It is really amazing! I have friends who work in hospitals who are really fed of because their really expensive CT-Scanner or whatever is only 5 years old and not year 2000 compatible. The company that made it is still around, and won't give them a fix for it. Millions worth of perfectly good equipment scrapped for no good reason.

My only reservation about sending my SW4a to the manufacturer was that I was lucky enough to buy the radio for only US$26.00 and I live 6000 miles away on the other side of the Atlantic Ocean.

>my suggestion for what it's worth ? have drake send you a service manual
>and with that they will show how to take that vfo apart safely and have
>it actually work right when it's put back together..

Luckily enough a manual came with the radio, but the section on the VFO only said:
"The permeability tuned VFO was carefully adjusted at the factory and no further alignment should be attempted. Should a constant error occur across the band etc etc etc...., the tuning dial may be repositoned on its shaft to return the unit to proper calibration."

I only spotted the adustability of the clear plastic dial - not the rest of it. As they say, "Live and learn"

Thanks again all who helped, and for making these news groups such a friendly place.

I have an sgc230 smart tuner. Although I have not tried CW. I work ssb
which should be as bad. Once tuned, the tuner will not retune unless the
frequency changes or the SWR changes.

However the manual say something about an option to have it tuned at each
transmission. If you did not buy it new, maybe it was modified by the
previous owner, Otherwise, contact SGC.

Source record: 125598

I just passed my Tech Plus exam, and I'm currently looking for my first rig.
Most rigs are either too expensive or too complicated for a beginner ham like me.
I'm thinking of just getting a HT, maybe a dual-bander. I have done some researching
on QST magazines, newsgroups and web-sites. But the more I know about what's
available out there, the more confused I get. Does anybody know about a site where HTs
are rated/review to certain degree (similar to what the Deutch's page did to SW radios)?
Any insight/recommendation from your favorite HT is also highly welcomed.

Thanks in advance,
Hendra

That's good advice-- if the radio is off by a constant amount across the dial, it's almost never an electronic problem, almost always something mechanical has slipped.

1790. Re: Your favorite HT

Newsgroup: rec.radio.amateur.equipment
Date: 1998-11-18 00:00:00 UTC
From: mjgilbert@wcom.net
Message-ID: <3652e7f6.7007806@news.compuserve.com>
Source record: 125613

I suppose it would be prudent to make sure there are some repeaters around for you HT to hit.

I have had a number of HT's now and I find that most of the wiz bang features, I just don't use. There are probably a handful of people that use their HT's for serious comms like emergency or people control that can use these features but I haven't seen a need for them. In fact, my first HT was a plain Alinco dual bander, it was huge (by today's standards) but had just the basics. I used this HT to figure out what features I really wanted. I ended up with an Icom T8A which is actually a tri-bander (6m,2m,440).

I would suggest you pick up a used, basic HT, use it for a year and see what it is you really want.

CONGRATULATIONS!!!

To really help you in your quest for that "first HT," please join your local Amateur Radio Club, and get some "hands-on" experience with a few models.

Have the owners walk you through a couple programming steps...find out for yourself what units are "intuitive" and "friendly" to use!

Source record: 125620

Hi Don,

"COR" is generic for "carrier operated relay".

It samples exciter RF output. When the exciter is activated, the COR
xistor conducts and energizes the relay solonoid.

The relay in old homebrew "Brick amplifiers" allowed either feed thru of
the exciter RF or when energized. routed RF through the amplifier.

(Used as HIGH OR Low power switching.)

Today, solid state switching rather than electro-mechanical is required
for TNC operation. Also relay contact "bounce" is "hazardous to the
health of MOSFET preamps in some of today's equipment.

The "COR" can be used to control other devices as well.

There are circuits illustrated in many BACK ISSUE articles of QST, CQ,
73 and HAM RADIO.

My IC-Q7A transmits 140-150 MHz and 440-450 Mhz out of the box. Have not seen
any mods for the rest of the 70 cm band transmit.

Source record: 125637

I am employed as an engineer by a cellular telephone company. One time I was asked to find an individual making prank 911 calls from a stolen cell phone. The initial rough triangulation was accomplished with measurements from the locate radios in the surrounding cell sites, but the final "kill" was made with a hand held receiver utilizing a yagi, rubber duck, and finally no antenna. No tricks were used to cause the jammer's phone to transmit continuously.

It might be difficult, but it is far from "nearly impossible".

Source record: 125640

I was wondering if anyone could point me in the right direction to find a used vinyl lathe. I would like to produce promotional vinyl for local DJs/Artists.
There is a large demand in the San Diego area, yet the production facilities have slow turn around and steep pricing. We would like to start a small student run production house.
I was told by my college professor that I may be able to find a lathe and other equipment from an old production house.... if you know of any facilities that are converting to CDs and have equipment that would be of use including a lathe, electro plating tank, or press, please e-mail me.
Thanks!!!

Also if anyone knows of a source for materials like vinyl, helium gas, and galvanics chemistry it would be of great help to us!!!

Nope, the previous poster is correct - at least for the Oregon Scientific
and Radio Shack (also made by O.S.) WWVB receivers. They only receive
for a short period of time in the middle of the night, then the receiver
goes to sleep until the next update time. If they can't get an update,
they'll attempt more frequently until they are successful, as I recall.

It sure sounds like something is holding down PTT all the time.
I had this problem once, and it took me an hour of fussing around
before I realized it was this 'other' little switch on top of the
mike that stuck the radio in ptt mode.

Mark Erbaugh wrote:

Hello Out There:

I am interested in the SGC Power Clear DSP/Speaker.
My main interest for the Power Clear unit will be mobile HF, and will be installed with an Alinco DX-70TH.

Has anyone out there had experience with this unit?
I would like to hear all, the good, the bad, and (of course) the ugly.

Please, Reply directly.

Thank you,

Clifford W. Owen

1826. Kenwood TM-742A Frequency Coverage

Newsgroup: rec.radio.amateur.equipment
Date: 1998-11-19 00:00:00 UTC
From: jdhoward@helps.helps.com
Message-ID: <vjp237.61e.ln@helps.helps.com>
Source record: 125399

I have a Kenwood TM-742A that worked properly for about a year.
Yesterday it reset itself to be a TM-742E. Instead allowing the
VHF frequency to be set between 144-148MHz, it will only set to
144-145.995. On UHF frequency it will only set to 430-439.995MHz.

I have done the reset procedure in the manual, F+VFO+POWER. That
did not fix it. How can I get it to work properly again?

73

Hi; i am using 72ohm coax for a receiver, and the input impedance is 50ohms on the
receiver, what angle do i bend the radials on a quarter wavelength for 144 mhz. and
for 440mhz, 45 or else to match receiver or coax?

thanks in advance
Joe

If the "illegal" is stationary, and transmitting continuously, then it is a fairly staightforward procedure, to triangulate and locate. But if the "illegal" is mobile, and transmitting only sporatically, it becomes extremely difficult to locate, since the signal is not on long enough to get a good fix on, and the next time it appears, it's in a different location.

Tracking down an illegal cell-phone, which, by nature, transmits continuously, is alot easier than a willful jammer of other radio services, who is savvy enough to make sure he's never in the same place twice, when jamming.

1829. Kenwood TS-870 vs KAM

Newsgroup: rec.radio.amateur.equipment
Date: 1998-11-19 00:00:00 UTC
From: Mark_Erbaugh@compuserve.com
Message-ID: <3653a4ac.43156860@news2.infinet.com>
Source record: 125445

I recently built an interface cable that goes between my a Kenwood TS-870 transceiver and a Kantronics KAM TU. The interface connects to the 870's ACC 2 connector and the key and RTTY jacks. Everything seems to work fine, but...

Twice now, I have gotten into a situation where the 870 will not go into transmit mode (it doesn't respond to either the mic PTT or SEND buttons). Cycling the transceiver power does not help. Neither does disconnecting the KAM from the interface cable. What does work is disconnecting all three (ACC 2, Key and RTTY) plugs from the radio. Once the radio is capable of TX, plugging the cables back in doesn't affect it (for a while at least).

Any ideas?

Mark

For receiving only, I wouldn't worry about any of it. The slightly lower inherent loss of the 72 ohm coax will offset any addtional feedline loss due to VSWR from the small mismatch.

1852. Need source for Kenwood & Icom plastic fastners

Newsgroup: rec.radio.amateur.equipment
Date: 1998-11-19 00:00:00 UTC
From: aci6@aol.com
Message-ID: <19981119140224.16646.00000111@ng-fr1.aol.com>
Source record: 125468

I am trying to locate a source for the plastic fastners that Icom, Kenwood and others used on the IC-251/451/551, etc and on the TS-520, etc to secure the small, metal doors that provided access to the VOX, scan, bias, etc controls.

These consisted of a body portion that fit into a quarter inch hole. This part had 4 'fingers' which were expanded to secure the door, etc when the other part, a small, plastic plug resembling an unthreaded screw, was pushed into the main body. All pieces were black plastic and over time some of the 'fingers' tended break off making the fastner much less reliable!!

I have some of the "less reliable" ones and wish to obtain several replacements.

If you know of a source for these, please reply via email. I will be happy to post my findings here as I doubt I am the only one in need of these parts.

Regards,

Bill

Macs don't need a TNC, only a packet modem. Download SoftKISS (a control panel that emulates a TNC) from the usual software sites. There's also a couple of shareware programs, I think called Savant and Virtuoso, that are packet terminal programs for the Mac.

Never used them myself, but I got that info from an old Ham magazine article. I might have downloaded the programs way back -- if you can't find them, e-mail me and I'll see if I can find them and shoot them to you.

From: Mike Tatum <mike.tatum@btinternet.com>
Message-ID: <731vh8lum1@uranium.btinternet.com>
Source record: 125473

Brian,

I have two SGC tuners here and I am very pleased with them both.
The problem you have is most probably caused by a bad earth.

I had the same problem here before I put down some 300m of counterpoise,
now the problem has gone away.

I use a home brew vertical which is only 5.5 meters tall and has a home made
egg wisk type capacitor hat at the top.

On this antenna I have worked all over Europe on 160 meters, and USA and
canada on 80m,
and more on the higher HF bands, so it can be done.

If you can, get someone to come over and get a good ground in place, if
possible
a good counterpoise as well, then I'm sure it will help.

What sort of antenna are you using, vertical or horizontal ?

Reply to me either in the news group or direct, I'll try and help
you get the tuner stable

Best regards and look forward to hearing from you.

Mike Tatum - M0AWS

Dave,

In my post I stated that no tricks were used to make the phone
transmit continuously. And it isn't like this individual just called,
kept the phone on, and walked away. He made multiple calls of various
durations, and on a number of different frequencies as he handed off
between cells. Changing frequencies (due to the hand-offs) certainly
didn't make it "a lot easier".

Hi and thanks for reading this. The name is John and I
have the following For Sale or Trade;

HAMMEG dual channel 20 Mhz. O scope.

Yaesu FT-208R 2 Mtr portable with desk charger, wall
charger, spkr-mike, manual and a fairly new battery.

Kenwood TR7800 2 Mtr 25 Watt mobile with mounting
bracket and manual.

TPL 450 Mhz. brick, 25-40 W in for 70-100 W out. Model
PA6-1FE covers 400-512 Mhz.

two (2) GE Phoenix-SX mobiles one on VHF and one on UHF.
Both are 16 channel, dual priority, programmable with
the hand programmer, all manuals and thick frequency
program book, mikes, ext. spkrs and mounting brackets.

KLM Echo 70 432 SSB/CW 10W PEP with ac power supply,
hand mike and manual.

two (2) UHF portables one GE MPR 2 channel 5 Watt, ext
spkr-mike and desk top charger. Note battery no good.
one Maxon 4 channel 5 watt, ext spkr-mike and desk top
charger with fairly new battery.

I would be interested in trading for;

Mirage 2516G 2 mtr. Linear or equal
R6000/R7000 HF vertical
HF multiband mobile antenna. (Comet or Hustler)
440 Mhz or Dual Bander mobile
220 Mhz mobile
Pent.II Computer or/CPU & Motherboard

or will sell for a reasonable offer on any item. Please
give John a call at 520-868-1337 (Arizona).

Though I forget the model name for it, Vertex does make a dual-band
commercial portable that you might be able to get down in the ham
bands. Check out Vertex's site(www.yaesu.com).

Thought I had a sale but it fell through. Put it on Ebay then quickly pulled it off before any bids. After all the bitching about Ebay I thought about it and decided to give you guys a chance at it first. If it is not sold before Sunday afternoon 11/22/98 I will put it back on Ebay.

Kenwood VFO-520 in near mint condition a 9 out of 10. This is the nicest one I've ever seen
Includes cable to connect it to radio.
$100 Plus UPS shipping from 75601 might entertain trades for a remote ant switch or quad parts.
Buyer to prepay before shipping.(That's the way I do it on Ebay and have never had a problem buying or selling)
If you wish to check my Ebay feedback rating my user name is my email address mduplissey@lsbs.com

Dave, my point exactly! There is a HUGE difference between tracking a stationary transmitter and a moving one. Especially one, located in a car, which could be a few miles away from the original position within literally minutes.

I still say my original statement holds true. It is heck of a lot closer to "nearly impossible" than "difficult" for an individual or group to locate a MOVING, INTERMITTENT transmitter who has the technical know-how to avoid detection.

VB

Hi Tom,

I had a similar problem and tried feed throughs and bypass caps without luck. I finally ran RF grounds to my rig, the amp and the rotor box and have not had problems since. The easiest way to accomplish this is to find a suitable old length of RG8 or 213U to run from an earth ground to your shack. Tag a 0.1 5000 volt cap from braid to center on each end of the cable. Then take it from earth ground to a suitable insertion point near all of your equipment. I ran mine to my metal desk then ran short jumpers to the equipment.

Let me know how you fare.

1901. Problem with Mirage B23G, Any ideas???

Newsgroup: rec.radio.amateur.equipment
Date: 1998-11-19 00:00:00 UTC
From: bob evinger <revinger@marshallonline.com>
Message-ID: <36540C2C.1BEB598A@marshallonline.com>
Source record: 125536

I have a problem with a mirage b23g that I would like to fix but have limited
test equipment available and dont really want to have to take the shotgun
approach to parts replacement. If anybody on the group has experienced similar
problems and can point me in the direction of a likely suspect component(s)
I would appreciate it.

The problem, I believe was induced by an unintentionally high applied RF input.
Symptoms, seem to be only present when FM is applied after transmitting and
Receiver will show a high received signal amplifier requires being powered off.

If you would please respond via email as well as post I would appreciate it.
I dont fully trust my ISP's news server to have the posts show up.

thanks for your time

bob

> Has anyone had good responses from them? Pros and Cons welcome!
> 73...Alan

I had absolutely great service from them. When I got the programming software I had to try to use it in the car - juggling a none-to-good laptop connected to the mounted radio. _I_ was making a mistake trying to read the directions. More than a little frustrated, I e-mailed RT Systems about the problem (and I was not especially polite about it). The next morning I got a very polite, completely professional, reply showing me the problem -- and not even pointing out that it was all my fault.

I don't care much for the attitude of some of their sales folks, but their tech support for the programming software has been top notch.

1913. Need Oscilloscope for 12v vehicle

Newsgroup: rec.radio.amateur.equipment
Date: 1998-11-20 00:00:00 UTC
From: Richard Wilder <wilder@u1.abs.net>
Message-ID: <tIi52.46$K4.163593@news.abs.net>
Source record: 125348
Cross-posted to: sci.electronics.equipment,rec.radio.amateur.equipment

Can you recommend an oscilloscope for my application? I need a dual channel 'scope for operation in a vehicle (12vdc) to compare two audio channels. I will be comparing RFI emitted from power poles near the vehicle with audio of noise received over an FM UHF circuit from a distant fixed location. The objective is not to call in a bucket truck until I'm certain that the RFI source found has the same signature as the noise that caused a power customer (me) to request assistance. It is not uncommon for the utility technicians to find a dozen or more RFI sources before finding the one that caused the complaint. I believe a 20 MHz dual channel would be sufficient. I must stay under $1000; half that is preferred.

One approach may be to get a small bench 'scope (such as Kenwood CS-4125 for $389) and operate it from an inverter. But, how "clean" are inverters? Do inverters have sufficient frequency and wave form accuracy to support a 'scope? Do inverters radiate RFI themselves?

Scopes that operate with a computer or hand held 'scopes are not suitable. The 'scope must be a simple stand-alone unit that will be easy to operate by the vehicle driver.

If I develop a effective capability to locate RFI sources then I'll try to show the local power company how to do it. I've had their RFI guys out and they dp work hard on RFI complaints. I would like them to do less work, make less repairs, but be able to find and repair the RFI sources that degrade my amateur radio station receiving performance.

Exeltech makes pure sinewave (<2% distortion) inverters. They produce
gorgeous sine wave output, even when being fed DC with a lot of ignition
"hash" on it.

Trace makes a "sine-wave" inverter that has a stepped "mayan-temple" wave
with, I think, 30 or so steps in it. Some companies sell inductors to
clean up inverters poor output, but I wouldn't go that way.

You might see "modified sine-wave" or "pseudo sine-wave" inverters out there.
Don't touch 'em. They are much closer to a square wave than a sine wave.

I'd go with the Exeltech, if an inverter with an AC scope is your only
option. However, as you guessed, they do emit RF noise.

(I've no relationship with them other than being a satisfied customer.)

Hi Richard,

Some inverters are "clean" and others are not. I have seen artifacts from bad inverters manifest themselves in the measured signals. I am afraid that the inverter that you use to power the inexpensive bench scope may need to be more expensive than the scope itself.

One option is a Fluke Scopemeter. I have used the Fluke 99 in vehicles plenty. It is portable, rechargeable, etc. Another option is a 20MHz Hitachi small bench scope that has a 12VDC power input on the back. Don't recall the number but I know it is around 500-600.

Cheers,
Dan

Get some Novus, Meguars, or Blue Magic plastic polish. They all are marked as being able to polish out fine scratches.

Failing that, the "fine cut" paint polishes sold in auto stores, for removing swirl marks and fine scratches on clear coat finishes will be a good substitute.

Finally, any fine metal polish (as sold for polishing soft metals like aluminum mag wheels) - Blue Magic, Meguiars, Mother's, Eagle One, Flitz, Wenol, Nevr Dull, Happich Simichrome, etc - will do the job.

Be careful about recommendations for using toothpaste or more coarse abrasives like Brasso and Noxon. These may take out the scratches but leave the surface less than optically clear, as they tend to use harder and more coarse abrasive particles.

I'm interested in buying the following Racal items to complement my
recently purchased RA 17mkII.

RA 37 L.F. adaptor.
RA 121 SSB adptor.
RA 66 Panoramic adaptor.

simon.cox@breathe.co.uk

Preferably in the uk because of size and weight of items.

Hi Darwin,

Thanks! That did the trick. I like the radio for its size. Only thing
I dont like is the stupid 5 second resume on scan. I would think
the standard carrier operated scan would be in all todays radios.

Steve

> Help
>
> Thanks
>

If I recall correctly, the little '5' when setting the offset is not actually part of the offset, but refers to the scanning mode. I believe this means that the radio will scan on after 5 seconds. This of course is based on a ten year old memory and I may be completly wrong.

I don't know what you mean by a "module". The '470 will crossband repeat right out of the box. The only problem is that there is no real audio path from the RX to the TX. To provide an audio path, build a short cable with a 1/8" plug and a mini-plug that connects the MIC jack tip to the Earphone jack tip with a series 100K ohm resistor.

Plug this in and:

1 - select two simplex frequencies
2 - turn the radio off
3 - hold the RPT button while turning on the radio
4 - Adjust volume control for best repeat audio level.

You will note that the "t sq" indicators are flashing. This means that the radio is in repeat mode. Note also that the radio automatically selects low power on both bands.

I saw an ad obviously aimed at the Ft-847, Ft-100, and IC-706 that inferred
that for the price of one of the all in one radios you could buy separate
Kenwood HF, VHF, and UHF radios. I wonder if this is their (lame IMHO)
strategy?

Hello All,

This is Mike, KQ6MU, in Palmdale, CA.

I have a question regarding the Yaesu FT-847.
I own one, and am very pleased with it!!!
I am trying to find out how to use it with the computer.
The rig that I have, had the Software Upgrade to it.
My goal in this, is to be able to have an Internet Remote receiver.
I would like it to be FULLY contolled via the Internet.
Much like the one on RA Labs.
I read in my manual, that I can use a Null Modem type serial cable.
Would this work for my application???
Can I get this cable from Best Buy???
Which software is best for this application????
I do have the "FT-Manager."
I would like to get as much help as possible on trying to hook up
my FT-847 to the Internet.
Any info is appreciative!!!

Also, check out my WebPage:

http://home.earthlink.net/~mikrounit/radio

Thanks & 73,

Mike KQ6MU

I assume you are talking about mail order companies that provide
amateur radio equipment. Seems like most amateur radio stores these
days do. Many of them also have web sites. Here are some that I have
dealt with successfully:

East Coast Amateur Radio
716-695-3929
http://www.eastcoastradio.com
Tonawanda, NY

Universal Radio
800-431-3939 / 614-866-4267
http://www.universal-radio.com
Reynoldsburg, OH

Texas Towers
800-272-3467 / 972-422-7306
http://www.texastowers.com
Plano, TX

Amateur Electronic Supply (AES)
800-558-0411 / 414-358-0333
http://www.aesham.com
Milwaukee, WI (also in OH, FL & NV)

R&L Electronics
800-221-7735 / 513-868-6399
http://randl.com
Hamilton, OH

1932. Re: Icom wont respond?

Newsgroup: rec.radio.amateur.equipment
Date: 1998-11-20 00:00:00 UTC
From: Louis Bybee <louisb@datacomm.com>
Message-ID: <3655ED9C.E2BF023E@datacomm.com>
Source record: 125367

Below is a post I sent to this news group on 11-6-98. I posted the message out of frustration, not being able to make effective connection with the people at Icom America Tech Support. My intent was to discover if my experience was an isolated incident, or was this common practice for Icom America. I didn't intend to malign Icom or it's products. My original post produced the following results:

A few flaming posts from people who either didn't read the post in it's entirety, or couldn't read and/or understand what was written.

A few people with what appeared to be unresolved issues, and/or bad experiences with Icom America.

The overwhelming majority (a little over 80 o/o) of the people who answered in the news group, or directly in EMAIL to me, reported good experiences with Icom America Tech Support, and the equipment in general.

An answer from Gary Fiber, a Tech Support representative from Icom America, indicating he had tried to contact me with no luck because of bounced EMAIL.

Further EMAIL communication with Mr. Fiber resulted in an agreement to furnish the part, at no cost, necessary to allow the radio to perform as it was represented to me at the time of purchase. The parts were received in a timely manor, installed, and the radio performs as I expected when I purchased it.

What I have learned from this, and my observations are, after the smoke has cleared, is:

My actions may have contributed to the problem not being solved sooner.

It would have been better if I had been a more informed buyer.

During a frenzy like the one at SeaPac, it would have been easy for the sales representative to misunderstand me, or me not understand her response to my questions.

I should have taken the time to evaluate the equipment's capabilities in a more timely fashion after purchase.

After discovering the capabilities of the radio didn't meet what I felt I was promised, and having to wait too long on toll incurring customer support phone lines for my comfort, and receiving no answer to my EMAIL's, I could have written a letter asking for resolution.

The radio has always worked well. Now it works as I had first expected.

I feel Icom America responded, once we effectively communicated, in a manor consistent with a company that I would buy from again, and possibly in excess of what would be required.

Mr. Fiber left me with the impression that it mattered to him if I was an unhappy customer.

Thank you Icom America, and Mr. Fiber!

Louis

"Eric F. Richards" <efricha@flatland.dimensional.com> writes:
>You might see "modified sine-wave" or "pseudo sine-wave" inverters out there.
>Don't touch 'em. They are much closer to a square wave than a sine wave.

It depends on the scope. If the scope has a mains power transformer in it,
it probably wants to see a sine wave.

But many recent scopes use switching power supplies. The input waveform
is immediately rectified to DC, then used to power an internal high-frequency
inverter. A square wave input is just as good as a sine wave to these
scopes.

My Tek 2215, which is at least 15 year old now, works this way.

The other thing that might be worth considering is one of the Fluke or
Tektronix handheld scopes with LCD display which operate off batteries.

>Can anyone tell me which may be a better radio and has anyone compared
>them both? I going to but a new radio soon and I'am thinking of either
>one.

Hi Robert:

It really depends on what you want in a radio. I had someone give
me a Yaesu FT 1000 to swap even for my OMNI VI and he left it in my
shack next to my OMNI VI for two weeks for me to try out. I kept
the OMNI VI. Sometimes I regret it, mostly I don't.

My opinion: If you are an SSB operator primarily, the FT 1000 is
"better" in many respects. Nicer audio, better selectivity for SSB,
smoother operation (and there are the other advantages like built
in power supply, auto tuner, stuff like that).

If you are primarily a CW operator, the choice gets tougher. I
found the 1000 to be very close to the OMNI VI (at low speeds for
QSK... I understand the OMNI VI is head and shoulders better than
the FT 1000 for really fast speed QSK). Selectivity is great on
both, but the OMNI VI has the edge (theorically and practically)
especially now with the higher quality INRAD filters available
for it.

Detailed comparisons are difficult unless you have both radios
in front of you. The OMNI VI is cheaper. It runs on a battery
(12 volts) and the 1000 doesn't. The 1000 is in a much nicer
box, has power supply and auto tuner. Far nicer to use on SSB
while the OMNI is really smoother for CW.

Good luck. Try them both.

Check page 18 of the manual. Go to the line that says "CALL" and look in the
"if pressed after pressing the FUNC key". In VFO mode this adjusts the
tuning step, in memory mode it turns on and off the memory skan skip.

I don't think it is possible to do this.

John, W2FS

1946. FS: complete Yaesu HF station

Newsgroup: rec.radio.amateur.equipment
Date: 1998-11-20 00:00:00 UTC
From: Radio Randy <rjones@plix.com>
Message-ID: <36566A18.36AF@plix.com>
Source record: 125381
Cross-posted to: rec.radio.amateur.boatanchors,rec.radio.amateur.equipment,rec.radio.swap

Hi gang,

A complete HF station, consisting of a Yaesu FT-101ZD (little bro to FT-901), SP-901P speaker/phone patch, FC-901 antenna tuner and a Shure desk mike. Also included are operating manuals for a 3 pieces of Yaesu gear and the factory service manual for the 101ZD.

This package HAS to be worth at least $500 which is the price I'm asking if it doesn't sell on eBay in the next 2 hours. I'll even pay the shipping.

You can see it (a lousy photo, though) on eBay at:

http://cgi.ebay.com/aw-cgi/eBayISAPI.dll?ViewItem&item=42053613

If you're interested, drop me an Email. If it doesn't sell here, I'll relist on eBay and keep trying. Like I said, a "complete" station like this ought to be worth the asking price. Thanks.

Radio Randy

Gang,

I am looking for a reference guide (along the lines of Fred Osterman's Shortwave Receivers) for the various major ham lines. Something that would provide specs, accessories, etc for radio from the past 25 or so years.

Quick example of what I am asking for is what is the Icom equivalent of the Kenwood TS-530S?

Does such a reference exist either online or on paper?

Thanks

Mark Bryant

1962. How do you lockout memory channels on the Alinco DJ-C5?

Newsgroup: rec.radio.amateur.equipment
Date: 1998-11-20 00:00:00 UTC
From: stevehan@ptd.net
Message-ID: <Ao552.2083$Cy.1107@nnrp2.ptd.net>
Source record: 125411

The Oct CQ review of the DJ-C5 and Alinco webpage mention the ability
to lockout/skip memory channels during scan. How is this done?
I can't find mention of this in the manual.

Also is there any trick to keep it on the memory channel during scan
until the carrier drops instead of resuming scanning after 5 seconds
of audio?

TIA
Steve, N3FWE

Yes, they did, and a good radio. BUT Ford started the game with the Model T
(model A??) , but went forward and produced better models afterwards
rather
than keeping that same design. I have a TS-50 I use at work, bought it new.
It does HF, and does it well. The Icom 706, later the 706MKII, and soon the
MKIIG
have gone far beyond it featurewise, while it remains the same TS-50 of 5
years ago.

So, I will repeat the question, as a loyal Kenwood fan: Whan is Kenwood
going to come out with a product comparable to the FT-100 or the 706?

I always come up with varying results when I use a search engine to look for an amplifier.

I'd like to hear from anyone and everyone privately about what words YOU use to search for amplifiers.

Which words individually?
Which two or three word phrases?
What can you think of?

Please reply privately to me as this won't be of much interest to most newsgroup viewers.

Hi all , I have a Yaesu FT2400 that has decided to stay squelched most of the time . The radio has no output to the speaker (internal or external) unless I "quick key " the radio or turn it off and on again , then it sounds perfect until it squelches and wont hear anything again regardless of S-meter reading . This problem is from the time I turn the radio on which rules out anything to do with heat which was Yaesu's answer . I have opened it up and cleaned out the pot as best I could but no help . Anyone have similar problems or do I need to pay the factories extraordinary price to let them fix it ? Thank for any help or suggestions .

Has anyone used the scratch remover advertised for cars on TV? I wonder if it would work on a radio. I have some scratches on a Kenwood TS440S. Some of the scratches are on metal and some on plastic.

Check out the 'Radio Buyers Source Book' from the ARRL book store - there's
a vol. 1 and vol. 2...

I'm not sure what years are covered, but the books have product reviews for
a lot of HF gear, UHF, VHF...etc....

Hope this helps...

1979. HTX-242 Mod is for REAL

Newsgroup: rec.radio.amateur.equipment
Date: 1998-11-20 00:00:00 UTC
From: matt.caldwell@vc3.com
Message-ID: <7345k5rdo1@nnrp1.dejanews.com>
Source record: 125428

THIS MOD DOES WORK, SOME PEOPLE ARE JUST IGNORANT TO THE FACT THAT RADIO SHACK RADIOS CAN BE MODIFIED, YOU CAN EMAIL ME if you have any questions @ mattx.caldwell@intel.com or matt.caldwell@vc3.com or falken1@my-dejanews.com My call is KD4BKU.

Special NOTICE: This is for the HAMS who say radio shack radio's are "can't be modified, because the FCC was real strict with Radio Shack", or buy a real radio so that you can modify it. That is a bunch of bull.

Mod: Expands TX from 143-149mhz to 136-174mhz

Tools Required: Phillips Screwdriver, Mini screwdriver, Soldering Iron (Fine tip) , NeedleNose Pliers

Process:

1. Remove Screws on bottom and top 2. Take the Bottom and Top off the Radio 3. Unplug Speaker from top of the radio and remove the dials from the face plate 4. Unscrew the screws on the top and bottom of the face plate. 5. CAREFULLY: remove the face plate from the radio 6. Remove the bolts and washers (little rings) from the dials (countersunk into the dials). 7. CAREFULLY: remove the LCD and plastic around it by pulling gentle and wiggling it a little being careful not to bend the LCD pins. 8. Remove the screws holding down the PCB from the cases 9. CAREFULLY: (Plug in type PCB) remove the PCB from the radio and place the VFO tuning dial face down and to your left. 10. There will be two blue jumper mounts on the PCB. Remove the 1 closest to the 2 black raised chips that are closest to the VFO tuning dial (this jumper should be near the middle of the board) The other jumper makes the transmitter do 143-144 (military) and it is near the side. 11. Put all the parts back together and blamo you have 136-174mhz RX/TX

Notes: If you do it right you won't even loose your memories. This mod took me about 30 minutes to complete and my radio is working fine. However
I'm sure this voids the warranty and the service contracts so you may not want to do it for that reason alone. I checked the radio out (with a frequency counter) on several frequencies and it is performing well. This mod requires a little skill but most people that are hams could do this mod. This mod was given to me by a fellow North Carolinian
KC4VYY , and I just put it in a simpler form. I wanted to thank him.

Hi,

Urgent Need.....

I am looking for a Kenwood SM-230 Station monitoring scope. It is the only model that works correctly on the IF stage for the Kenwood TS-850S or higher class of HF radios. Will buy out right or consider some type of trade. I can be reached here or at randyf@alltel.net or at 740-587-7955.

Thanks

Randy - N8XXQ

The pricing for the rig is often indicated where the model number falls in
the product line. I dont follow Yaesu but what are the price of the next
highest model number and next lower model number?

1987. Re: How do you lockout memory channels on the Alinco DJ-C5?

Newsgroup: rec.radio.amateur.equipment
Date: 1998-11-20 00:00:00 UTC
From: Ralph Mowery <rmowery@ibm.net>
Message-ID: <36557B13.5C72C0EE@ibm.net>
Source record: 125436

Don't know about that rig, but I chewed out an Alinco Rep at a hamfest (not really chewed him out, but did complain) about a DR-130 that did the same thing. No way to lock out the memory channels you don't want to scan. Either just program in a couple of memory chanels or do not scan. This bunch of junk might have been acceptable in the 70s when the synthised rigs first came out, but not past the 80s for sure.

I also hate the 5 second stop and resume. Would complain more, but did win the radio at a hamfest. Should have traded it off while new..

> The Oct CQ review of the DJ-C5 and Alinco webpage mention the ability
> to lockout/skip memory channels during scan. How is this done?
> I can't find mention of this in the manual.

I might be prematurely posting, because I haven't tried it yet
myself.

On another news group for those Palm Pilot users, someone
suggested using a CD scratch removing product for taking the
scratches out of the plastic screen. This seems to be the most
logical choice due to the sensitivity of CD disk players.

The filter goes in the last IF amplifier and sharpens up the CW passband a bit more and increases the rejection outside of the passband over and above that obtained with the filter that comes with the radio.

Hi Steve, This was a mistery to me also until I read the book over and over. Go to page 20 the Quick Reference, then the call key then column 3 want happen when Function and call keys are pressed. It remove the decimal when in the Memory mode, this remove the scan from the channel. This works with all the DJ-C5, DJ-C1, & DJ-C4. 73 Dar K6USW

>Yaesu line/stopped production. Anyone have update??
>
>Gary, N0GS

Gary;
The thread stated the FT-1000/D have not been mfg. since 1995, so all stock at dealers is at least 1996 vintage, and that it has not been mfg. since.
The Omni VI + question vs 1000 is this:
The Ten-Tec is of 1998 mfg. with DSP but no gen.cov.;
The 1000 has gen. cov.

2008. YAESU Home page--corp info

Newsgroup: rec.radio.amateur.equipment
Date: 1998-11-21 00:00:00 UTC
From: braincells@mindless.com
Message-ID: <36574a00.2053175@netnews.worldnet.att.net>
Source record: 125258

If anyone has an address for Yeasu's home page, if they have one, i would appreciate it. I have a beef with the company. I bought an FT840 HF radio and the brochure shows that one of the options is a phone patch (LL-5). However, after I got it home and started using it, the radio store said that the phone patch LL-5 could not be hooked up directly because the company did not put a patch-in plug in the radio.

Anyone with any ideas of how to fix this situation, please email me at

SEVENTH@worldnet.att.net. Thanks & 73's

Outstanding, this is exactly what I have been looking for. . .please advise
total Ic so I can find a modulation transformer appropriate to the amplifier
for that full AM sound. . . .

I have a brand new, old stock Turner model 450C mobile high impedance microphone for sale. Extremely hard to find item for your older rigs, and this one's never even had a plug soldered to the cord!
I posted a picture of it and accompanying box / lit at:
http://www.megsinet.com/steam/mic.jpg
I bought it from a dealer who told me he had an old stock mobile Turner mic. Well, I thought it was high impedance.
Anyway, I'll ship it for the first thirty bucks. Or you can pick it up in west suburban Chicago.
Thanks... Mike 708-795-7739

Hi all,

I am selling my Yaesu line up consisting of;

FT-757GX.....Rig
FC-757AT.....Auto ATU
FP-757HD....Heavy duty power supply 20amp

I have been offered £400.00 by a dealer and I will accept this offer in 14 days if I do not get a better offer, the Equipment is in good working order and the reason for the sale is I am about to move on to a boat to live and the 757 is a little bit to big to fit onto the boat.

today is Sat 21st November.
I am QTHR

2014. Re: JRC 145/245

Newsgroup: rec.radio.amateur.equipment
Date: 1998-11-21 00:00:00 UTC
From: "Brian J.Rehmer" <brehmer@ctlnet.com>
Message-ID: <36577650.EBE59051@ctlnet.com>
Source record: 125264

Hi John,

I've had a 245 for about a year and a half. I have some mixed feelings, but don't have any experience with the 1000MP.

I do alot of SW/AMBCB listening and it is the best sounding receiver I have heard. Great low end and filtering. Nice features - I like the notch filter that track's, so if you set it on a signal and tune the VFO the notch stay's put on the orignal freq you set it.

One area I am disappointed and would be interested to hear if you hear from anyone else is the amount of spurious signals generated inside the rig. This seems inevitible with most radio's nowaday's with all 'evil' digital stuff in the box. Please drop me a line of other 245 user's you received comments from so I might check with them on their experience with RX Spurs on there units.

Alot of the spurs are not necessarily bad - i.e. most are below S1 to S2 and are covered with background noise when an antenna is hooked up, but I have a set at mulitples of 9 MHz that are S7.

Don't let me scare you away with these 'spur' comments - the 245 is excellent so far outside of this. I use it alot on 6 meters, some on 20 and 15 and much much more on SW.

I have much more info if you would like - I would like to get a little discussion going on these units to dig out some user discussion.

Good Luck,

Brian, KC4KK

I think that everyone, including Yaesu, is blowing things all out of
proportion to reality.

I'm willing to bet that the "warning" originated from the fact that
older models of the FT-50R (and probably, although I don't follow it
as closely, the FT-51) could be tricked into an unrestricted band plan
by starting up a data transfer and then yanking out the data cable
during the transfer. The transfer would abort, but the radio could
then be programmed to receive and transmit ANYWHERE that its VFO's
could take it.

Later versions of the FT-50R firmware, and later versions of the ADMS
software were designed to prevent "coitus interruptus freebanding" of
the radios. For the benefit of covering their security hole a little
more completely, this "warning" was added.

I have read (on this newsgroup, of all places) that some folks have
scrambled up their FT-50R's by attempting this, and once it's screwed
up, it takes a fair bit of work to get it restored back to a normal
and/or a usable configuration.

I have *NEVER* heard of anyone damaging (or messing up) their radio by
a data communication error other than intentionally yanking out the
cable during a data transfer.

I have uploaded and downloaded files between my PC and my FT-50R many
times, and on a handful of occasions the transfer failed (and I got the
"CERR" message on the LCD), but no harm was done.

I see no reason to be afraid to use the ADMS software.

BTW, there is ALSO no reason to try the cable-yank trick to freeband
the radio. There are safer and more effective alternatives that have
appeared many times on this newsgroup for the FT-50R, and I assume that

some variation of them also works for the FT-51. But since I own the FT-50R and not the FT-51, I don't know for 100% certain.

I disagree about the lack of utility of the ADMS software. Granted, it is not intended for real-time radio control, but it does what it is designed to do reasonably well. It is a lot less tedious than manually filling up all the memory slots by hand. And if you travel, you can make up one data file for each city you visit (with the help of your handy repeater guide), and change the personality of the radio in a couple of painless minutes.

I do agree that it would be real nice if the manufacturers would release the details of the data transfer protocols, so that programmers could increase the value of these radios by making shareware, freeware, and low-cost alternative software available to the Amateur community. I suspect that this is unlikely to happen for the FT-50/FT-51 because of the ability of correctly-written software to "unlock" the band plan built into the radio. But there is at least one programmer out there who has taken on the task of studying the data stream and decoding it so that he can write a Linux version of the software.

The earpiece could be anything from 8 to 16 ohms
the mic should be 200 to 450 ohms
you could make a switching unit that clamps to your
steering weel with both the up and down switch and
the push to talk switch
then you build and interface box using mini phone
jacks for /earphone/mic/switches/ or get a vox unit
Monitoring Times Experimenters Corner,has run
about 6 of these circuits in the past 10 years
All Electronics/Marlin Jones/Alltronics have
run ads for such a single earphone headset
withh a 200 ohm mic for about ten bucks

I have one and I ain't selling it. It is an outstanding radio, in my opinion, with just about every feature you could want in a dualband handheld. Good sensitivity, good intermod rejection, simultaneous operation on both bands, crossband repeating, alphanumeric memory channels, multiple scan modes -- the works.

2018. Re: FS 5 KW CB amplifier Class C.

There are a couple of obvious problems here... The first is that this amplifier is illegal by three orders of magintude for the 11 meter Citizens Band. The second is that Class C amplifiers are non-linear by design and therefore unusable for sideband amplification. Strictly speaking, the use of the term "amplifier" is inconsistent with Class C. It would require a 2,500 watt modulator to use it for AM. Your best bet is probably to part it out.

From: Marty Duplissey <mduplissey@lsbs.com>
Message-ID: <738567$t08$1@supernews.com>
Source record: 125272

Description of Problem: Receives fine but no or very little transmit.

What I'm getting on 80 meters into a dummy load is about 2 watts out on cw with the car level
wide open and everything tuned for max watt-meter reading using a decent watt-meter. In this condition the ip meter reads pegged. and the HV is good The finals don't show any visible signs of stress ie red glow. If I back off the car level I can get the ip down to measurable level at about 1 on the car dial. But if if I'm getting a current drop by playing with the tune it is almost non-existent. Drive voltage, HV and 210 supply seem fine.Any Ideas?

Hello Bill,
Just last week a friend of mine brought over a product called NOVUS. We used it on my HT, the display window was really scratched up bad. We put on three applications and it now looks like it did around the first year I owned the HT, very good and shinny now. Novus comes in 3 grades, depending on how deep your scratches are. We used #2, with 3 used for the really bad ones. I figure if we would of had the #3 grade, we probably could of removed all of the scratches.

currently have ge delta 6m,2m and 70cm in car. have two spare 440 deltas. have scan control heads, radios are operational. tired of tightening plugs and so forth (car is four cyl and rattles plugs loose). deltas are 110w 120chnl rigs. they are currently programed with just about every repeater pair. setup comes with comspec external tone encoder.

swap for... icom ic18,ic28 and ic48 in operating condition. (these are small icom single band rigs that were made in the 80's) have ic38, want to have all the same rigs across the dash.

will consider other rigs such as kenwood providing all three (6m 2m and 70cm) are the same line.

any takers? email me. i WILL NOT split them up. they go as a package. the whole kit and kabutal, from my car to your house.

2033. Is ADI AT-600 a good Rig?

Newsgroup: rec.radio.amateur.equipment
Date: 1998-11-21 00:00:00 UTC
From: Jeff Gibson <GIBSONJW@worldnet.att.net>
Message-ID: <3656795E.D371A97D@worldnet.att.net>
Source record: 125303

I recently passed my Tech-Plus test, and was strongly considering the ADI AT-600 as my first rig, but in browsing this newsgroup, there seems to be alot of people trying to sell them.

Is there a problem with this radio? Does anyone like the radio?

Please respond either pro or against.

Thanks in advance!

Jeff Gibson, KB0DSH

>have one, and if it works, etc. I really don't want to reinvent it to
>get back on CW with a bug. Frank

Hello Frank,

I still use my 1974 Original (Standard model) and it works perfect. 574 contacts in the 1998 CW SS, using only that bug.

I don't have a bug for sale, but you might try rec.radio.amateur.boatanchors. Used ones are expensive - lots of collectors.

The Vibroplex Company is still in business, and still making bugs. Visit them at

http://www.vibroplex.com

The cheapest model bug is $150, which is not cheap, but not really bad when you adjust for inflation. They last forever, so you really only need a single good one.

Message-ID: <736la9mkr1@news3.mr.net>
Source record: 125320

Yes, I will do the trade with you but will require an additional $400 from you to complete the deal. I was going to ask more but my 706 has been dropped several times and all the knobs are either broken or bent and the faceplate is smashed. Other small signs of wear are also present but I'm sure you'll be able to get it working again. I'm sure you will find this quite fair and I think we should both ship our units on the same day. Unfortunately, I do not have the original box and while the microphone was completely crushed, I will send you the element because it may still work. Thank You..

In article <tIi52.46$K4.163593@news.abs.net>, Richard Wilder
<wilder@u1.abs.net> wrote:

Can you recommend an oscilloscope for my application? I need a dual
channel 'scope for operation in a vehicle (12vdc) to compare two audio
channels. I will be comparing RFI emitted from power poles near the
vehicle with audio of noise received over an FM UHF circuit from a distant
fixed location. The objective is not to call in a bucket truck until I'm
certain that the RFI source found has the same signature as the noise that
caused a power customer (me) to request assistance. It is not uncommon
for the utility technicians to find a dozen or more RFI sources before
finding the one that caused the complaint. I believe a 20 MHz dual
channel would be sufficient. I must stay under $1000; half that is
preferred.

One approach may be to get a small bench 'scope (such as Kenwood CS-4125
for $389) and operate it from an inverter. But, how "clean" are
inverters? Do inverters have sufficient frequency and wave form
accuracy to support a 'scope? Do inverters radiate RFI themselves?

Scopes that operate with a computer or hand held 'scopes are not suitable.
The 'scope must be a simple stand-alone unit that will be easy to operate
by the vehicle driver.

If I develop a effective capability to locate RFI sources then I'll try
to show the local power company how to do it. I've had their RFI guys
out and they dp work hard on RFI complaints. I would like them to do less
work, make less repairs, but be able to find and repair the RFI sources
that degrade my amateur radio station receiving performance.

Mr. Neece has a problem that someone has his property and he hasn't received proper compensation, but you Mr. Rotflmao have the real problem! You are definately an idiot, and you sound like a spoiled brat and totally self centered as well.

Had it been your equipment, I think you would be trying to get it back or receive what was owed you, just as Mr. Neece is trying to do. I could care less if Mr. Neece is "in business" or not. To question another man's integrity, first you have to display that you have integrity yourself!

Be very thankful that I am not your father. For you would not soon forget the correction that I would give you! Maybe I'll see you at a hamfest and we can discuss this farther. I am very easy to spot. I stand 6'8" and weigh 325 lbs. and have black hair. You'll know me when you see me. In the mean time, I suggest you keep your smart mouth shut. CU Mitch AE4YW

Marty,

HAve you ever tuned a tube output radio before?

If you have the meter in the IP postion and you are peaking
it, you are doing it WRONG.
ALWAYS DIP YOUR PLATE CURRENT IN THE IP POSITION!
ALWAYS!
DO YOU HAVE THE BOOK for the radio????
Excessive plate current will distroy your 6146 tubes in short order.
ALWAYS DIP YOUR PLATE CURRENT!
Then tune the switch to RF to tune for maximum output.

2101. Whats Up with Hy-Gain?

Newsgroup: rec.radio.amateur.equipment
Date: 1998-11-22 00:00:00 UTC
From: JIM B HAYNES <W6PXM@prodigy.net>
Message-ID: <73ab47$b4q4$1@newssvr04-int.news.prodigy.com>
Source record: 125165

I am in the market for a new rotor. I have always used hy-gain, but I noticed the neither HRO or AES is carrying their rotators now. I wonder what is going on? I am not sure if I want to go to the Yaesu rotator. I am using about 11 sq feet of antenna, in-tower mounted, and the ham 4 is the way to go. It looks like the 800 series would work, but I dont want to hassle with a new rotator plate for the tower, or have to guess if it will fit in the tower I have.

I would appreciate any comments!

i've mounted the faceplate to the drivers side visor.
when you flip down the visor you get the controls, flip it up and it's
out of sight.
the mic is plugged into the main box rather than the head unit.

very nice of icom to give you the choice of where to plug the mic into.
way cool

I would not threaten someone in a open forum like this for if you do ever meet the person and do anything to him it will be able to be shown as premeditated. And you could be charged as such. People remember whatever you say here can and will be recalled if needed by someone and act acordingly. just my .02 cents worth.

2127. Any Racal RA6790 experts out there?

Newsgroup: rec.radio.amateur.equipment
Date: 1998-11-22 00:00:00 UTC
From: rflukes@nickel.cs.umanitoba.ca
Message-ID: <7381aj$s3a$1@canopus.cc.umanitoba.ca>
Source record: 125198

Hello,

I recently purchased an early RA6790 receiver (S/N around 150) which
has a very nasty design flaw. The first mixer board has a 2N3866
transistor which acts as a "driver" stage between the LO and the
mixer (actually another stage consisting of complementary transistors
exists between this one and the mixer) and it runs extremely hot.
The circuit is such that 100mA always flows through the transistor and
through a 15 ohm resistor causing the transistor to dissipate about 1.5W.
Remarkably the original heatsink is tiny and I can't believe these
transistors could last very long in the field. I am staring at my unit
and the schematic and just can't believe it...

Has anyone seen this problem before.? Also, has this circuit been
changed in later models? Does the RA6790/GM have this same circuit?

Any help would be greatly appreciated.
Thanks,

You have a lot of "provided's" there, and there are a number of others.
Passing binary data without a checksum or handshake protocol is poor
practice. Sooner or later it *will* result in a corrupted bit. Having a
semi-intelligent boot loader in the radio capable of handling protocol
transfers is just good engineering practice. We should expect no less
from the radio manufacturers than what was standard practice for
computer file transfers nearly 20 years ago.

I built one years ago, when I was stationed in West Berlin and operating with a reciprocal license (DA1QA). It was a superb amp, and very, very clean. I ran it in an apartment building, routinely got about 1200W PEP out of the thing, and never had a TVI complaint.

When I was transferred back to the U.S. in 1979 I sold it to another ham. I chatted with him a couple of days ago, and the thing is STILL running at age 22. Go figure.

I recommend any of the Shure Microphones. I have found the EM-28's
and the 444's at swaps for as little as $2 and at most they are worth
$30 if mint.

2132. Icom SM8 vs SM20 - or A N other?

Newsgroup: rec.radio.amateur.equipment
Date: 1998-11-22 00:00:00 UTC
From: Eric Warner <eric@northop.demon.co.uk>
Message-ID: <TA9vjDAnN7V2Ewbq@northop.demon.co.uk>
Source record: 125203

Hello All,
I couldn't resist any longer and have recently bought a new
Icom 706MkII at 'bargain' price as it makes way for the MkIIG.
Now Santa Claus has said she'd like to buy me a desk mic for Christmas -
good old Santa!.

I suppose the 'obvious' choices are the SM8 or SM20. They do seem a bit
expensive at around UKP 120 (about 200 USD) so I was wondering:

1. Are they 'just' electret inserts mounted in a fancy stand?

2. Forgetting twin leads, looks etc, how do they compare with each
other as microphones?

or

3. Years ago, the Shure 444 was 'the thing to have' - would I be
better off looking for the modern equivalent of that, and if so, what is
it?

I'd be grateful for any advice or information which ensures that the
right box goes on the sleigh :-)

Thanks,

Eric

That is normal. The LO driver stage is running class A for optimum
linearity. Don't sweat it.

solid state aircraft rig made by symetrics industries of satellite beach fl. rig is comprised of three slide out drawers in metal case. whole unit is about the size of 2 boxes of poptarts stacked laying on their sides. on the rear there are 3 conections, an so239, a bnc and a canon plug. the drawers are labeled tower, atu, and control panel. the tower and atu drawers seem to be the radios. they are two chnl each, have the folowing controls...power,squelch,chnl swtch, mute and volume.

the control panel unit has the following controls...master power, mic cnctr, hds cnctr, and a rotary knob labeled pushout,inter,cockpit,atu,tower,aux.

it seems that its two radios in one box that are independent from each other and can be controlled through the "control panel" drawer. the control panel drawer allowing you to select what you want to hear and were to hear it.

the guy i got it from said he powered it up but i never did anything with it so i cant guarantee it works, therefore it goes as is. i have no further info on this unit, no books.

572B's? These commonly have been used in other rigs in lieu of 811/811A's. Can't speak specifically to Ameritron but when you look up the specs, it seems they would work (greater plate dissipation capacity).

2140. WTD: Regency RPH410 VHF HT programming info

Newsgroup: rec.radio.amateur.equipment
Date: 1998-11-22 00:00:00 UTC
From: mroberds@worldnet.att.net
Message-ID: <7390mh$igb@bgtnsc01.worldnet.att.net>
Source record: 125211
Cross-posted to: rec.radio.amateur.equipment,rec.radio.swap

Hello all!

Looking for programming instructions on a Regency RPH-410 handheld.
It's an older VHF handheld, 10 channels, LCD display, incandescent
backlight. 16-button keypad with 0-9, *, #, PRI, RST, SCN, RVW.
Takes an 11-volt 600mAh NiCd battery and the official label is
"Serial No. RPH410 12---" and "FCC ID: ARU9ZARPH410 Regency Electronics
Incorporated Made in Japan".

I have found a couple of toggle switches inside the radio on the
uP board, but I don't know what they do. They are both 2-position
switches. The radio works just fine now for both recieve and
transmit, for the frequencies that are in it...just wondering if
there is a way I can reprogram it.

Any help, tips, etc would be greatly appreciated. Thanks!

Matt Roberds

Source record: 125227

Hello. I would like to trade my BC895XLT for a clean PRO-2035. All I require is that the PRO-2035 works 100%, is at least 7/10 physically, comes with the manual, and comes with some type of power cord. My BC895 has no mods, has never been mobile, and I'm a non-smoker. It works 100%, and is a 9.5 cosmetically. The serial number is 75006197. Let me know if your interested.

The BC895 comes with all of the following:
-Mobile Mounting Bracket W/Box, Base Mounting Stand
-Original Box And Packaging
-AC Wall Adapter, Cigarette Lighter Adapter
-Telescopic Indoor Antenna
-Original Manual And 2 Frequency Guides

The BC895 is equipped with:
-Built In CTCSS, Hyperscan
-VFO Control, 300 Channels
-Bar Graph Signal Meter, WX Alert
-Trunktracking, Data Skip
-RS-232 Computer Control Jack

Message-ID: <739f52$aq0$8@callisto.clark.net>
Source record: 125229

Hello. I just got my MFJ-G5RV in the mail a few days ago only to learn that is is *EITHER* a 160m antenna, or a 10m-80m antenna. I had suspected that if you set it up a given way that you would be able to work 160m-10m, not either or. Anyway, I'm open to suggestions on a good 160m antenna. I would prefer a diapole-type antenna, but all suggestions welcome. Coax or ladder-line feed lines are fine. I don't have antenna restrictions, but I am limited in space due to trees so size is a factor. Any help is appreciated. Thanks a lot in advance.

2161. Adding Modules To TS-140S

Newsgroup: rec.radio.amateur.equipment
Date: 1998-11-22 00:00:00 UTC
From: Tony Heatwole <heatwole@shell.clark.net>
Message-ID: <739g1f$aq0$11@callisto.clark.net>
Source record: 125232

Hello. I know that, for example, you can add extra modules to a Yaesu FT-767GX radio to add V/UHF bands to it. Well, here's my question. Is there anyway to add any V/UHF bands to a TS-140S by adding additional modules? I know about the extended TX mod for SW, but I'm wondering if by adding modules you can add any ham bands above 50 MHz. And, if so, where would I get the modules and for about how much? Thanks a lot for reading, and thanks a lot in advance.

Source record: 125233

My Icom 706 is refusing to tnxmt on FM.

The antennas being used have been tested and are 1-1 SWR.

Coax has been checked and I have isolated the problem to be the radio.

Anyone with any ideas, please email them to me. I often work 6m FM on 52.525 so
I need to get it working again.

Thanks, Mark

> cable during a data transfer.

I can send you a .TPL file, and If you upload it to the FT50 it will
be "Kaput" :)))))

You can reset it, remove/reinsert the lithium battery, ... make what you
want, no chance :)))))

You will not be able to upload or do anything else, just a blank screen.

I have need 2 days without sleeping (2*24 hours) to bring it back to
life.

And you know what, just 1 (one) byte needs to be changed, ar 2 bits to
be more specific

This could happen, let's say not often, but it is possible.

> I disagree about the lack of utility of the ADMS software. Granted,

> handy repeater guide), and change the personality of the radio in a
> couple of painless minutes.

I agree 100%, the ADMS is OK, the FT50 has the error.

YAESU is not using some deacent protokoll like ICOM, Kennwood, or any
other, they are backing up the complete system area, and THAT is
DANGEROUS and WRONG.

> I do agree that it would be real nice if the manufacturers would release
> the details of the data transfer protocols, so that programmers could
> increase the value of these radios by making shareware, freeware, and
> low-cost alternative software available to the Amateur community. I

> built into the radio. But there is at least one programmer out there
> who has taken on the task of studying the data stream and decoding it

> so that he can write a Linux version of the software.

Riku Kalinen has (analysed and) published the protokoll a long time ago,
my version with my Software mods implemented will be out, lets say soon.

Any kid can write the Software, If I only had more time :)))))

I don't know much about the molex plug connection, but I did get a tuner module that used that plug from http://www.qth.com/BetterRF/ and it works just fine for me.

And if I can quickly give a positive "plug" for the company that sells it; within 3 days of ordering it (by phone) I received it by mail (very good, I'd say for a piece of equipment sent from New Mexico to B.C., Canada...). Sure beats hell out of some companies that I've mailoredered from, whose sales reps have garanteed that the product I want is in stock, and I still wait a month for.

I am trying to adapt a 733A to a 732A because there are no replacement 732A faceplates out there!
I'm not going to try to get the 733A faceplate to connect directly, only trying to wire it to run remote. One fellow is looking in his owners manual but says there is little useful info there.

Anyone out there have schematics, block diagrams and/or wiring information for the 733A and 732A,
especially as it applies to the remote wiring? These are obsoleted rigs and not supported by Kenwood (they are selling-off their remaining old stock of 733A faceplates and other old stocks).

Thanks for anything anyone can dig up for me. Kenwood has so far ignored my E-mail request for information ... :-(

Hi,
I have an excellent condition Kenwood TS-120S HF transceiver. For those that dont know, this is a 100 watt, all solid state (no tubes) digital readout HF rig covering 80 thru 10 meters (w/o WARC). Size is compact (about same as Yaesu 757, Icom 725 etc). Runs SSB and CW. Includes original boxes, owners manual, power cord. Works fantastically. Only a few surface scratches -- front panel is nearly mint. Not used mobile.

Also

Kenwood AT-120 matching antenna tuner -- tunes 80 thru 10 meters, with bypass switch. Also has back lighted VSWR meter. Sold in original box, with manual. Good physical, perfect electrical condition.

Also

Shure 444 desk microphone wired for the Kenwood HF rig.

Asking $375 for all, plus we split shipping cost. Contact me via email if interested. And as usual, your satisfaction or your money back. Net references available.

If that is what they call the "XTR" model, it requires Midland
programming software and a proprietary interface cable to connect a computer
to the radio.

Source record: 125291

I just aquired a machine I know very little about, other than it works and does a very good job. It operated as the MARS 2 meter repeater here in Panama for many years.

It is model number B93LPB-3100A. The entire rack stands about 6 feet tall and houses a RF Power Amp, Remote Control, Exciter-Driver, Receiver, and Power Supply. The stuff is in mint condition other than someone took the tubes out and never replaced them. I know that this model will put out 375 watts!!! It is crystal controlled and is currently set for 146.850 trans and 146.250 recieve.

I was just wondering if anyone has any experience with this machine and/or could tell me what it is worth. I am not looking to sell it...just want to learn some more about it.

Thanks

Has any one have any experiences with a Heath Kit SB220?
I think it runs 2- 500Z tubes.
Is it any good?
What should the expected output be?
Is this a clean amp?
What is the going price on these units?
Any information is appreciated.
Thanks

Hello,name is Dennis WY3F.
I have a Kenwood TM-v7a.
I am sure that i did this before,but I dont know how I did it.
I am trying to run packet on 2 mtr side in data mode,and on the Uhf side
I would like to talk at the same time on uhf while my packet is being
transmitted on the 2 mtr data side.
Maybe I am mistaken but I think this can be done.
If packet side keys the uhf side drops out ?
I looked through the manual and I cant seem to find the settings to have
them both TX at the same
time.
Any help would be greatfull.
Tnx 73 de Dennis WY3F....

Consider the Ten-Tec Omni VI. I have heard several experienced DXers
give it top marks for weak-signal work.

I've only used this rig during Field Day. It does have the quietest
receiver I've ever heard. At times I was thinking "the antenna must be
loose" when tuning dead spots on the high bands.

>No one gives a shit about some sniveling pecker-puffer who says otherwise.

Normally I would most heartily agree with your assessment Steve, but you must understand that when TPRS "says otherwise" to Hams using radio, they affect a lot of Hams who might have mistakenly thought that TPRS was an Amateur Radio organization. The name "Texas Packet Radio Society" is misleading in that respect.

I wouldn't call the TPRS guys "sniveling pecker-puffers" when "LandLine Lids" is much more accurate and to the point. I have left Greg Jones completely out of this discussion, and there's no need to bring him into it now. Although Greg still has a cadre of butt-kissers within TPRS, he is no longer an officer of that organization and hasn't been for several years.

Hams end up supporting TPRS, giving them their hard-earned cash, not knowing that TPRS will take their money and use it to work *against* Amateur Packet Radio networking, not for it as thier name implies.

Just setting the record straight, OM.

>
>>That's not the kind of people I would care to be associated with. I'd rather

>break...

Your lack of knowlege is sticking out, Steve.. Better tuck it in, old boy, and zip it up.

(Or at the very least, check your facts. I haven't worked with the LandLine Lid organizations in the last few years, but it's a big planet. Lots of legitimate Ham organizations to work with, and no need to "rub elbows" with geeky lids in order to participate in them. I've been active, but only with legitimate Ham organizations.)

>>I am a Ham Radio Operator, and not a "digital communications hobbyist", so
>>it
>>would be a waste of my time (not to mention the slur on my character)

>
>There's more to life than Texas Hams. Find another group, make Ham radio
>proud of your accomplishments.

Yes, that's exactly what I have done, and it's worked out pretty well. It's nice working with competent Hams, instead of the geeky Lids infesting TPRS.

It's plenty worth it if you have a radio such as a GE Master II. They
modify really easily. And they work VERY well.
The smaller compact under dash radios, like Motorola Maxtracs are definately
not worth the effort.

> Is it worth the effort to do this???

Hi Don:

Yes, some can and some cant. Unless I'm mistaken the true definition of a tranciever is that is shares the IF for both transmit and recieve in which case it's a little more difficult to separate them. Many of the older commercial VHF/UHF rigs actually had a completly separate transmitter strip and reciever strip in one box making it in reality a TX/RX pair but of course referred to as a tranciever. There are quite a number of repeaters using this very sheme, take one tranciever apart, split it, xtal it up for the appropriate frequencies and then add a controller, duplexer etc. Sure you could modify it to run as a repeater and probably keep it in the same box. Remember the key to being able to transmit and recieve in the same band at the same time lies in how well you can tune the reciever so that it only hears the recieve freq and not the transmitter 600KHz away. This is why duplexers are used, they basically provide the reciever with a very very sharp front end allowing only the desired freq to pass and filtering the rest. Think about trying to hear your buddy on 146.52 a mile away on a rubber duck and there is a guy 10ft away transmitting with 100 watts a few kilohertz down the band, your poor reciever doesn't stand a chance without the help of a good filter notching out the 100 watt transmitter. It's like trying to see a lit match in front an automobile headlight.

Worth the effort?, that one is your call. It can be a lot of fun to build a repeater from scratch by doing what your describing but it IS a lot of work not too long ago it was the only way to build a repeater, no one had them off the shelf as they do today.

Tim, ka8ddz

Given the 5 watt limit on CB, isn't 5,000 Watts a bit of overkill!!!
It's only just 1,000 times OVER the legal limit. Given the amount
of power you'd be putting out, it would be hard NOT to be noticed
by the FCC once you splater all over the bands. The FCC has started
cracking down on several problem stations lately. Fire up your CB
rig with 5 KW and you could be next...

Source record: 125048

Greetings,

Just bought a refurbished Hallicrafters SX-71. It's running very nicely, but has some paint missing across the top and around the bandspread knob. All it needs is a better looking front panel to make it look as nice as it sounds. Got a panel to sell me? Pretty please? Sugar on it? :-)

Or, if you're someone who repaints and re-labels tube radios, I'll consider having the work done. Please send me information about that.

Or, we can trade your repainted front panel for mine and cash. This is a lovely radio that only needs one more piece to be perfect. You know!

If you can help, please send email to: ajninno@syr.edu

Thanks for listening...

Anton

The answer is a definate Yes and No. It depends on the transceiver. Many ham repeaters are made from old commercial transceivers. Examples are GE Mastr II, Motorola Mitrek, Motorola Micor etc. Most ham transceivers are not modifiable this way.

Remember that once you are done modifying the radio you only have the easiest and cheapest part of a repeater. You then need to add duplexor, power supply, battery backup, feedline, antenna, and last but not least the site (which is the most important part of all!).

Source record: 125050

Not long ago I noticed UPS misrouted a ground shipment that was being shipped to my home. It was a Cleveland to Louisville shipment and it ended up in Florida. I noticed this and called UPS to suggest that they had messed up, and requested that they put it on a plane to get it to me, as a customer service olive branch, as quickly as possible.

UPS's response was that, "it was shipped ground, so it will remain ground, no matter how far off course it ended up, nor how long it may take to get it to me."

This package ended up getting to me about one week later than it should have. When I complained about the lengthly shipping time that exceeded their standards, they replied, "their standards only apply to business addresses, so they were satisfied with their handling of my shipment, and what I thought didn't matter."

UPS, you have lost my business, as long as I have a say in how something is shipped.

Sincerely,

Jim Temple

The Texas Packet Radio society will be holding the 1998 Fall Digital Symposium
on Saturday, December 12th, 1998 at The University of Texas, Austin. It will
be in room 240, Sanchez education building starting at 8:30 AM. Details, maps,
etc. can be found on our web site: http://www.tprs.org This year, there will be
4 sessions. There will be a tutorial session on 'LINUX and networking'. Also,
demonstration of LINUX on an IDE-compatible FLASH card (boots really fast). There will be a report on the TAPR FHSS radio - there is a
TCP/IP stack operational on the radio itself.

--------- Agenda ----------

Friday night, Dec 11th 7:00 PM+ Dinner at Sholz Garden, Austin

Saturday, December 12th UT Austin, Room # TBD

Session I. Tutorials 8:30 - 9:30 AM
A. Linux systems -Stu Green
* Setting up Linux as a gateway router.
* How to setup routing tables, default routes, etc.
- Static vs. dynamic addresses, class-c addresses, etc.
* Tunnels - what they do, how to set one up.
* Proxies / IP address masquerading
* Slip and PPP on serial interfaces
* Ethernet interfaces

Session II. Project Reports 9:45 - 12:00
A. FlashCard OS Project - John Koster, W9DDD
B. FHSS radio project status - Tom McDermott, N5EG
C. TexNet - APRS capability, AX.25 tunneling - Bob Morgan, WB5AOH
D. ISP interconnection project - Joe Borovetz, WA5VMS

Lunch 12:00 - 1:30

Session III. Operational Issues 1:30 - 3:00
A. BBS, DXC - David Wolf, WO5H
B. APRS - Mike Heskett, WB5QLD

Session IV. White Paper brainstorm session 3:15 - 5:00
Greg Jones, WD5IVD - discussion leader
Purpose is to define a white paper that can be used as a guide to advise

people
how to safely setup a gateway including routing, maintenance, and
administration
for IP interconnection arrangements. The interconnection arrangements
that this
paper should cover include:

- AX25IP tunneling
- Spread spectrum radio interconnection to an ISP
- Straight and Masqueraded addressing
- Dynamic and Static addressing
- VPN (Virtual Private Networking) for closed tunnel groups

>Any thoughts on what would be the smallest and lightest (commercially
>made) AC power supply that I could use for portable operation with my
>(25w) Radio Shack HTX-100 10m transceiver?
>

I use a Radio Shack 13.8 V 3 Amp power supplu (Catalog # 22-504). It perfectly powers the unit's 25 watt transmitter (especially considering it's SSB and not AM mode). Right now RS has them on sale for $32.98 (down from $39) I've also used a portable Car Battery Starter and works great as well.

Good luck, 73

Hello All,
I am around electric vehicals when they are being serviced on a
regular basis and have noticed that the higher rated quality batteries
are heavier, I have applied this knowledge when buying alkaline
batteries for my Pro-51. I have found this to be correct when I
noticed the heaviest of the AA's to be the house brand at Pic N' Save
stores. At 89 cents for four they seem to outlast even the duracells.
'Just my observation....

Might try running the diagnostics on the floppy that came with the opto board. Look in the 0S456 subdirectory. Run the program and see if you can get the board to sing. You can toggle the comport, baud rate, freq, etc. Just a thought...

Yes you can it is available from R T Systems who authored the ADMS
software. It consists of an adapter for the older 3 connector cable to
the newer 4 connector cable as well as new software. They get $20 + $6
shipping for the upgrade. The new software will easily import files
from your previous HT I transfer data between my FT-51 and VX-1 files
seamlessly.

> ground like it was shipped. Is that dumb or what?

Bruce,
It's really dumb. However, I have come to expect irrational business practices from UPS. They have once again made it quite clear that they do not to service the general public.

I used to ship many packages a week thru UPS, until they implemented their 100% inspection policy of packages containing electronic equipment dropped of at the counter here is Seattle. They now insist that the item be packed in the original manufacturers packaging, or they will refuse to accept it. That is unless you are a commercial account, then you could ship it packed in rocks and they would take it. I now ship via USPS and find their rates to be competetive if not lower than UPS.

I also just recieved (15 minutes ago) a package that was shipped via UPS on November 10, 1998 from New Jersey. Thats 13 days!! They promise 5 working day service for packages shipped to a commercial address in the Seattle area from New Jersey. Unfortunately, this one was shipped to my home and they do not provide any delivery gurantee for residential service. Very poor service.

I will no longer ship via UPS, and I will instruct all my vendors to ship by one of the many other carriers available when they send packages to me.

UPS.. you have a great going out of business plan. It's a good thing we don't need you.

Regards,
Richard
A former UPS customer.

That voltage differential is a fairly common situation.

The National Electrical Code requires that you "bond" those two grounds together. And it is a good idea. To suit the Code, you must use a wire of the same gauge as the wires that feed your electrical service panel from the mains out in the street. That is usually pretty hefty wire (#6 or #4).

My blanker takes out pulse noise - BUT, it can make the receiver sound lousy. Using the NB admits adjacent channel interference all over the place. If you cut the aggression of the NB back, it is better in the audio department (internal adjustment).

2242. Re: TPRS Fall digital symposium - Dec 12th

Newsgroup: rec.radio.amateur.equipment
Date: 1998-11-23 00:00:00 UTC
From: Charles Brabham <n5pvl@texoma.net>
Message-ID: <73csft$hug@enews2.newsguy.com>
Source record: 125078
Cross-posted to: rec.radio.amateur.digital.misc,rec.radio.amateur.equipment,rec.radio.amateur.homebrew

Don't wate your time with TPRS's digital symposium... It's is rip-off, run by folks who intend to destroy, not build the packet radio network.

These morons actually plan to shut down working packet radio networking, and replace those nodes with Internet connections.

TPRS, (Texas Packet Radio Society) has recently come out of the closet as a Non-Ham organization. According to the TexNet network manager, N0CCW, only the name has anything to do with Amateur Packet Radio. TPRS is not, in fact, an Amateur Radio organization no matter what it's name may imply.

It's ironic but true that if you want to support Amateur Packet Radio in Texas, The "Texas Packet Radio Society" is the very last place you should consider sending your money. They are not interested in building an Amateur Packet Radio network at all.

Take a look at the May '98 issue of TPRS's "Q-Report" to see what I mean.. No mention of packet radio, except how it's somehow just not good enough.. The bulk of the newsletter is dedicated to the "great challenge" of abandoning Amateur Radio so that all of TexNet's nodes can be linked to each other by the Internet instead. - Along with an implication that in the near future, TexNet nodes without good *Internet* connections will be phased out of the network altogether. I know that many of the TexNet node-ops are real Hams, and these appear to be the ones TPRS intends to edge out.

What kind of an organization would deliberately plan on edging out Hams using
Radios in favor of "digital communications hobbyists" using The Internet, or "wirelines" donated for the purpose by commercial communications outfits? Why TPRS, of course. - The worst enemy of Amateur Packet Radio in Texas, and the best friend of the commercial communications outfits who would love to grab up our spectrum.

When irresponsible "digital communications hobbyists" go out of their way to undercut our use of Radio by Hams, imposing instead an unseemly dependence upon Non-Ham means of communication, they leave all Hams wide open to attack by commercial communications outfits who covet our bit of spectrum. " Why do they need (Insert Band here) if they prefer to use the Internet anyway? " -- A very good question!

Why, I wonder, is the "Texas Packet Radio Society" so cozy with commercial communications outfits, constantly pushing Non-Ham means of communication while distancing themselves further and even further from Amateur Radio and their fellow Hams?

That's not the kind of people I would care to be associated with. I'd rather work with Hams. - Real Hams who want to see Amateur Packet Radio advance and grow.
A few members of the isolated, insulated little clique that has controlled TPRS since it started are of a mighty high opinion of themselves.. They appear to believe that if THEY cannot figure out how to surmount a problem, then of course nobody else ever will or could either, and that the best policy for all Hams is to "be realistic" and give up on Amateur Radio right now, in an organized fashion.

In fact, most of the innovation and industry recently associated with the Texas Packet Radio Society appears to have been in that very direction; Leading Hams to abandon Amateur Packet Radio networking in favor of Non-Ham means of communication.
N0CCW was giving us the straight scoop when he said that TPRS is not an Amateur Packet Radio organization. It appears to be the exact opposite.

This is why roughly half (over 1000 miles) of the current Texas TexNet "Packet Radio Network" is actually donated wireline links. They claim to be the biggest Amateur Packet Radio network... Well, remove the 1000 miles+ of Non-Ham links and all of a sudden they are running a distant fourth place. Still impressive, but not for long if TPRS's newsletter can be believed. They appear to be ready to deliberately phase out the use of Amateur Packet Radio soon, so that TexNet will no longer be an Amateur Packet Radio network at all. -- And they look forward to that as "progress" ?? ! ??

I guess it may be "progress" for the isolated/insulated TPRS clique, but it sure isn't good news for Hams, whether they live in Texas or not.

When "Digital Communications Hobbyists" (Packet Hackers) route Amateur Packet Radio network traffic over the Internet, they directly undercut the essential reason for allowing Amateur Radio operators the stewardship of our bit of spectrum in the first place.
They cut the throats of all of their fellow hams in the eyes of Congress.

Additionally, simulated "packet radio networking" using Non-Ham means of communication only serves to displace and replace genuine Amateur Radio networking efforts. - It edges out the Hams.
The president of TPRS, Tom McDermott N5EG, does not appear to be content with the speed at which Hams are being edged out of the packet net in the U.S., and is doing what he can to accelerate the process.
What a guy.

When the Hams in Texas decide they would like to initiate a new, REAL "Texas Packet Radio Society", which clearly states in it's charter that the organization is dedicated solely to advancing Amateur Packet Radio, I will be glad to participate.

TPRS's charter does not call for dedication to Amateur Packet Radio. It is a "digital communications hobbyist" organization instead, which explains why TPRS has had no problem in turning against Texas hams, working to destroy
Amateur Packet Radio networking in Texas, and replace it with an utter

dependence upon Non-Ham means of communication. (Internet, Wirelines, ect..)

I have too much personal pride as a ham to associate myself with a Non-Ham organization like TPRS, or the "Non-Hams" who run it. When I want to use the Internet, I dial up my ISP. When I want to utilize Amateur Packet Radio, I use radios. I will not associate myself with persons who cannot comprehend that simple distinction, and who show no respect for Amateur Radio and their fellow hams.

I am a Ham Radio Operator, and not a "digital communications hobbyist", so it
would be a waste of my time (not to mention the slur on my character) if I were to participate in the activities of TPRS.

If "digital communications hobbyists" are starting to take over YOUR Amateur Packet Radio organization, take a hint from the state of Texas, and weed them out right now. You'll be glad you did, and you'll be sorry if you don't.

Thanks for taking the time to look and think this over.

Don't waste your time with TPRS's digital symposium... It's is rip-off, run by folks who intend to destroy, not build the packet radio network.

These clowns actually plan to shut down existing packet radio networking, and
replace those nodes with Internet connections.

TPRS, (Texas Packet Radio Society) recently came out of the closet as a Non-Ham organization. According to the TexNet network manager, N0CCW, only the name has anything to do with Amateur Packet Radio. TPRS is not, in fact, an Amateur Radio organization no matter what it's name may imply.

It's ironic but true that if you want to support Amateur Packet Radio in Texas, The "Texas Packet Radio Society" is the very last place you should consider sending your money. They are not interested in building an Amateur Packet Radio network at all.

Take a look at the May '98 issue of TPRS's "Q-Report" to see what I mean.. No mention of packet radio, except how it's somehow just not good enough.. The bulk of the newsletter is dedicated to the "great challenge" of abandoning Amateur Radio so that all of TexNet's nodes can be linked to each other by the Internet instead. - Along with an implication that in the near future, TexNet nodes without good *Internet* connections will be phased out of the network altogether. I know that many of the TexNet node-ops are real Hams, and these appear to be the ones TPRS intends to edge out.

What kind of an organization would deliberately plan on edging out Hams using Radios in favor of "digital communications hobbyists" using The Internet, or
"wirelines" donated for the purpose by commercial communications outfits? Why TPRS, of course. - The worst enemy of Amateur Packet Radio in Texas, and the best friend of the commercial communications outfits who would love to grab up our spectrum.

When irresponsible "digital communications hobbyists" go out of their way to undercut our use of Radio by Hams, imposing instead an unseemly dependence upon Non-Ham means of communication, they leave all Hams wide open to attack by commercial communications outfits who covet our bit of spectrum. " Why do they need (Insert Band here) if they prefer to use the Internet anyway? " -- A very good question!

Why, I wonder, is the "Texas Packet Radio Society" so cozy with commercial communications outfits, constantly pushing Non-Ham means of communication while distancing themselves further and even further from Amateur Radio and

their fellow Hams?

They don't make the paper Callbooks any more, but I have a couple
available.

1994 North American $ 15

1991 North American $ 15

Both of the above are "like new," left over from when we were selling
them new. They have been opened up, but that is about it.

1990 North American $10

1990 International $ 10

These two have been used. They show their use, but are not "beat up" or
damaged.

Prices do not include shipping from Florida.

Thanks.

As others will tell you , It depends on the radio. If it is an older ham rig or comercial transciever that normally has a crystal controlled receiver and transmitter you may be able to do it. The receiver and ransmitter has to be two seperate pieces. I have converted a GE Mastr II mobile unit with no problems. Also an older Clegg FM-76 220 MHz unit. That was a little harder as some of the circuits for both sections were on one circuit board.

The worth the effort will have to be determimed by you . Outside of the controller, duplexer and antenna, you will not have too much trouble with the radio part of the conversion if the correct transceivers are picked. Do not try to convert most of the modern rigs as there is too much interconnected stuff on the boards and some of the receive and transmitt circuits are in use at the same time.. Well maybe need to be used at the same time and you can not do that.

An additional note Don, if your still in the learning stages but have an interest in VHF or UHF communications I highly reccomend building a kit. Look in QST or 73, if you can spring for the hundred bucks or so there is a company called Hamtronics I believe that makes reciever and transmitter kits designed for this type of service, or try one of the Ten Tec 6m or 2m trancievers. I only wish I had built more when I was a Novice 20 years ago, it will increase your knowlege of radio and how things work at an exponential rate! IMHO...

Source record: 125092

I just found the Cathode metering resister in my 520s open. It is a 10 ohm 10 watt resister. The schematics call for 2-10 ohm 1 watt resisters in parallel instead. my question is should I replace it with 2-5 ohm or a 10 ohm as found? I have a 10 ohm 1 watter in as a temporary replacement until I can get to the parts store and it seems to work OK.

If you are measuring the voltage difference between ground and the neutral at the shack outlet neutral, and the circuit is loaded to any degree, that level of difference isn't a problem. If you were to get that difference measuring at the neutral bus in the panel and the ground, that could be indicative of a problem. NEC requires that all grounding electrodes be bonded together. If you have driven a ground rod for your station ground, the largest copper wire you would be required to use would be a #6, regardless of the wire size used for your service conductors.

>Has anyone gotten the subject radio to function as a cross band
>repeater?

Yes. I often use it that way when I take m y walks in the early AM. I use my FT-530 and the V7A either in my car or in the shack on the vertical at 50 feet. It works great!

We have a small round table each morning on 146.400 MHz simplex. I can check in wid my HT on low power and get great reports from Sullivan IN about 30 miles away.

I just followed the method described in the owners' manual.

Im still in the learning stages, so please no sarcastic answers.
Can a Transceiver radio be modified to serve as a full repeater.
(transmiter & receiver)
or in simple terms, can it be modified to recieve & transmit at the same
time??????
Is it worth the effort to do this???

Greetings,

Discovered that I have a voltage differential between my house neutral and station ground. I see almost 2 volts AC between the two. This causes a number of ground-loop problems between equipment. Can I fix this by tying the house ground and station ground together? Any other ideas?

From: "Vax B. Uster" <vaxb@sgi.net>
Message-ID: <3658F1F4.2A8D9ED4@sgi.net>
Source record: 125103

Although I would have recommended the TH-79 as the best choice, if it is out of your price range, I'd suggest next the IC-W32A. I haven't seen the G71A yet - but my friend has the W32A, and I've played with it. I haven't used it extensively, but from first impressions, it definitely looks like a nice rig. He is real happy with it and has had it for about 6 mos.

The smart lock is nothing more than a toggle switch that keeps the tuner
from retuning it self. You can make one with a small box and a SPST switch.

>that if you set it up a given way that you would be able to work 160m-10m,
>not either or.

The standard 102 ft. G5RV acts as a random length wire on 160m when
you short the two sides together at your tuner. Should be a simple
project to make a short piece of coax that will accomplish that for
you, which you could feed into the random wire side of your tuner.
You could even go so far as to use a 2-position coax switch so you can
select between the normal connection and the shorted one.

Or you could take the coax feeder off of the G5RV, and instead run
ladder line all the way to the tuner (assuming the tuner has a
balanced output) and when you want to work 160m, simply short the two
sides of the ladderline together where they feed into the tuner and
feed it as a long wire (read your tuner manual to see how a long wire
should be hooked up).

In any case, you'll need a good station ground to feed against, and
you may have problems with the radiating element coming all the way to
the shack.

But you can accomplish 160-10m operation with your existing antenna.

>Anyway, I'm open to suggestions on a good 160m antenna. I
>would prefer a diapole-type antenna, but all suggestions welcome.

There are larger versions of the G5RV, and RadioWorks sells a "shorty"
version that is purported to cover 160-10m - see www.radioworks.com

For Sale: 2M (50 watt) Linear Amplifier and pre-amp

This amp is just over one year old and is in excellent condition. The current list price for the amp is $119.95 at AES (which is where I bought it). I am willing to sell the amp for $70 or best reasonable offer. I got my amateur radio license a while back and have just gotten out of the hobby for one reason or another. Please let me know if you have any questions or are interested. I'd be more than happy to answer any questions you may have. Please feel free to e-mail me at: mnicolia@greenapple.com

Model: MH-A103 (Maha)

This amp is designed for use with any VHF band handheld or mobile transeiver with an RF output power rating of 2.5 to 5 watts to increase it's output to a nominal 50 watts and has a built-in GaAs FET receiver pre-amp.

Features
----
* 50 watt output with 2.5-5 watt input
* Low noise pre-amp
* Dual Mode (FM & SSB)
* SWR protection circuit
* Reverse DC power polarity protection

Specs

Frequency range: 144-148 MHz
Modes: SSB/FM
Input: 2.5-5 watts
Output: 50 watts
Receiver gain: 18 dB
Impedance: 50 Ohms
Connectors: Type M (SO-238)
DC Input: 13.8 Volts
Current Drain: 8 Amps (max)
Dimensions: 5.3" (W) x 1.7" (H) x 6.3" (D)
Weight: 2 lbs

There is more information about this product at:

http://www.maha-comm.com/products/poweramps/mh-a103.htm

Please contact me if interested (mnicolia@greenapple.com).

Actually Mr. Dickson makes a very good case for my not using my real
name. If some huge Neanderthal is going to attack you physically for
having an opinion he disagrees with why would any thinking person use
his real name and/or address.

Ham radio on the lower bands and in the news groups seems to be
dominated by trailer-trash bullies whose first reaction is to threaten
violence, what a wonderful hobby this has become.

Bored of Bullies

You can take the boy out of the trailer but you can't
take the trailer out of the boy.

Conections in order:

Radio electrical ground - volts
Radio DC hot + volts
Output to activate tuner
Keys the radio

Contact Gary Fibre at Icom for details I made the Alinco tuner work
using the above and some slight tuner mods.

2285. Receiver specs...

Looking to buy myself a new radio as a personal Christmas present this Christmas to replace my trusty ole 990 and would appreciate some advise and comments -

I work almost exclusively weak station dx (cw) and seldom if ever use SSB. Receiver sensitivity/selectivity and quality filtering in a rig is paramount to me. SSB audio output quality and power output (while important) are secondary...

In looking over the specs for the Yaesu 1000MP and 920, the 920's sensitivity is rated at .13uv while the 1000MP is .25uv - ?? What am I missing?

Also, the ICOM 746 or 756 receiver specs are looking very good to me - with sensitivity being <.16uv for the 746 and .15uv for the 756...

Comments? Suggestions?

Thanks - here or E-mail as you choose....

John

_____ I believe NEC requires that all grounds be tied together to equalize the potentials and thus makes any path equal in stead of the least resistant path the course that is followed.

If you do not have a separate grounding rod it would be a good idea. I tried to follow most/all of the theory and recommendations when installing my HF station when first lisenced to use HF and when I mentioned about doing a grounding rod an EEE guy tried to dissuade me by invoking the reference to ground wire lengths being fractions or multiples of a wave length and that the signal could wind up going on the ground wire or even biting me on the control knobs. I did the grounding rod anyhow and have been better off for it.

In the end real life trial and error is worth more than just worrying about theory. The exception is when you stand in water and turn on the juice.

My 706MKII noise blanker has no effect whatever on ignition impulse
noise in my pickup. I'm going to take it into the dealer to see if it
needs adjusting or whatever.

My company makes PC-based DSO's. If the driver already has a laptop they
will be very cost effective.

Simple/custom software can be written to make it easy for the driver to
operate. You could take advantage of the PC and log data to disk, load
old capture files and compare signatures, email data files back to the
home office, etc..

Get a FT-1000 or FT-1000D. These are very good. Low phase noise and high dynamic range. No filter blow by. Stock SSB filter shape factors measured at better than 1.3:1. Combine with a JPS-NIR-12 for 50 Hz CW bandwidth and you will have a very good combination. NIR-12 also very good for SSB. I have this setup (1000D+NIR-12) and it is very good.

There is MUCH more to a receiver than sensitivity.

Ken,
Congratulations on passing the test! You'll receive your license
in a few weeks, or you might even be able to find out your new call
sign on the FCC's web page in a week.
If you can, before you buy any radio, consider dropping in on an
amateur radio club near you. The ARRL (http://www.arrl.org) can help
you find the nearest club. These are the people that can tell you
what frequencies are most active in *your* area. There's no point in
buying a 2M HT if there's no repeater near you, or most of the locals
use 440 or 220 or whatever.
In case you can't find a local radio club, it's *usually* a good
bet that 2M is the most active band. You might consider a mobile rig
instead of an HT if (1) you have a car and drive a lot, or (2) you
live in a very rural area and the repeaters are some distance away.
Mobiles puch out more power, so can reach much further than can an HT.
Personally, I prefer an HT, since I can take it wherever I go, whether
I'm in my car or walking, biking, skiing or whatever. The lower power
of an HT means, however, that you'll not be able to reach distant
repeaters, and you may sound a bit weak into others you can reach.
I would suggest you consider buying a used Radio Shack HTX-202
as your first radio. They typically sell for $80-$125 (depending on
condition), and will give you fine 2M performance. The filtering
on a 202 is the best in the industry, so these are fairly resistant
to intermodulation (terrible interference noice coming from pager
transmitters and the like). I'm sure there are other HT's that are
also recommended; hopefully other hams will tell you about them.
Good luck, and welcome to the hobby! I've enjoyed it, and I hope
you will too.

Hi Tom

Icom IC-706 to AH-3 Auto-Antenna Tuner, control connections:

1. TKEY: low if the tuner is not connected,
the <TUNE> button is not functional; high
Rear panel view: if the tuner is connected. On receiving
a TSTR signal, the tuner may assert TKEY
1 2 3 4 low to key the transmitter.
_____ 2. TSTR: normally high; pulses low twice
/ | when the <TUNE> button is pushed and held
< O O O O | for 2 seconds to start the tuner; pulses
_____| low once when the <TUNE> button is pushed
momentarily to stop or bypass the tuner.
3. +13.8V @4A: switched by <POWER> button.
4. 0V: chassis GND.

Best Wishes

I have the following Drake gear For Sale. This is my personal gear, and has
been operated at my station in the past year. All items are PICK UP ONLY,
unless otherwise stated. I am located near Raleigh, NC, and will drive a
reasonable distance to meet someone.

DRAKE C-Line

R-4C SN: 16749 (four filter position)
Very Good condition
No extra filters or NB.
Extra crystals for 160, 17, 12, and 10(28-28.5)
Original Manual
Cabinet in good condition only one small scratch on top left front of
cabinet, not deep.

T-4XC SN: 29167
Very Good condition
Very good finals 190W input on 80
Original Manual
Cabinet in Very good condition only small rub marks

MS-4 Speaker
Very Good condition
Very light scratches

AC-4 Power supply
Very Good condition

No interconnect cables with this station, or boxes.
Price PICK UP ONLY: $400

Also For Sale the following items. I will ship at buyers expense.

Drake MS-4 speaker
Fair-Poor condition
No feet, scratches in cabinet small ding on left side. but hey, it works,
and with a new paint job could look good.
Price: $20

AC-4 Power supply
Good condition works fine Appearance is fair
Price: $65

Thanks and 73

2317. Old police motorcycle radio wanted

Newsgroup: rec.radio.amateur.equipment
Date: 1998-11-24 00:00:00 UTC
From: Mark Masa <mark@kelltech.com>
Message-ID: <365AF562.65C9F7E7@kelltech.com>
Source record: 124896

I'm looking for a radio setup that was used on Harley Davidson police motorcycles during the late 40's through the 50's. It consists of two boxes (one power supply and one reciever/transmitter/amp), the handlebar mounted speaker and the tank mounted hand microphone. The boxes are aprox. 20"x10"x10" and were painted black. I need this particular vintage for a bike I'm working on now, but am interested in just about any police motorcycle radio. Please email me at mark@kelltech.com
I hope somebody can help me.

> 73's
> Stan (530)241-0843

Hi Stan OM,

Not being familiar with a product named "Pride KW ONE", but I must question the power level with a single 4CX250B tube, which has a max plate dissipation of only 250 watts. In order to output 500 W PEP, most linear (Class AB1) tube amps would require about that much plate dissipation, or 500 watts. Even if it was a class C amp, with 75% efficiency, it would still be only a 333 watt output amp. At 500W out, you would have twice the plate dissipation available from the single 4CX250B. Looks like a bit of marketing hype on those specs. You have a 250-300 watt amp.
Be advised, one can buy a real 2KW amplifier, the Heath SB-220 (with 1KW plate dissipation) , for under $500.

73 and GL,
Don, W6JL

2327. Re: Help: Need TS440S Info

Newsgroup: rec.radio.amateur.equipment

2328. Re: Looking for Knife Switches

Newsgroup: rec.radio.amateur.equipment
Date: 1998-11-24 00:00:00 UTC
From: Charles Elbel <celbel@ctesc.net>
Message-ID: <365B31A2.4C55@ctesc.net>
Source record: 124907

if you are looking for something substantial, talk to a utility crew
that you find working out in the country. sometimes they replace older
switches ans when they remove a feeder from service they take those
switches to salvage sometimes. best bet is to find a little country
electrical co-op and talk to the work supervisor. tell him you are a
ham
and you want to make a good ground switch. (the country folks are a lot
more helpful sometimes).

> A former UPS customer.

Richard:

Is does seem that since the highly politically motivated and manipulated and largely dishonest strike (led by a man who has been barred from union leadership) that UPS has done nothing but get worse and worse.

Package handlers seem to be damaging more packages, prices seem to be rising, delivery times seem to be longer ... all of this is anecdotal, but I too have switched almost exclusively to USPS with good results.

FedEx tends to be too expensive and RPS has a worse reputation for breakage than UPS!

IMHO ... 73, DavidC AA1FA

2331. HELP! Need mod for IC-T2A

Newsgroup: rec.radio.amateur.equipment
Date: 1998-11-24 00:00:00 UTC
From: John Smith <johnsmith@microsoft.com>
Message-ID: <73f697$1h0$1@dns2.serv.net>
Source record: 124910

Hi all,

I have looked everywhere that I can think of for a mod for the IC-T2A.

I am a hang glider pilot and would like to be able to tx on 151.625 -
151.955 (USHGA frequencies)

I spoke to tech support at Icom, they said that there is a mod which
involves removing a diode but couldn't give me the details.

Myself and at least one other person would greatly appreciate information on
how to do this mod.

Thanks in advance,

Rich

The extra digit is covered in the owners manual, I don't remember the
number for wideband mod though..

KENWOOD TS-440
West,Gordon: "Kenwood 440 Modifications" _Popular Communica-
tions_, October 1987 p. 62.
Illustration captions:
1. Remove 17 screws holding on the bottom and top covers. The bottom
cover comes off, and the top cover is carefully removed and put next
to the radio. It is till connected via the speaker wire.
2. Gain access to the front of the unit by removing two top side
screws and loosening two bottom side screws. This allows the front
assembly to swing open.
3. Remove the shiny silver control board protection plate. This
requires removing two screws on the top and three screws on the
bottom. Lift the plate out completely.
4. Locate diode D-80 in the bottom left-hand corner. Snip it for
all-band transmit.
5. Now locate D-66 and snip. It adds 10 Hertz readout to your
digital frequency display.
6. Carefully reassemble the control plate using a magnetized tiny
screwdriver to hold the five tiny screws in place. Don't pinch any
wires. Also, close up the front and replace the top and bottom covers
with 17 screws.
7. Connect power. Depress A=B switch and turn on the power
simultaneously. This resets the microprocessor for all-band transmit
and 10 Hz frequency display.
This article also tells how to increase the power of the TS-440 by
adjusting the internal ALC control. The procedure is applicable to
other rigs.

2348. my two bits on `parasitics`

Newsgroup: rec.radio.amateur.equipment
Date: 1998-11-24 00:00:00 UTC
From: Peter Shintani <shintani@funtv.com>
Message-ID: <365BAD02.C0F6F8BF@funtv.com>
Source record: 124927

hi:
Just my two bits regarding `parasitics` or in other words un-
explained discharges in a vacum tube.I am not knowledgeable on vacum
tubes but I do have some TV experience. I am an electrical engineer, and
I have worked in the electrical product design group of a major TV
manufacturer for over ten years. My experience with CRTs might be
interesting to some.
We have a reliability test call the `laser arc discharge test`.
A crt can have about 30kV across it and may have a capacitance of up to
about 3000pF. CRT`s are known to spontaneously discharge, and deliever a
peak current in to the thousands of amps, if no current limiting
measures are taken. The laser arc test, is done to force a discharge in
a crt by vaporizing the surface finish of the electron gun with the
laser. Vaporizing the phosphors can induce a discharge just as easily.
The vaporized metal provides a discharge path, the crt discharges
violently and the reliability testing of the TV set can be performed in
a reasonable length of time.
Perhaps what some people claim are parasitics in a tube linear amp,
may be just a spontaneous discharge inside the vacum tube due to some
dirt or loose particles inside the tube just as in a crt.

2349. Re: winshield glue-on antennas

Newsgroup: rec.radio.amateur.equipment
Date: 1998-11-24 00:00:00 UTC
From: HP Authorized Customer <joe@user.com>
Message-ID: <73eec6$b8k$1@fnord.systemsoft.com>
Source record: 124928

I used to have an Avanti through the glass on my GLH-Turbo. It
actually worked fairly well, or so I thought, until my IC-27a cooked
a final. I replaced it, and a few months later cooked a second
final. The SWR was still fine, a very good match, and I blamed
the connectors. So I converted the radio to the chasis mount
BNC as recommended by one of the clubs. Well, it cooked out
a third final, so I left an SWR meter in line.

Low and behold, my 'perfect' match in the driveway was no such
thing at 75mph! It was pegging the meter up above 75, and even
at 60 was somewhere up around 5:1 or higher.

So I tied fishing line to the antenna tip, and keyed the radio in the
driveway. The FLEXING of the plate against the glass was the
culprit. I called Avanti and they sent me about a half dozen
'remount' kits for free. I remounted the antenna, and the SWR
stayed flat under more pulling than the antenna would exhibit
at 145mph (don't ask!).

The original mount was about two and a half years old when
the problem initially showed up. But I had mounted it in Texas
when I lived there, and the problem showed up after about a
year in New England. The remount lasted another year and a
half with no problem whatsoever. At which point, I traded the
car and gave the antenna to a friend who wanted it.

They're pretty strong, just like a cellular antenna. It's important to make sure the glass is really clean, on both sides, and that you don't have any window tinting film on the glass. Then make sure you apply it when it's not too cold, or hot.

It performs pretty much like most other mid-range receivers with
its stock filter. I imagine that the narrow SSB and CW filters will
help it somewhat, as they have in my ham rigs past. Just bought
a 706MkII this past weekend, and really like the thing. But, yes,
it is a bit wider than I like so I will probably end up with one of
the narrower filters.

Bill: What adjustment changes the NB performance?
I haven't gotten around to ordering a service manual
yet on my set.

I think the normal transceiver can not be a repeater,transmitter and
receiver are working on the same time, the working condition have two,the
first is,you transceiver have two bands(like VHF & UHF),and TX on VHF,RX on
UHF,But this is not a good idea,
the users of team need to use two bands portable radio or mobile radio,when
user are talking to somebody from repeater,then must turn off the receiving
band's volume knob(sometimes you must to check this receiving
band),Inconvenient for a user.the other method to use two transceiver(same
band),and working separate(one TX and another RX) on the same time,on the
same band but not same frequency.now you must to choice two freqs.they can
tune 600KHZ~10MHZ(or High)away.these radios connect to a Duplexer,there are
3 connectors on a Duplexer,your Duplexer was tuned(your freqs.) before
setting.
many brands on the market,Motorla,Kenwood,YEASU,Icom,GE,Uniden,JRC.....If
you need cheap one,you can buy Motorla GR series,GR300,GR500 etc....
a little suggestion

Huston, I've had Antenna Specialist 2meter, 2/440 and cell phone "on the glass" antennas on my car, pick-up truck and motor home and have never had one blow off at any free-way speed. I think the key is proper glass preparation according to the manufacturers instructions. I have heard of them coming off on others and in almost all those cases, it was because they had not cleaned the glass prior to installation.

I have had it done on both the Motorola Micor and Mitrek. No problem and both radios work great. The Motorola M120/GM300 radios also work great in repeater mode but you have to use seperate radios. You cvan use the Motorola repeater adapters Gr300/Gr500 but I usually mount them my own way.

Get a 5" rack mount face plate and two dash mounts. Cut two holes in your rack mount plate for the dash mounts and you have it. Both radios sit side by side while being rack mounted. It looks great too. On the M120/GM300, BE SURE to run the radios at half power. If not death for the finals are but a short time away. I also run a cooling fam on my Tx.

I would like to buy or trade for a TU-7 (I believe that's the right number) that fits the Kenwood TM2530, 2550, and 2570 2 Meter mobile rigs. This is the CTCSS encoder/decoder board. Also looking for the Voice unit and the modem. Or, if you have a junked 2530/50/70 for sale cheap that has these units installed, I would also be interested. Have test equipment, computer gear, etc for trading stock. E-mail lamar.owen@wgcr.org

Thanks and 73

Description
SELECTONE MODEL ST-807 SUB-MINATURE DTMF DECODER designed for installation in hand-held and mobile radios. The ST-807 will respond to an address of 1 to 7 digits in length of the 16 DTMF characters. For more information, the manual and application notes can be viewed or downloaded from the SELECTONE web site at: http://www.selectone.com/..... These units were removed from working radios and are like new except some leads are cut to about three inches. The operating instructions and installation manual is included.

The Code forbids just tying neutral to safety ground on the user side of the service entrance. The only way you can legally do it is to install a subpanel at the ham station. Neutral and ground can tie together in the subpanel and conform to Code. Station ground, if it is separate, can bond here too. (Note, there must be a main breaker in the subpanel. If you just use branch breakers here, Code won't allow you to bond neutral and ground together because a ground fault won't be guaranteed to blow a breaker.)

> Is it worth the effort to do this???

Some can, some can't. It depends primarily on how the local oscillators
are generated. Things like the Motorola Micor and GE Mastr II (that's
the way GE spelled it) use separate crystal oscillators for transmit and
receive. It is a simple matter to split these radios so that they can serve
as a repeater. In fact, the majority of amateur repeaters are probably made
from one or the other of those two radios, or varients like the Exec II or MVP.
These are available surplus at very reasonable prices (they were originally
used in Land Mobile service as trunk mounted mobile radios).

Many synthesized amateur transceivers only have one synthesizer.
That's switched back and forth for transmit and receive (the receive LO
has to be offset by the intermediate frequency of the receiver, usually
10.7 MHz). These radios can't be split for repeater operation unless
you somehow outboard another LO. (And you may still have isolation
problems with most ham rigs.)

Some dualbanders have dual in-band receive capability, and that
requires two synthesizers. These can probably be split, but typical
ham transceivers have such poor front ends (poor IMD response
because hams seemingly want them to cover DC to daylight) that it
isn't worth the effort to try to split them to form a repeater. You want
a good tight strong receiver for a repeater. The Micor, and especially
the Mastr II, have that, most ham rigs don't.

Note, most of the "true" dualbanders can be used for crossband
repeater service (at reduced power). That doesn't put as much
demand on isolation between transmitter and receiver as does
in-band repeating. But for a conventional in-band repeater, you
need something better.

Exec II and MVP radios go for about $50, and a Mastr II will
command about $100 (you don't need the control head or cabling
to use them as repeaters). The Mastr II will loaf along at 50 watts
(rated at 110 watts for mobile service, but you want to turn it down
for repeater duty), and the receiver is really bulletproof. There are
a lot of these radios still around, though they haven't been produced
for a while now. They seem to last forever. Our repeater group has

6 repeaters using them now, and we almost never have to go to the repeater sites to adjust or repair them. They just keep going like the Energizer Bunny.

As a final note, I wouldn't recomend trying to use a synthesized radio as a repeater in any event (even a pair of synthesized radios) because the phase noise of the synthesizers will give you fits with desense problems. Stick with crystal control for repeaters. (Some late model commercial repeaters are synthesized, but the designers took great pains to control phase noise in them. Most ham equipment designers don't.) The RF fields at typical repeater sites are *intense*. You need a very strong receiver to deal with them. These old Motorola and GE radios have that, late model ham gear doesn't.

Oris,
I would like very much to do the trade with you but I would require an additional $300 from you because your computer is very outdated and your IC 27 is a very old outdated rig. I have a Kenwood TS 530 which is basically in good shape except that it has been dropped several times and most or all of the panel controls are either bent or broken but I'm sure they can be replaced. All the sides and corners are dented but this doesn't seem to affect its performance but its hard to tell since it doesn't exactly seem to work right now. It's possible that one or more of the many beverages that have been spilled into the interior have caused this but I'm sure a good cleanup and drying out will put all back in shape again. I think we should both ship to each other on the same day. Do you agree?

Does anyone know where i can find the mod to make a TS-440SAT transmit out of band. I am going to use it with a Ten-Tec 20-meter to 6-meter converter and wanted to cover more than the 350 KHz of transmit that the '440SAT would allow.

..also, if you have experience with the Ten-Tec transverter in this regard, I'd appreciate hearing about it.

Much Thanks..Bill (at k6whp@gte.net)

2388. MFJ-1278 Help Please

Newsgroup: rec.radio.amateur.equipment
Date: 1998-11-25 00:00:00 UTC
From: Russ Cheatham <cheatham@HIWAAY.net>
Message-ID: <365C848D.C16AE517@HIWAAY.net>
Source record: 124846

My MFJ-1278 seems to have a problem with both radio ports.
When port 1 is connected to my IC-735, it takes about 2
seconds for the transmitter to come up to full power. Port
2 doesn't cause this problem. On port 2, PTT never goes to
ground when the software tells it to start transmitting.
A 9600 baud modem is on port 2. I don't have the manual
or schematics, so any help is appreciated.

Thanks,
Russ KF4WUT

I have an rlc-2 repeater controler with the doug hall whitch works with
the kenwood radios. my audio on the repeater is great no problem.
audio in equals audio out. pretty close.
I need to know how to work with the doug hall to get it sounding nice.
I have had 2 mods from the repeater and link list survers and want to
see what else people have done with the radios. I have heard of some
acutally moding the radios/rbi-1 for flat audio and using a motorola
squelch board inside the doug hall. I want to know if anyone has
anything close. it would be much appreciated.

2401. FS: 16 Channel Synthesized VHF mobile radios

Newsgroup: rec.radio.amateur.equipment
Date: 1998-11-25 00:00:00 UTC
From: wa6gsd@ix.netcom.com
Message-ID: <365C4392.1C24@ix.netcom.com>
Source record: 124859
Cross-posted to: rec.radio.swap,rec.radio.amateur.equipment

I have for sale some 16 channel synthesized VHF mobile radios..

They are very compact units (1 5/8"H X 6 7/8"W X 8 1/2"D).
They are clean units, and include a mounting bracket and DTMF
microphone (The mic functions but DTMF in inop).

These units are 16 channels, with PL programmed for each of
the channels. The radios also have the unique ability for you
to assign nine other PL's to each channel. These nine PL's
are programmed at the same time as the other data.

Unit has built in front facing speaker. Channels/PL's displayed
on large greeen LED's.

Radio model is TAC310, originally designed and sold by
RCA (TacTec). They are approximately 15 years old.

I am asking $80 + shipping, programmed and tuned to your specifications.
The radios will do 2 meter amateur band and up to 170 mhz. The
spread on tx or rx should be no more than 5 mhz.

If interested, please reply to wa6gsd@ix.netcom.com

Thanks

Steve-WA6GSD

Source record: 124935

I see you have gotten some replys that question your ability! I think that is uncalled for but probably to be expected. When you look at our licensing plan where you memorize a few questions and answers to get any ticket you never know if a ham has ever seen a radio or now. I figure we will soon be certifing brain surgeons this way soon to please the HMO insurance people.

To the resistors in your 520. I checked the manual for an 820 that I still have (same trusty tubes) and see that it also uses two 10 ohm 1 watt resistors in parallel (the cathode circuits of both tubes are connected via a jumper wire) for metering to generate the E=I*R voltage to measure the IP current. I would probably replace both 10 ohm resistors at same time because if only 1 of them had opened up it would have caused your meter to read twice the actual current.

good luck and ignore the hecklers!

Nï¿½DG

I ALMOST know this one.... I had to hunt these down once myself.

The pair of chips are something like an 8051 and a 4040, but I can't
be certain unless I dig through a pile of documentation to look for my
notes on the matter.

I hope someone else can verify this for you.

Message-ID: <01be17c2$3cbd8460$66d0a0cd@kovar.inav.net>
Source record: 124940

I have installed over 1000 of these Glass mount antennas.

They are NOT GLUE ON ANTENNAS.
They use a specific thickness double sided adhesive tape to hold them on.
The sealant is to seal the edges to keep water from ruining the adhesive
tape. Because these are capacitive coupled antennas the tape thickness
is very important to maintain.
In my experience the glass mount antennas suffer from measurable
losses when coupled threw glass.
These losses increase as the frequency decreases.
The looses are also greatly affected by any window additives that allow
blocking of the signal and or change of the dielectric value of normal
glass.
To summarize I hate them as compared to a real direct feed antenna.
I laugh at responses of people polishing there performance.
They should stick to 900Mhz as the losses are minimal.

Source record: 124947

Hard to say what they have in mind, but if they ever do add 70cm to the
746 than you'll be able to get some great deals on all the FT-847's that
will show up on the market... :)

Wouldn't hold my breath, though, unless Icom feels that they are loosing
sales of the 746 because of the lack of 70cm (which I kind of doubt)
then it wouldn't make much sense. I think Icom is trying to position the
746 as a high-quality mid-line HF radio, not one of the do-everything
wonders.

If you want one, buy one... there's no end to the 'it'll be better next
year' game...

I have given up with these antenna's. I found the 2 different types I have owned both pretty poor on 2m, but good enough on 70cms. They were also prone to falling off after about 18 months or so. They were fitted as well as I could, but I admit that the problem was that the curvature of the glass on the tailgate was such that the complete antenna pad could not sit on it. Also, the make's I had, did not have any sealant to go around the edges - and yes, I reckon water ingress coupled with the fitting problem contributed to their ability to detach.

While I don't have the schematic with me at the moment, Marty, I think that Don (N0DG) is correct. One thing that I thought about as I was considering your question, was the novice mod that could be done to the TS-520. While I have never done it, maybe, just maybe, Kenwood instructions called for removing the jumper Don refers to and therefore reducing the power output. That could account for the 2 resistors in parallel. One for each final. Just a thought, and I could be totally out to lunch on this. 73 es gd lk -- VE6INM (Glenn)

Hello
I have a ICOM 740 with built in power supply and a Dentron 160 10L linear amp. The amp uses 4 811As or 4 572Bs with 1800 V on the plate that I would like to trade the pair for a Kenwood TS 930 with antenna tunner or a Heathkit SB 220 or SB 221. I have the hand mic and operation manuels. The radio is a 8 and the amp is a 6 on a scale of 1 to 10. If you are interested drop me a note at
oris@dirtball.com.
Thankyou
Oris

2450. Re: Yaesu FT8100R vs Icom 2710H

Newsgroup: rec.radio.amateur.equipment
Date: 1998-11-25 00:00:00 UTC
From: barryng@ibm.net
Message-ID: <73hu1i$is2$1@nnrp1.dejanews.com>
Source record: 124978

I have been a loyal Icom user for seventeen years. For mobile rigs I have owned an IC-25A, IC-3200A, IC-28H, and an IC-900A. I have had so significant complaints with any of the Icom product I have owned. For reasons I do not fully understand, I recently made the mistake of purchasing a Yaesu 8100 and 8500. The 8500 is in my wife's car so I cannot offer a valid opinion about it. My wife rarely uses it because it is very difficult to learn to operate and her interest is not sufficient to spend the necessary time with it. However, I do use the 8100 (unfortunately) and I regret the day I decided not to buy the Icom dual band mobile.

The 8100 has the very annoying characteristic of breaking the squelch on the sub-band, when transmitting on the main band. It does not do this on all VHF-UHF frequency combinations but it does it for far too many. None of my Icom rigs ever did this and they were all programmed with the same repeaters. I originally thought that this was simply a malfunction but Yaesu technical support told me that it is normal and to just turn the squelch up. Turning the squelch up means taking it almost to its full clockwise position.

It makes no sense to have a dual band rig and have to operate it with the volume turned down on the sub-band or the squelch adjusted so none but the strongest repeaters break it. Icom completely mutes the sub-band when transmitting on the main band, a practice which makes a lot of sense. Yaesu only partially mutes the sub-band and then only if that feature is selected. It is very distracting to transmit and hear a loud grating noise on the sub-band, albeit at a reduced volume level.

The Icom products are also much more intuitive to operate. Bluntly, I do not reccommend the 8100.
